GEAR UP (Gaining Early Awareness and Readiness for Undergraduate Programs) is a federally funded program aimed at encouraging disadvantaged middle and high school students to have high expectations, stay in school, and take college preparatory courses. The West Virginia Department of Education received funding to conduct the program in eight rural southwestern counties. Baseline information on incoming seventh-grade students' and parents' attitudes and aspirations toward postsecondary education was gathered from 5,645 student and parent surveys from 25 middle schools in the 8-county region. Students reported doing well in English, math, science, and history. About half felt they needed help with a specific subject, usually math. Less than half expressed interest in after-school tutoring, but over two-thirds were interested in having a mentor. Parent involvement in school activities was limited, especially for fathers. Students indicated feeling confident and responsible for their own learning, but did not view their learning as interesting or exciting and did not feel that teachers valued their thoughts or that they were given many opportunities for exploration. Students' aspirations for postsecondary education were less than their parents' aspirations for them. Students seemed to understand what is required to prepare for college, but few reported planning to take higher-level high school courses. Parents and students perceived financial difficulties to be the greatest deterrent to postsecondary education, but students were more optimistic about their abilities to afford such education than were their parents. Seven recommendations are presented. (Contains 20 references and survey questionnaires.) (TD)

AEL is a catalyst for schools and communities to build lifelong learning systems that harness resources, research, and practical wisdom. AEL serves as the Regional Educational Laboratory for Kentucky, Tennessee, Virginia, and West Virginia. For these same four states, it operates the Eisenhower Regional Consortium for Mathematics and Science Education. The Region IV Comprehensive Center at AEL serves North and South Carolina in addition to these states. AEL also operates the ERIC Clearinghouse on Rural Education and Small Schools.

Information about AEL projects, programs, and services is available by writing or calling AEL.

EXECUTIVE SUMMARY

In 1999, the U.S. Department of Education funded 21 state and 164 college and middle school partnership grants for Project GEAR UP (Gaining Early Awareness and Readiness for Undergraduate Programs). These grants focused on encouraging disadvantaged youth to have high expectations, stay in school, and take academically rigorous courses to prepare them for college. A second round of funding awards was granted in 2000, with GEAR UP monies allotted to 7 state departments of education and 73 partnerships.

The 2000 West Virginia Department of Education (WVDE) five-year partnership grant includes early intervention, partnership, and scholarship components for its mostly rural constituents in southwest West Virginia. Collaborating agencies include eight county boards of education (Clay, Hampshire, Lincoln, Mason, McDowell, Monroe, Pocahontas, and Roane) and a number of state, business, and organizational partners. The grant initially funds academic and support services for seventh-grade students and their parents and tracks those students through the following four years. In addition, a new pool of seventh graders is added each successive year. Typical activities may include tutoring, mentoring and counseling, after-school and weekend activities, summer camps, financial planning and college awareness sessions for parents, educational classes for parents, development and use of curriculum guides, staff development and training, development and use of support equipment and motivational materials, and internships.

As part of its GEAR UP grant, WVDE contracted with AEL, Inc., to administer and analyze surveys to gather baseline information on incoming seventh-grade students’ and parents’ awareness and perceptions of, interest in, and aspirations for students’ postsecondary education. This report summarizes findings from the first administration of the surveys in January/February 2001 at 25 middle schools within the eight-county region. The main objectives are to analyze and summarize regional GEAR UP baseline survey data.

Three surveys were used for data collection—two different student surveys and one parent survey (one copy for mothers and one copy for fathers). One student survey and the parent survey were modified from drafts provided by the federal funding agency, while the second student survey was developed by AEL in collaboration with another GEAR UP grantee, Fairmont State College (FSC). These surveys were modified based on findings from the first-year administration in the FSC service area. The AEL/FSC student survey contained 64 items, the federal student survey contained 27 items, and the federal parent survey contained 36 items, all with both selected-response and open-ended items. To assess the degree to which items measure the same construct (internal consistency), Cronbach Alpha reliability estimates were computed for this set of respondent scores: the AEL/FSC student survey coefficient was .91, the federal student survey coefficient was .64, the federal parent survey coefficient for mothers was .81, and the federal parent survey coefficient for fathers was .78.
Surveys were provided to school staff to distribute to students and parents. A total of 1,900 surveys were distributed. Completed surveys were returned by the schools to AEL for data entry and analysis. Response rates varied by type of survey. A total of 1,642 usable AEL/FSC student surveys were received (86% return rate), while 1,643 federal student surveys were received (87% return rate). Parental participation rates are estimates only, based on the assumption that each student has both a male and female parent or guardian: 1,315 mother surveys were received (69% return rate) and 1,045 father surveys were received (55% return rate).

In order to provide timely data to West Virginia staff for finalizing GEAR UP activities, preliminary findings were provided in April 2001; data analyses and summarization were completed in June 2001. Findings are presented for the regional overview by type of survey and include narrative text, 3 tables, and 11 figures. Some of the key conclusions and recommendations follow.

Conclusions

- In general, students report doing well in English, math, science, and history. For those not doing well, their most frequent explanations are that they have a grade of C or D or that they don’t do well on tests. About half of the students believe they need help with a specific subject, most often math. Students seem somewhat ambivalent about tutoring as a means to improve their performance, with less than half expressing interest in an after-school tutoring program. On the other hand, over two thirds are interested in having a mentor.

- Parent involvement in school-based activities seems to be limited in scope, especially for fathers. About a fourth of mothers and fathers report that they occasionally or frequently meet with their child’s teachers. Roughly a third of mothers report never meeting with their child’s teacher, whereas more than half of fathers report this. Further, about two thirds of the mothers and half of the fathers report they occasionally or frequently attend activities at their child's school.

- Students report being well supported in the areas of confidence to take action, sense of accomplishment, and leadership and responsibility. They report feeling less well supported in fun and excitement, belonging, and curiosity and creativity. In other words, while students indicate feeling confident and responsible for their own learning, they do not seem to view their learning as particularly interesting or exciting, do not feel that teachers especially value their thoughts or feelings, and do not feel that they are given many opportunities for exploration or investigation.

- Overall, students’ aspirations for themselves in terms of their postsecondary education were somewhat less than perceptions of their parents’ aspirations for them. Whereas less than half expect to obtain at least a bachelor degree, nearly three fourths report that their parents expect them to do so (mothers more so than fathers). Parents seem to verify this, with more than three fourths of the mothers and fathers reporting that they would like their child to achieve at least a bachelor degree.
Students seem to have some understanding of what is required of them now to begin preparing for college. More than half report that they know which courses are needed to adequately prepare them. However, few students report planning to enroll in various higher level high school courses. Only about half plan to take chemistry or physics; only about a fourth plan to take calculus or trigonometry.

Both parents and students perceive financial difficulties to be the greatest deterrent to postsecondary education. While more than half of the parents report that they are aware of the various types of available financial aid, only about a third believe their child will qualify for such aid. Interestingly, students are somewhat more optimistic about their abilities to afford education following high school. Whereas only about a third of parents think their child probably or definitely will be able to afford college, more than half of students believe this to be the case.

Recommendations

• Establish tutoring and mentoring programs and encourage student participation in such programs.

• Emphasize the importance of taking more challenging college-preparatory courses and encourage more students to plan on taking higher level academic courses, especially calculus and trigonometry, to better prepare them for postsecondary education.

• Provide students and parents with information about degree requirements for various career choices.

• Provide students and parents with information about and entrance requirements for both two- and four-year colleges, as well as for vocational and business schools.

• Provide students and parents with information about and requirements for various financial aid sources for financing postsecondary education.

• Work to find ways to increase parents’ involvement in the academic lives of their children, beyond occasionally meeting with teachers or attending school activities.

• Begin focusing efforts to bring more of a sense of excitement and creativity to the educational experience in order to better capture students’ interest and pique their inquisitiveness and curiosity for new discoveries. Further, work to build a stronger connection among students, teachers, and administrators to foster a more supportive environment for students.
INTRODUCTION

GEAR UP Description

In August 1999, President Clinton announced $120 million in GEAR UP (Gaining Early Awareness and Readiness for Undergraduate Programs) grants to 21 states and 164 partnerships of colleges and middle schools across the country (Office of the Press Secretary, 1999). Another $45 million in new grants were awarded in 2000 to 7 states and 73 partnerships (Office of the Press Secretary, 2000). These U. S. Department of Education-funded grants were to encourage disadvantaged youth to have high expectations, to stay in school, and to take academically rigorous courses to prepare them for college. GEAR UP differs from other federal programs in that it

- begins no later than the seventh grade to help ensure that students take appropriate college preparatory courses and follows them through high school

- transforms schools by working with entire grades of students (cohort or whole-grade approach) to provide a comprehensive array of services including mentoring, tutoring, counseling, strengthening the curriculum, professional development for teachers and staff, parent involvement, after-school programs, summer academic and enrichment programs, and college visits

- leverages local resources by encouraging colleges to partner with low-income middle schools and leverages nonfederal resources with a 1-for-1 match requirement

- provides college scholarships and 21st Century Scholar Certificates (early notification of students' eligibility for financial aid)

- bolsters state efforts by supporting early college preparation programs (Office of the Press Secretary, 1999)

West Virginia Department of Education GEAR UP Grant

In 2000, the U. S. Department of Education awarded the West Virginia Department of Education (WVDE) $10 million over the next five years to implement GEAR UP in eight county school districts. Students in a total of 34 elementary, middle, and high schools are to be served via this grant.

The WVDE five-year partnership grant includes early intervention, partnership, and scholarship components for its mostly rural constituents in southwest West Virginia. Collaborating agencies include eight county boards of education (Clay, Hampshire, Lincoln, Mason, McDowell, Monroe, Pocahontas, and Roane) and a number of state, higher education, business, and organizational partners. All 55 of West Virginia's counties have been classified as Appalachia by the Appalachian Regional Commission (2000).
The WVDE GEAR UP proposes to support students via

- early intervention through tutoring and mentoring that will provide opportunities for more students to attend college and succeed
- concerted efforts of parents, schools, and community that will provide more students with the personal support needed to succeed
- early parental involvement in career and educational planning resulting in more students being prepared to attend and succeed in post high school educational programs
- early awareness of scholarship opportunities, student loans, and other financial information that will lead to greater numbers of students extending their educations
- academically challenging courses in middle and high schools that will better prepare students for college or technical schools (WVDE, 2001)

**Purpose and Objectives of Study**

As part of its scope of work in the GEAR UP grant, WVDE contracted with AEL, Inc., to administer and analyze student and parent surveys to gather baseline information on incoming seventh-grade students’ and parents’ awareness and perceptions of, interest in, and aspirations for students’ postsecondary education. This report summarizes findings from the first administration of the surveys in January/February 2001 at 25 middle schools within the eight-county region. The main objectives are to analyze and summarize regional GEAR UP baseline survey data. The primary audiences are WVDE staff and GEAR UP funders. Secondary audiences include West Virginia GEAR UP partners, AEL staff, and others interested in student and parent aspirations.

**Review of Literature**

Student aspirations extend far beyond individual dreams or ambitions. Aspirations encompass individual and family educational goals, career choices, and self-concept. Quaglia and Perry (1993, p. 2) define aspirations as being composed of two components: inspiration and ambitions. “Ambitions represents an individual’s ability to look ahead and invest in the future. Inspiration can be described as the individual’s ability to invest the time, energy, and effort presently to reach their ambitions.” (For a historical perspective on the aspirations construct, see Quaglia and Cobb’s 1996 “Toward a Theory of Student Aspirations,” *Journal of Research in Rural Education, 12*[3], 127-132.)
Researchers at the University of Maine’s National Center for Student Aspirations have identified eight conditions that support high levels of aspirations in youth: achievement, belonging, curiosity, empowerment, excitement, mentoring, risk taking, and self-confidence (Plucker & Quaglia, 1998). The authors state that these conditions “provide an interpretive template that frames how students can be viewed and how schools can positively support . . . the development of student aspirations” (p. 253). Further research at the University’s College of Education and Human Development resulted in modifications to the eight factors related to student aspirations. These eight conditions, which “emphasize the importance of putting the students at the center of any school initiative or program” (University of Maine, 1999a, p. 1), include

- **Belonging**: A relationship between two or more individuals characterized by a sense of connection, support, and community
- **Heroes**: People whom children admire and imitate because of their personal talents
- **Sense of Accomplishment**: In addition to academic success, recognizes effort, perseverance, and citizenship as important signs of children’s success
- **Fun and Excitement**: Involves being interested in something, being emotionally involved, or having an intense experience or desire of some kind
- **Spirit of Adventure**: Characterized as a child’s ability to take on positive, healthy challenges
- **Curiosity and Creativity**: Characterized as inquisitiveness, eagerness, a strong desire to learn new or interesting things, and a desire to satisfy the mind with new discoveries
- **Leadership and Responsibility**: Children’s sense of control and responsibility for their actions and words
- **Confidence to Take Action**: The extent to which children believe in themselves and is related to self-regard, self-esteem, self-worth, and self-respect

Adolescence is characterized by emotional, physical, cognitive, and social transformations. As patterns of thoughts or choices emerge, youth begin to gain a picture of “who they are,” which is essential for school to have meaning and purpose. Schools can help facilitate that transformation by providing an environment conducive for students to learn how to usefully and productively manage their time, energy, and efforts in ways that are meaningful to them for the future and yet enjoyable to them in the present (Quaglia & Perry, 1993). Educators can try to influence aspirations with inspiration, realism, and respect (Sizer, 1996). Schools can achieve this, according to Sizer, by attracting “interesting” staff with aspirations of their own, keeping schools small to allow more than casual interactions, making time for students to pursue interests, providing “aspirer” models from the community, and being flexible. He notes, “Expect every youngster to have a worthy
passion of some sort. Work at it, make it a priority, speak about it, make exceptions for it” (p. 126). Quaglia and Cobb (1996) state that youth are pressured toward uniformity by social groups and suggest that schools combat this mind-set by fostering an environment that encourages diversity, excellence, and risk taking among students.

Cobb, McIntire, and Pratt (as cited in Quaglia & Perry, 1993) report that rural youth believe that their parents are more supportive of them taking full-time jobs, attending vocational schools, or joining the service rather than going to college. In addition, Walberg and Greenberg (1996) note that rural youth also face economic decline, limited work opportunities, and increased isolation. Yet youth are a rural community’s greatest asset. When youth migrate from their hometowns, rural communities suffer a loss of talent and vitality crucial to the development or maintenance of a desirable future for these communities (Ley, Nelson, & Beltyukova, 1996). Factors affecting out-migration include limited economic opportunities, lack of faith in a community to sustain favorable economic conditions, and a willingness of rural youth to look elsewhere. All of these factors, combined with overall lower aspirations for postsecondary education, make it more difficult for rural youth to achieve career and economic success within West Virginia.

Howley, Harmon, and Leopold (1996) note that educators and community leaders believe that rural youth are becoming less involved in their hometown communities—this disengagement may reinforce students’ inclination to migrate elsewhere. The trick is to encourage and facilitate the development of rural students’ aspirations and, at the same time, transform local communities into appealing places where young adults can prosper and grow while contributing to the quality of rural life.

According to Kampits (1996), rural youth have significantly higher graduation rates from high school than urban youth, yet they are less likely to pursue college degrees and are less likely to graduate from high school with firm plans for the future. In addition, low-income youth are less likely than more affluent youth to enroll in more demanding college-preparatory courses. She challenges educators to focus on the needs of the students:

Regardless of high expectations—even regulations—that students will learn and demonstrate specific knowledge and understanding, first they must want to learn, be inspired to learn, and understand why they should learn. In short, they must be full partners, not just subjects, in the learning process. (Kampits, 1996, p. 176)
METHODS

Instrumentation

In July 2000, AEL staff revised student and parent surveys developed for the Fairmont State College (FSC) GEAR UP grant (Cowley, 2001). Revisions were based on data obtained from the first-year Fairmont surveys. Such revisions included clarifying item stems and response options and adding more selected-response options derived from analyses of the most-frequently mentioned open-ended comments.

**AEL/FSC student survey.** This survey contained 64 items utilizing a variety of response options, mainly selected-response with only minimal open-ended items (for “other” descriptions). Students were asked demographic questions related to their families; questions about job aspirations and current classes; and yes/no questions about school participation, computer usage, and plans for taking specific courses in the future. Students were asked to rate their level of agreement (Strongly Disagree to Strongly Agree) for 10 items related to current perceptions and plans for life after high school. In addition, per a recommendation from the first-year Fairmont report, 28 items from the University of Maine’s *Students Speak* survey were added to capture data on the eight components related to aspirations (belonging, heroes, sense of accomplishment, fun and excitement, spirit of adventure, curiosity and creativity, leadership and responsibility, and confidence to take action) (University of Maine, 1999a). Students were asked to rate their level of agreement (Strongly Disagree to Strongly Agree) for these 28 items. For analysis purposes, the eight components formed eight separate subscales (see Table 1 for a listing of the items that comprise each subscale). Since each subscale had a different number of items, subscale means (total subscale score divided by number of items in the subscale) were used to enable cross-subscale comparisons.

Face validity of survey items was assumed by project staff, given their need for data on specific topics addressed in this survey, which was developed by Fairmont State College and AEL staff. To assess the degree to which items measure the same construct (internal consistency), Cronbach Alpha reliability estimates were computed for this set of respondent scores for the region using interval and ordinal items, excluding demographic items. With a Cronbach Alpha of .91, the survey responses were highly reliable. At the subscale level, the coefficients ranged from .47 to .80 and were very similar to those obtained by the University of Maine researchers (1999b). See Table 1 for subscale reliability coefficients.

**Federal student survey.** This survey contained 27 items utilizing a variety of response options, mainly selected-response with only minimal open-ended items (for “other” descriptions). Students were asked to respond to items pertaining to school and school work, plans for the future, knowledge about college, their family, and background information. The last section (6 items on the last page of the survey) asked about their participation in GEAR UP; this section was omitted since no activities had been conducted to date for this group of seventh graders and their parents.

</table>
This survey was drafted by the federal funding agency and its use strongly recommended to GEAR UP grantees (AEL staff reformatted the survey and made slight modifications for consistency within survey responses). To assess the degree to which items measure the same construct, Cronbach Alpha reliability estimates were computed for this set of respondent scores for the region (using ordinal items, excluding demographic items), resulting in a coefficient of .64.

**Federal parent survey.** This survey contained 36 items utilizing a variety of response options, mainly selected-response with only minimal open-ended items (for “other” descriptions). Parents were asked to respond to items pertaining to their child, knowledge about college, and background information. The last section (8 items on the last page) asked about their participation in GEAR UP; this section was omitted since no activities had been conducted to date for this group of seventh graders and their parents.

This survey was drafted by the federal funding agency and its use strongly recommended to GEAR UP grantees (AEL staff reformatted the survey and made slight modifications for consistency within survey responses). To assess the degree to which items measure the same construct, Cronbach Alpha reliability estimates were computed for both mother and father respondent scores for the region (using interval and ordinal items, excluding demographic items). For the mother scores, the coefficient was deemed satisfactory for this type of instrument at .81. The coefficient for the father scores was similar at .78.

**Coding sheet.** To keep respondents’ identity anonymous in the analysis phase, each student was assigned a unique code number. Coding was done at the school level, usually by the teachers. A Student Demographic Cover Page was completed for each student and included information about the student and parents. Identification codes included the student’s Social Security, a two-digit county code, and a two-digit school code. By including these codes on all surveys, it is possible to compare an individual’s responses across surveys throughout the five-year period, as well as link parent and student responses.

**Data Collection**

The three surveys described above were utilized to gather baseline data from seventh-grade students and their parents from the 25 participating middle schools in the eight-county region. Students were provided with one survey packet each. In December 2000, AEL staff provided survey masters to WVDE staff, who then photocopied the final surveys and assembled student packets to be distributed to school staff. Packets contained a one-page demographic cover page printed on goldenrod paper, a two-page (front/back) AEL/FSC student survey printed on green paper, a two-page (front/back) federal student survey printed on yellow paper, and two copies of the two-page (front/back) federal parent survey (one copy printed on pink paper for mothers and one copy printed on blue paper for fathers). Each participating school received an appropriate number of student packets, as well as envelopes for returning the completed surveys to AEL. In January/February 2001, surveys were distributed to 1,900 seventh-grade students in participating schools by school staff.
Teachers were instructed to complete the demographic cover page, transfer the corresponding identification number to all four surveys, and then remove the cover page before distributing the packets to students. The cover pages were to be collected and sent to WVDE staff. Students were given time during a class period to complete both of their surveys and were instructed to take the parent surveys home for their parents to complete and then return them to their teacher. After surveys for a school were completed and returned, a staff member packaged the materials in the envelopes provided and mailed them to AEL.

While no specific deadline was given for returning the completed surveys, school staff were urged to administer them as soon as feasible so that planning for GEAR UP activities could be finalized and project implementation could begin. All 25 middle schools returned their surveys by mid-April 2001. See Appendix A for a completed SEDCAR Standards Checklist, which documents the data collection methods used in this project (Cooperative Education Data Collection and Reporting Standards Task Force, 1991).

Data Analyses

Databases were created using SPSS Windows for each of the surveys and temporary staff were hired and trained by AEL staff to enter the data. Data were entered by school into each of the four databases and stored both on disk and hard drive. As each set of data was entered, spot-checks were completed by staff to ensure accuracy. Further, preliminary analyses were run to aid staff in cleaning the data files. Ultimately, data analyses were conducted for the eight-county region by survey.

Response rates varied by survey. A total of 1,642 AEL/FSC student surveys were received (86% return rate), while 1,643 federal student surveys were received (87% return rate). As expected, parent participation was somewhat lower. A total of 1,315 surveys were received from students' mothers (69% return rate, if one assumes that all students have either a mother or some female guardian such as grandmother or stepmother, which is not ascertainable). A total of 1,045 surveys were received from students' fathers (55% return rate, making the same assumption about male caregivers). Therefore, response rates for parents should be viewed only as estimates of the population. See Table 2 for a breakdown of respondents by county and survey.

In order to provide timely data to WVDE staff, preliminary findings were provided in April 2001 and data analyses and summarization were completed in June 2001. School-specific, county-specific, and regional summaries were prepared on survey facsimiles, with response percentages printed in red ink to aid readability. In June, the following materials were transmitted to WVDE staff: a complete set of the school, county, and regional summaries for WVDE use; county-specific summaries for sharing with the county coordinators; and school-specific summaries for sharing with the principals from the participating schools. See Appendix B for a copy of the regional summary by survey.

FINDINGS

This section presents findings from administering the surveys to seventh-grade students and their parents in the participating schools within the WVDE GEAR UP area. Findings are presented by survey for the eight-county region.

AEL/FSC Student Survey

A total of 1,642 students responded to this survey. However, due to missing data (skipped items), the number of respondents changes from item to item and is not reported.

Almost half of the student respondents reported having one brother (40%), followed by no brother (30%), and two brothers (19%). The remaining 11% reported having three or more brothers. Similarly, 37% of the students reported having one sister, 32% indicated having no sister, and 18% reported two sisters. The remaining 12% reported having three or more sisters. Thirty-eight percent of the students reported that four people lived in their home, followed by 24% with five members, and 18% with three. The minimum number reported was 2 (5%), the maximum was 15 (<1%).

Students were asked what they wanted to be when they grew up. The most common responses were athlete (13%), doctor (8%), veterinarian (7%), and lawyer (6%); 10% were undecided and 16% indicated other occupations not identified on the survey.

Students were asked how many hours they spent on homework each day for specific subjects (English, science, math, history/social studies, and other subjects combined). For each subject, approximately half of the students reported spending roughly one hour per day per subject, with between a fourth and a third reporting no homework. For all subjects, between 1% and 11% reported spending two or more hours per day, and between 2% and 4% reported not taking specific subjects.

Eighty-two percent thought that their parents wanted them to go to college, 16% were not sure, and only 3% responded negatively. Seventy-five percent of the students indicated that they wanted to attend college, 17% were not sure, and 8% did not want to attend. Of those who did not want to attend college, 31% said that college was not important, 24% said that they did not have the money, 21% said that their grades were not good enough, and the remaining 23% provided some other explanation (such as not needing college for their chosen occupation or just not interested in

---

1Three respondents (<1%) indicated that none or only one person lived in their home; it is not clear whether these students were trying to indicate that they lived with someone else (not in their own home) or if they responded incorrectly to the prompt.

2Percentages may not add up to 100% due to rounding.
consistent with the current trend of outward migration of rural youth, less than half of the students indicated that they planned to be living in (44%) or working in (40%) West Virginia by the time they were 30.

When asked how they were doing in particular subjects, students' responses were fairly similar across subjects: 62% indicated that they were doing well in math, 65% in English, 62% in science, and 64% in history. For those who indicated that they were not doing well in these subjects, their most frequent explanations were identical for each subject, and had very similar percentages: have a grade of C or D (59%, 55%, 57%, and 58%, respectively) and don't do well on tests (36%, 26%, 32%, and 30% respectively). Whereas 28% reported that they were doing badly in math because they do not understand the subject, about a fourth attributed their difficulties to not studying hard enough in English (26%), science (25%), and history (28%).

Interestingly, although 71% thought that they had good study skills and approximately two thirds indicated that they were doing well in the four subjects mentioned above, more than half (56%) indicated a need for help with some classes. The most frequently mentioned subject was math (54%), followed by science (38%), English (36%), social studies (27%), and history (18%); only 9% mentioned some other subject such as reading or spelling (see Figure 1). Only 40% expressed an interest in attending an after-school tutoring or helping program, yet 67% were interested in a mentor/buddy. Further, students' impressions of their ability to go to college were quite high, with 90% responding affirmatively.

![Figure 1: Students' Perceptions of Classes in Which They Need Help](image-url)
Participation in school activities varied widely, with 64% indicating participation in sports, 41% in clubs, and 16% in student government. Students identified their most favorite class as gym/physical education (39%), math (20%), science (12%), English (10%), or history (10%); only 10% suggested additional subjects such as reading, band, art, or spelling (see Figure 2). When asked to explain their responses, students indicated that these classes were fun or cool (56%), that they liked the subject (44%) or the teacher (41%), that the subject was easy to understand (41%), that they liked the hands-on activities (25%), or felt the class was challenging (24%). Seven percent cited other idiosyncratic reasons for their preferences.

![Figure 2: Favorite Classes as Identified by Students](image)

Seventy percent of the students reported having used a computer for either homework or school projects, and 75% have already taken a computer class at school. Further, 69% reported having a computer at home, with 78% of these students having Internet access at home. Sixty-six percent reported that their parents used a computer as well.

Students were asked if they planned on taking several advanced-level courses either before or during high school. Positive responses included 63% for a foreign language, 60% for algebra, 55% for chemistry, 43% for physics, 29% for trigonometry, and 27% for calculus (see Figure 3).
Students were asked to rate their level of agreement with 10 items related to plans after high school. Item 28 (I want to make some money immediately after high school) received the highest level of agreement (79%). This was followed by Item 31 (77%), continuing education after high school might help students make career decisions; and Item 29 (68%), students plan to continue their education regardless of their career plans. While these levels of agreement might seem contrary, i.e., the emphasis on making money versus continuing education, students may have been referring to summer employment immediately after high school or simply may not have solved the money versus schooling dilemma. Another possible explanation might be that students feel the need to continue their education and earn money while doing so. Students may also plan to work for a year or two after high school in order to pay for college.

Only 16% of students reported that they would not be able to afford to continue their education following high school (Item 35), and only 20% thought that they would be able to secure a satisfying job without further education beyond high school (Item 30). More than a third (37%) agreed that the opinions and plans of friends helped them make decisions about what to do after completing high school (Item 33). Nearly half of respondents (46%) felt that getting a job right after high school might help them decide what to do (Item 34), and 54% reported that they were anxious to begin working in their career as soon as possible after high school (Item 32). About two thirds of students reported that they needed more education or training after school to get a satisfying job (63%, Item 27), and that the opinions and plans of family members help them make decisions for after high school (66%, Item 36).
Finally, the AEL/FSC student survey contained 28 items adapted from the National Center for Student Aspirations from the University of Maine's *Students Speak* survey. These items comprise eight subscales of Belonging, Heroes, Sense of Accomplishment, Fun and Excitement, Spirit of Adventure, Curiosity and Creativity, Leadership and Responsibility, and Confidence to Take Action. In order to give an overall sense of agreement, Figure 4 shows the level of agreement (agree or strongly agree) for each of the 28 items grouped by subscale. In looking at individual items, students reported most agreement with the beliefs that they can always improve (88%) and that anyone can succeed if they work hard enough (87%). They least agreed that they were positive role models to other students (39%), that they were usually not bored in school (44%), and that teachers value their opinions (44%).

All eight subscales had mean averages ranging within a 1-point spread of 3.23 for the Fun and Excitement subscale to 4.17 for the Confidence to Take Action subscale on the 5-point scale of 1 = Strongly Disagree and 5 = Strongly Agree. Standard deviations for six of the subscales ranged from only 0.67 to 0.77. However, the Fun and Excitement subscale had a high standard deviation of 0.98, as did the Belonging subscale at 0.90, indicating more variance among respondents’ scores for items within these subscales. See Table 3 for descriptive statistics.

Federal Student Survey

A total of 1,643 students responded to this survey. However, due to missing data (skipped items), the number of respondents changes from item to item and is not reported. The students were divided evenly by gender, with 51% male and 49% female. Nearly half were born in 1988 (49%) and 39% were born in 1987. Eighty-eight percent indicated that they were White, 2% American Indian or Alaska Native, 4% Black or African American, 1% Hispanic, and 5% Other. Most frequently written-in responses for the Other category were some combination of biracial or multiracial classifications. Somewhat more than a quarter of the students (29%) indicated their mother attended college or obtained a degree. About a fourth reported the same for their father (24%) or grandparent (20%).

By far, students most frequently turned to a parent or guardian for help with homework, as indicated by 90% agreement. Other usual sources of help included a classmate or friend (64%), a teacher (53%), a brother or sister (43%), or another adult (36%). Less frequent sources included GEAR UP tutors or mentors (which is reasonable since GEAR UP activities had not started at the time the baseline surveys were administered) or some other individual.

Only about a third of the students (35%) perceived themselves as either working harder than other students (25%) or much harder (10%). About half (51%) indicated they worked about the same as other students. Eleven percent indicated they did not work as hard as other students; 3% indicated that other students worked much harder. Also, 58% classified themselves as good students, 18% as excellent, 22% as fair, and 2% as poor students.
Students were asked to indicate how important others' thoughts were relative to their decisions about education. Rated most frequently as very important were parent (87%), teacher (55%), and principal (45%). Between about a quarter and a third of the students rated each of the other six categories as very important. More than half of students (56%) reported that the perspectives of GEAR UP staff were not important (again, this is not unexpected since the GEAR UP project had not started at the time baseline surveys were administered). See Figure 5 for a graphical portrayal of whom students thought were very important in helping them make decisions.

![Figure 5: Students' Perceptions of People Who are Very Important to Their Educational Decision Making](image)

Overwhelmingly, most students (92%) were getting information about choices after high school from their parents, followed by teachers (70%) and friends (53%). Less frequent information sources (40% or less) included siblings, principals, guidance counselors, religious leaders, GEAR UP staff, or others (such as grandparents or other family members). See Figure 6 for a graphical portrayal of from whom students were most likely to get such information.
Students were asked what level of education they thought they would achieve and what their parents wanted them to achieve. Students most frequently indicated that they did not know what education level they would achieve (49%); 30% believed they would obtain a graduate degree and 13% a bachelor degree. Fifty-four percent believed that their mothers wanted them to get a graduate degree and 15% a bachelor degree. Similarly, 46% believed their fathers wanted them to achieve a graduate degree and 18% a bachelor degree. See Figure 7 for a graphical portrayal of students' expectations and their perceptions of their parents' expectations.

Seventy-two percent of the students believed that they would continue their education after high school, 4% said they would not, and 24% were not sure. When asked why they would not continue their education, more than a third of the students (36%) indicated that expense was the main reason. Relatedly, when asked if they would be able to afford to attend college, only 16% definitely agreed and about a third each said they probably could afford college (38%) or were not sure (32%). The average (median) estimate for currently attending an in-state four-year public college for one year was $8,000.
Only 27% of the students have talked with a school counselor about college entrance requirements and 45% have discussed academic requirements with an adult at home. Eighty-three percent indicated that they have heard of four-year colleges or universities and 67% each indicated they have heard of two-year or community colleges and vocational or business schools. About half of the students (58%) were aware of what courses they should take to prepare them for college.

Three fourths (79%) of the students indicated that postsecondary education was very important, 12% said it was somewhat important, 2% said it was not important, and 7% did not know. Further, 87% agreed that college graduates earn more money than those without a degree.
Federal Parent Survey

A total of 1,315 mothers and 1,045 fathers responded to this survey. However, due to missing data (skipped items), the number of respondents changes from item to item and is not reported. For the mothers' responses, 99% indicated that they were either the mother or female guardian; other responses included grandmother or stepmother. For the fathers' responses, 98% indicated that they were either the father or male guardian; other responses included stepfather and grandfather.

For both groups, the most frequently obtained level of education was high school (57% mothers, 56% fathers). Mothers also reported less than high school (11%), certificate (11%), associate (7%), bachelor (6%), and graduate (7%). Fathers also reported less than high school (18%), certificate (7%), associate (4%), bachelor (6%), and graduate (8%). Eighty-four percent of the mothers reported that another adult lived in their home, as did 91% of the fathers. Ten percent of both mothers and fathers reported that someone in their home was currently attending college. Sixty-six percent of the mothers and 68% of the fathers reported that they have a computer in their home.

Ninety-five percent of the mothers indicated that they were White. Two percent identified themselves as American Indian or Alaska Native, and two percent as Black or African American. Ninety-six percent of the fathers indicated that they were White. Two percent identified themselves as Black or African American, and one percent as American Indian or Alaska Native. One percent of both mothers and fathers selected Other.

Parents were asked to estimate how many hours each day their child spent on homework for specific subjects; responses between mothers and fathers were very similar. About half of the mothers estimated their child spent about one hour per day each for English (53%), science (52%), math (59%), history/social studies (52%), and all other subjects combined (47%). Likewise, approximately half of the fathers estimated their child spent one hour per day for each of the same subjects (48%, 46%, 55%, 46%, and 43%, respectively). Between 8% and 15% of mothers indicated they didn't know how much time their child spent per day doing homework. Between 14% and 20% of fathers reported that they didn't know how much time their child spent each day completing homework. Approximately 1% of both groups indicated their child did not have homework.

Parents were then asked how often each week they helped their child with homework in English, science, math, history/social studies, and all other subjects combined. More variance was noted here between parents, with a higher percentage of mothers indicating that they helped their child with homework either frequently (about 20% mothers and 10% fathers) or every day (about 10% mothers and 5% fathers), and a slightly higher percentage of fathers indicating they never helped (about 30% fathers and 25% mothers). Approximately 50% of both mothers and fathers indicated that they occasionally helped their child with each of the specific subjects.

Parents' views about how hard they believed their child works in school were similar. Forty-eight percent of the mothers and 51% of the fathers indicated that their child worked harder than other students and 12% of each group indicated much harder. Respectively, 36% and 33% of the mothers and fathers felt that their child did not work as hard as others; 5% of mothers and 4% of fathers perceived that other students worked much harder. Also, 48% and 51% of the mothers and
fathers, respectively, classified their child as a good student; 23% of the mothers and 24% of the fathers said their child was excellent. A quarter of mothers (25%) and 22% of fathers felt that their child was a fair student; only 4% of mothers and 3% of fathers said their child was a poor student.

Only 26% of the mothers and 20% of the fathers indicated that they had talked with someone at their child’s school about the courses or grades needed for high school graduation. Further, only 40% of mothers and 42% of fathers felt they had enough information about high school graduation requirements.

Only about a quarter of the mothers (27%) and 17% of the fathers reported occasionally or frequently meeting with their child’s teachers to discuss their child’s academic progress. Almost half of the mothers (42%) and a third of the fathers (32%) indicated they met once or a few times. Thirty-one percent of the mothers said they never met with their child’s teacher, compared to 51% of the fathers.

About a quarter of the mothers (28%) and fathers (21%) indicated they frequently attended activities at their child’s school, while about a third (38% mothers, 34% fathers) indicated they occasionally attended. A third of the mothers (34%) reported they seldom or never attended such activities, compared to 45% of the fathers.

About two-thirds of the mothers and fathers (66% and 68%, respectively) reported that they were satisfied with the education that their child was receiving, while 13% of the mothers and 11% of the fathers felt very satisfied. Twenty-one percent of both mothers and fathers indicated they were either dissatisfied or very dissatisfied.

Only 13% of the mothers and 11% of the fathers reported that they had already talked with someone at their child’s school about the courses and grades required to get into college. Ninety percent of the mothers and 82% of the fathers reported that they had already talked with their child about attending college. About a third of both mothers and fathers indicated they were familiar with the entrance requirements for two-year colleges, four-year colleges, and vocational schools.

When asked who provided their child with information about options for continuing education after high school, 96% of the mothers and 91% of the fathers indicated that they provided such information. More than 75% of the parents indicated that some other adult at home (84% mothers, 89% fathers) or a teacher at school (78% mothers, 77% fathers) also provided such information. See Figure 8 for percentages of other most frequent providers of such information.
Figure 8: Parents’ Perceptions of People Who Provide Educational Information to Their Child

About two thirds of the mothers (65%) and fathers (61%) indicated they would like their child to obtain a graduate degree. About 20% each (20% mothers, 21% fathers) indicated they hoped their child would obtain a bachelor degree, and 4% of each group indicated an associate degree (see Figure 9 for further details). When asked the main reason their child might not continue his or her education after high school, the most frequent responses given by both mothers and fathers were that college was too expensive (50% mothers, 46% fathers) and that their child was not interested (17% mothers, 22% fathers).

Parents were asked to estimate the one-year expense for their child to attend a four-year public college in their state. The $10,000 average (median) estimate was identical for mothers and fathers, and is higher than both the West Virginia and national yearly averages of $6,751 and $8,018, respectively (Snyder & Hoffman, 2000) for tuition plus room and board (WV and national averages for tuition only are $2,337 and $3,226, respectively).
Slightly less than a third of both parents (32%) reported that they were saving money for their child’s college education. Approximately a third of both groups (32% mothers, 39% fathers) thought their child probably or definitely would be able to afford to attend college. Over a third (42% mothers, 39% fathers) were not sure, while 26% of the mothers and 22% of the fathers either doubted or were positive their child could not afford college.

When asked if they had heard of a variety of sources for financial aid for education beyond high school, mothers responded slightly more positively than the fathers for each type. However, more than half of all parents reported hearing about each type of aid, except for federal work-study programs. (Only 49% of mothers and 47% of fathers knew about this option.) Both groups were most aware of federal student loans (84% of mothers and 82% of fathers) and athletic scholarships (82% mothers and 80% fathers). Both groups were less familiar with institutional scholarships (54% both mothers and fathers). See Figure 10 for a graphical depiction of parents’ awareness of various sources of financial aid.

Mothers’ and fathers’ responses were similar when asked if they thought their child would likely qualify for enough financial aid to attend college. More than half of both groups (58% mothers, 60% fathers) did not know and slightly less than a third (32% mothers, 31% fathers) responded that their child would likely qualify for such aid. Eleven percent of mothers and 9% of fathers replied their child would not likely qualify for enough financial assistance to attend college.
Finally, parents were given a listing of potential topics for free workshops and were asked to indicate which they would be interested in attending. For each of the 13 given topics, the mothers were consistently more interested in attending than the fathers. Both groups indicated most interest in topics relating to computers, financial aid, college requirements, and child rearing. Both groups were least interested in improving their own academic skills. See Figure 11 for a graphical depiction of the six workshop topics of most interest to both mothers and fathers.
Figure 11: Six Workshop Topics of Most Interest to Parents
CONCLUSIONS

A number of conclusions can be drawn from the WVDE regional GEAR UP data for participating West Virginia seventh-grade students and their parents. These conclusions are presented below by topical themes.

Academics

- **Homework** seems to be especially heavy for the majority of students. Approximately half of the parents and students report that students spend about five hours per day on homework. This estimate, which seems so high as to be unrealistic, is probably due, at least in part, to poor item construction on the survey, since one hour is the smallest increment a respondent could choose other than “never” in the response options for each of the five subjects.

- Overall, students seem to have a positive view of their academic abilities and of the effort they put into their studies. Nearly three quarters report having good study skills. More than half believe they are good students, and 18% think they are excellent. Further, half believe they work as hard as other students and a third report that they work harder or much harder. Parents tend to agree about the effort their child puts into education. About half of both mothers and fathers report that their child works harder than other students, while another 12% of each group believe their child works much harder. Likewise, approximately half of mothers and fathers feel their child is a good student, while a quarter of both report their child to be an excellent student.

- In general, students report doing well in English, math, science, and history. For those not doing well, their most frequent explanations are that they have a grade of C or D or that they don’t do well on tests. About half of the students believe they need help with a specific subject, most often math. Students seem somewhat ambivalent about tutoring as a means to improve their performance, with less than half expressing interest in an after-school tutoring program. On the other hand, more than two thirds are interested in having a mentor.

- The majority of students seem to possess experience with computers and software. Approximately three quarters report having used a computer for homework or school projects and that they have already taken a computer class at school. Further, nearly two thirds have a computer at home, most with Internet access, and report that their parents use a computer as well.
Parent Involvement

- Family members seem to play a critical role in helping students understand and complete homework tasks. The majority of students report that they first look to a parent for such help and also frequently consult with a classmate or friend, teacher, sibling, or some other family member. Approximately a quarter of the parents report helping their child frequently or every day, with mothers helping more frequently than fathers.

- Parent involvement in school-based activities seems to be limited in scope, especially for fathers. About a fourth of mothers and fathers report that they occasionally or frequently meet with their child’s teachers. Roughly a third of mothers report never meeting with their child’s teacher, whereas more than half of fathers report this. Further, about two thirds of the mothers and half of the fathers report they occasionally or frequently attend activities at their child’s school.

- Mothers are consistently more interested than fathers in attending free educational workshops. Nearly three fourths of the mothers are interested in topics such as computers, financial aid, and child rearing, compared to only about half of the fathers. However, for the six topics of most interest, both mothers’ and fathers’ responses were identical in their order of interest.

Student Aspirations

- Students report being well supported in the areas of confidence to take action, sense of accomplishment, and leadership and responsibility. They report feeling less well supported in fun and excitement, belonging, and curiosity and creativity. In other words, while students indicate feeling confident and responsible for their own learning, they do not seem to view their learning as particularly interesting or exciting, do not feel that teachers especially value their thoughts or feelings, and do not feel that they are given many opportunities for exploration or investigation.

- Overall, students’ aspirations for themselves in terms of their postsecondary education were somewhat less than perceptions of their parents’ aspirations for them. Whereas less than half expect to obtain at least a bachelor degree, nearly three fourths report that their parents expect them to do so (mothers more so than fathers). Parents seem to verify this, with more than three fourths of the mothers and fathers reporting that they would like their child to achieve at least a bachelor degree.

- A relatively high percentage of students and parents indicate a desire for the student to achieve a graduate degree rather than a bachelor degree. About a third of the students expect to achieve a graduate degree, half think their parents want them to achieve this educational level, and two thirds of the parents report wanting their child to obtain a graduate degree. It may be that both respondent groups are interpreting “graduate” to mean a graduate of a four-year college rather than of a master or doctoral program.
College Awareness and Preparation

- Overall, students seem to be thinking about the prospect of college at least superficially. Nearly all the students believe that they have the ability to go to college and believe that college graduates earn more money. About three fourths perceive college as very important and indicate that they do want to attend a postsecondary institution. About two thirds believe they need more education to get a satisfying job, and roughly three fourths speculate that continuing their education might help them make career decisions. Further, when asked what careers they might enjoy, students most frequently mention occupations that require college (i.e., doctor, veterinarian, lawyer), although 13% aspire to be athletes.

- Students’ awareness of the various types of postsecondary institutions is adequate. While more than three fourths are aware of four-year colleges, approximately two thirds know about two-year colleges and vocational schools. However, slightly less than half of the students report having discussed college requirements with an adult at home, and only about a fourth have talked with a school counselor. Most parents report they have discussed college options with their child, but have not had discussions with school personnel about required courses and grades.

- Students seem to have some understanding of what is required of them now to begin preparing for college. More than half report that they know which courses are needed to adequately prepare them. However, few students report planning to enroll in various higher level high school courses: Only about half plan to take chemistry or physics, and only about a fourth plan to take calculus or trigonometry.

- Students view parents and teachers as their best sources of information regarding academic choices and most value their input to educational decision making. However, only about a third of the parents are familiar with college entrance requirements and less than half believe they have enough information on high school graduation requirements.

- Both parents and students perceive financial difficulties to be the greatest deterrent to postsecondary education. While more than half of the parents report that they are aware of the various types of available financial aid, only about a third believe their child will qualify for such aid. Interestingly, students are somewhat more optimistic about their abilities to afford education following high school. Whereas only about a third of parents think their child probably or definitely will be able to afford college, more than half of students believe this to be the case.

- Parents seem to overestimate college expenses somewhat, with a median estimate of $10,000 per year, which is higher than both the West Virginia and national yearly averages ($6,751 and $8,018 respectively) for tuition plus room and board at a four-year in-state public college (WV and national averages for tuition only are $2,337 and $3,226, respectively). However, due to item construction, it is not known whether parents’ estimates are solely for tuition or for tuition plus room and board.
RECOMMENDATIONS

The GEAR UP project can make a substantial difference in West Virginia students’ lives by working to allay some of the state’s educational problems. Based on the findings and conclusions presented in this report, the following recommendations are made to WVDE GEAR UP staff in the interest of increasing students’ and parents’ awareness of and interest in postsecondary education.

• Establish tutoring and mentoring programs and encourage student participation in such programs.

• Emphasize the importance of taking more challenging college-preparatory courses and encourage more students to plan on taking higher-level academic courses, especially calculus and trigonometry, to better prepare them for postsecondary education.

• Provide students and parents with information about degree requirements for various career choices.

• Provide students and parents with information about and entrance requirements for both two- and four-year colleges, as well as for vocational and business schools.

• Provide students and parents with accurate estimates of the projected costs of higher education.

• Provide students and parents with information about and requirements for various financial aid sources for financing postsecondary education.

• Work to find ways to increase parents’ involvement in the academic lives of their children, beyond occasionally meeting with teachers or attending school activities.

• Establish a schedule of educational workshops for parents on the topics of computers, college requirements, financial aid options, and child-rearing (such as helping kids study, knowing the signs of a troubled teen, and understanding teens).

• Begin focusing efforts to bring more of a sense of excitement and creativity to the educational experience in order to better capture students’ interest and pique their inquisitiveness and curiosity for new discoveries. Further, work to build a stronger connection among students, teachers, and administrators to foster a more supportive environment for students.
In terms of improving data collection for the next year's survey of incoming seventh graders, seven suggestions are offered. First, revise wording on items dealing with perceived degree expectations to alleviate any misinterpretations regarding a “graduate” degree. Second, convert the surveys to a scannable format in order to reduce data entry time and expense. Third, combine both student surveys into one streamlined survey. Fourth, add appropriate items to the two student aspirations subscales (leadership and adventure) that produced the lowest internal consistency reliabilities. Fifth, reconstruct the response options for homework-related items to include half-hour increments. Sixth, clarify the wording on the estimated expense for attending one year at a four-year in-state public college to specify that the estimate should only include tuition (not room and board). Seventh, clarify items related to parents’ use of a computer to specify home usage only.

Developed by Fairmont State College GEAR UP project in partnership with AEL, Inc.

Items 37-64 used from the Students Speak survey developed by the National Center for Student Aspirations, College of Education and Human Development, University of Maine.
West Virginia State GEAR UP Grant
2000-2001 7th Grade Student Survey

Note: Percentages are based on the number of respondents for each item.
Please place a checkmark (✓) or write in your answer, as appropriate.

School and School Work

1. Who usually helps you with your homework?
   A teacher at your school
   A GEAR UP tutor
   A GEAR UP mentor
   Your mother, father, or guardian
   Another adult in your home
   Your brother or sister
   A classmate or friend
   Some other person

2. Compared with other students, how hard do you think you work in school?

3. What type of student do you consider yourself to be?

4. How important to you is what each of the following people think you should do about your education?
   Parent(s) or guardian(s)
   Teacher(s)
   Guidance counselor(s)
   Principal or assistant principal
   Religious leader (minister, priest, rabbi, etc.)
   Friend(s)
   Coach
   GEAR UP staff (mentors, tutors, staff, etc.)
   Some other person

Knowledge about College

5. Have you talked with your school counselor or someone else at your school about the entrance requirements for college?

6. Do you have an idea of what courses you should take in high school to prepare you for college?

7. Have you heard of the following types of postsecondary schools?
   Two-year or community college
   Four-year college or university
   Vocational, trade, or business school

Identification Code: 12/21/00
A total of 1,643 respondents.
8. How much do you think it costs to attend a four-year public college in your state for one year?  

$8,000 average

9. How important to your future is getting an education beyond high school?

<table>

□ 7% □ 6%

□ 18% □ 15%

□ 46% □ 54%

Background

19. What is your gender?

Male □ 51%  Female □ 49%

20. When were you born?

1986 (6%), 1987 (39%), 1988 (49%)

Month □ 1%  Day □ Hispanic or Latino

Year □ 0%  Native Hawaiian or Other Pac. Islander

21. How do you describe yourself?

□ 2% American Indian or Alaska Native

□ 0% Asian

□ 4% Black or African American

□ 88% White

□ 5% Other
Note: Percentages are based on the number of respondents for each item.
Instructions: This survey is intended for the parents or guardians of the 7th grade student. It is very important to gather as much information as possible; therefore we need both parents or guardians to complete a copy of the survey if possible. If this is a single-parent household, please disregard the second copy. Thanks for your participation!

Please place a checkmark (✓) or write in your answer, as appropriate.

General Information

1. What is your relationship to the seventh-grade child who brought this survey home?
   - 0% Father or male guardian
   - 99% Mother or female guardian
   - 1% Other

Your Child

2. For each of the following subjects, about how much time each day does your child spend on homework?
   - English
   - Science
   - Math
   - History/Social Studies
   - All other subjects

3. For each of the following subjects, about how often each week do you help your child with homework?
   - English
   - Science
   - Math
   - History/Social Studies
   - All other subjects

4. Compared with other students, how hard do you think your child works in school?
   - Much less
   - Not as Hard
   - Much Harder
   - Harder

5. What type of student do you consider your child to be?
   - Think about your child’s academic performance and his or her study habits.
   - Poor
   - Fair
   - Good
   - Excellent

6. Have you talked with anyone at your child’s school about the courses or grades your child needs in order to graduate from high school?

7. Do you feel you have enough information about the graduation requirements for high school?

8. How often do you attend activities or events at your child’s school?

Continue
9. How often do you meet with your child’s teachers to discuss the academic progress of your child?

- Never 31%
- Once 16%
- Occasionally 26%
- Frequently 22%
- Rarely 5%

10. How satisfied are you with the education your child is currently receiving?

- Very dissatisfied 4%
- Dissatisfied 17%
- Somewhat dissatisfied 66%
- Satisfied 13%

**Your Child’s Future Plans**

11. Who provides your child with information about options for continuing his or her education after high school?

- Myself 96%
- Other adults at home 84%
- Siblings 50%
- Teacher(s) at school 78%
- Coach at school 36%
- Other school staff 48%
- Child’s friends 44%
- GEAR UP tutor 9%
- GEAR UP mentor 9%
- Other GEAR UP staff 9%
- Someone else 36%

12. How far in school would you like to see your child go?

- Less than High School 0%
- High School diploma 7%
- Associate degree 4%
- Bachelor’s degree 4%
- Graduate degree 20%

13. If your child does not continue his/her education after high school, what would be the main reason? (Check only one.)

- It costs too much or cannot afford it 17%
- College is too far from home 5%
- H/she needs or wants to work 13%
- His/her grades are not good enough 32%
- It is not necessary for what he/she wants to do 68%

**Knowledge About College**

14. Have you talked with anyone at your child’s school about the courses and grades he/she needs to get into college?

- Yes 13%
- No 87%

15. Are you familiar with the entrance requirements for the three basic types of postsecondary schools?

- Two-year college 36%
- Four-year college or university 35%
- Vocational, trade, or business school 37%

16. Have you talked with your child about attending college?

- Yes 90%
- No 10%

17. How much do you think it costs to attend a four-year public college in your state for one year?

- $10,000 average

18. Have you started saving any money for your child’s college education?

- Yes 32%
- No 68%
