This paper discusses the details of existential sentences constructed with the Portuguese verbs "ter" and "haver" in the interpersonal form. The uses of these verbs are discussed and analyzed in detail. The history and evolution of linguistic changes in Brazilian Portuguese are discussed in an attempt to detect historical social and cultural factors responsible for the variation in existential sentences. (Contains 15 references.) (KFT)
Ter/haver-existential clauses in Brazilian Portuguese: variation ad change

Dinah Callou (UFRJ/CNPq-Brazil)

1. Introduction

Generally, the label “existential sentence” denotes the *there is/are* constructions and its equivalents in other languages. In this paper, I shall reserve the term *existential sentences* to designate sentences constructed with the verbs *ter* e *haver* in the impersonal form, as in example (1):

(1) Há/Tem muitas razões para agir assim (“There are many reasons to act like this”)

There is a certain amount of cross-linguistic variation as regards the verb appearing in central existential constructions. Many languages, like English, use the copula *be* (*there is/are*); some, like French (*il y a*) -- and contemporary Brazilian Portuguese (*tem*) -- as well, use *have*. Quirk *et alii* (1972), in *A grammar of contemporary English*, discuss a less common type of existential constructions in English in which an extra participant is introduced as theme: the subject of the verb *have*. In their own words “This refers to a person, thing, etc., indirectly involved in the existential proposition” (p.961), as in “*The porter had a taxi ready*”.

Apart from languages that always use introductory adverbs in existential clauses, such as English (*there to be*), French (*y avoir*), and Italian, in contemporary Brazilian Portuguese (example 5), the use of a deictic locative expression (examples 2, 3 and 4) is no longer obligatory. It should be observed that a prepositional phrase expressing “place” would be equivalent to a subject noun phrase in possessive constructions, as in (6) and (6').

(2) ... que non avia *y* mouros nem judeus (“that there were no moors or jews” - Cantigas de Santa Maria – 13th century)
For a long time, many authors have postulated the hypothesis that existential and locative sentences may be gathered together in a same group. Since Lyons (1979), it has been observed that, in almost all languages, possessive and existential clauses may be considered to be syntactically derived – synchronically as well as diachronically -- from locative constructions. Guéron, 1986 (apud Franchi et alii) justifies this position through the use of the same verb avoir both in existential and possessive sentences. The same is true for Brazilian Portuguese, in which the use of ter in a third-person singular form gives rise to an existential expression.

This derivational hypothesis is no longer accepted by many authors. Viotti (1999), based on Chomsky’s minimalist program, presents a formal explanation to explain the syntax of existential clauses in Portuguese. Observing the history of the verb ter in Brazilian Portuguese, Viotti comes to the conclusion that all sentences with this verb -- regardless of the semantic domain -- presents the same syntactic origin. Franchi et alii (1998), based on the properties observed in the analysis of a corpus of spoken Brazilian Portuguese, say that “existential sentences fall into a class of constructions called impersonal constructions”. Many linguists also refer to the fact that the noun phrase following the verb is usually indefinite – the so-called definiteness effect, pointed out by Milsark (1979).

In any case, our aim here is not to present arguments or take a position for either explanation of the phenomenon.

2. The problem and the data
The use of *ter (=to have)/haver (=there to be)*-existential clauses represents one out of many linguistic changes that took place in Brazilian Portuguese beginning in the XIXth and has been analyzed from different perspectives. Mattos e Silva (1997/1996/1989) presents a detailed description of use of these verbs in ancient Portuguese, but, in this paper we consider its use only in existential sentences, trying to detect the historical, social and structural factors that are responsible for its variation in contemporary Brazilian Portuguese. It has been assumed that certain syntactic, semantic and social factors influence variation between the two verbs. These are: verb tense and semantic nature of the internal argument, age group and gender, respectively.

The results are based on qualitative and quantitative sociolinguistic variation analyses in real time (short and long term) and in apparent time. The data are taken from written *corpora*, spanning the 13th to the 20th century, as well as from oral *corpora*, consisting of informal interviews with University graduates (standard dialect) from Rio de Janeiro, stratified for age and gender. The spoken sample was collected in the 70’s and in the 90’s, for a panel and trend study.

Through-out the recorded history of Portuguese language, *ter (= tenere)* and *haver (= habere)* may be considered verbs of broad functionality. The multiple functions range from a main verb, indicating possession (7) and/or existence (8) to an auxiliary (9), indicating time, mood, and aspect and even to a ‘light’ or functional verb (10) that transfers predication to its object.

(7) *Ele tem muitos livros na mesa* (“He has many books on the table”)
(8) *Há/Tem muitos livros na mesa* (“There are many books on the table”)
(9) *Ele tinha/havia comprado muitos livros* (“He had bought many books”)
(10) *Ele tem tempo para fazer o trabalho* (“He has time to do the work”)

Given such a broadening of functions, *ter* eventually displaced *haver* in the semantic domain of possession. The overlapping of these verbs appears to be rooted in developments that took place much earlier in Latin. The intersection of meanings of *habere*, prototypical possession (*to take possession, to maintain, to own*) and *tenere*, secondary possession (*to hold[in hand]), to sustain, to possess, to obtain*) could explain the process.
Beginning with the first documents, in Portuguese (Mattos e Silva, 1996), as well as in Spanish (Camarero, 1997 [apud Viotti]), there is a tendency to use ter as a verb of possession and by the middle of the 16th century ter displaced haver from this semantic domain. On the other hand, haver substitutes ser (= to be) as the central existential verb and the frequency of use of ter in existential clauses increases gradually over time (Figure 1). This substitution may also be traced back to the middle of the 16th century, the same period in which haver no longer indicates possession, except in specific contexts.

![Figure 1](image)

Figure 1 – The alternation of use of ter/haver-existential clauses in the history of Portuguese language

The distribution of the three verbs, ter (to have), haver (there to be) and ser (to be) in the nuclear domains of possession and existence may be represented by the following schemas:

\[
\begin{align*}
\text{possession (X has Y)} & \mapsto \text{habere} & \text{existence (Y exists)} & \mapsto \text{esse} \\
\text{tenere} & \mapsto & \text{habere} & \text{tenere}
\end{align*}
\]

Callou & Avelar (1999) show that, in the last century, the frequency of use of ter (22%) instead of haver (78%) was still low, although. Júlio Ribeiro (1914), in his grammar, had observed that "the substitution of haver by ter was increasing in Brazil, even in standard dialect".
Figure 2 – Existential constructions with ter and haver in spoken language, taking into account the distribution in both samples

Figure 3 - Frequency of the verbs in each decade

Nowadays, the use of existential sentences with the verb ter is predominant in Brazilian Portuguese, in opposition to haver, as we can see in Figure 2.

If we take into consideration the two decades, the results suggest that there is a change in progress (Figure 3).

2. **Conditioning factors: statistical results**

   For the spoken language (1528 tokens), both in the 70’s and in the 90’s, the VARBRUL program shows that the most significant structural and social factors are: verb tense, semantic nature of the internal argument, age group – by decade -- and gender.

   For tense, ter-existential sentences usually appears in the present tense and haver in the past (perfect and imperfect). Table 1 exhibits this opposition and the increase in use of ter in the 90’s (with different speakers) when the verb is in the perfect tense.

<table>
<thead>
<tr>
<th>TENSE</th>
<th>70’s</th>
<th>90’s</th>
</tr>
</thead>
<tbody>
<tr>
<td>Present</td>
<td>340/486 70% / .60</td>
<td>350/397 88% / .60</td>
</tr>
<tr>
<td>Perfect</td>
<td>5/48 10% / .09</td>
<td>15/43 35% / .38</td>
</tr>
<tr>
<td>Imperfect</td>
<td>159/250 64% / .44</td>
<td>137/205 69% / .45</td>
</tr>
</tbody>
</table>

   Table 1 – Percentage and Relative Weight of the use of ter

   The numbers suggest that haver, in spoken language, has become a typical verb of narratives, a discourse modality that favors the use of the past tense.
For the semantic nature of the internal argument, the following factors were postulated: animate (11 and 12), inanimate – concrete -- (13 and 14), abstract (17 and 18), space – public place, district, region -- (15 and 16), and event (19 and 20).

(11) **há mulheres que se comportam...** (70-233)
"There are women that behave themselves"

(12) **aqui no Leblon tem o padre ...** (90-347)
"Here, in Leblon, there is the priest"

(13) **havia muita banana...** (70-141)
"There was much (lots of) banana"

(14) **tinhas biscoitos na Colombo...** (90-002)
"There were biscuits (cookies) in Columbo"

(15) **havia alguns cinemas na cidade ...** (70-259)
"There were some movie theaters downtown"

(16) **tem bairros sensacionais fora de Salvador ...** (70-255)
"There are sensational neighborhoods outside of Salvador"

(17) **não havia uma censura tão grande, não havia exagero...** (70-259)
"There wasn’t so much censorship, there was no exaggeration"

(18) **não tem mais o charme que tinha...** (70-255)
"It’s old charm doesn’t exist anymore.

(19) **foi uma fase que houve concursos públicos ...** (70-164)
"It was a phase in which there were public competitions"

(20) **quando eu fiz quinze anos, teve uma festa maravilhosa...** (90-002)
"When I was fifteen years old, there was a wonderful party"

Generally, when the internal argument is an “event”, the verbs ter and haver are not really “existential” and could not be properly replaced by “exist”. The verb has rather the meaning of "occur", "happen" or "take place", as in examples (21) to (23). In contemporary spoken Brazilian Portuguese, haver has a factual sense. In any case, the frequency of use of ter-existential sentences is higher from one decade to the other for all uses.

(21) **um dia houve uma enxurrada** (70-273)
"one day a heavy rain occurred"

(22) **quando há uma seca muito violenta** (70-247)
“when a violent draught occurs”

(23) *toda vez que há uma festa* (70-247)
“each time a party occurs”

As we can see (Figure 4), the use of *haver* is almost exclusively restricted to [+abstract] and [+event] arguments.

The great majority of cases that favor the use of *haver* refers to prototypical cases of the so-called “light” verbs, the object of which is not definite nor referential, as in examples 24, 25, 26 and 27.

(24) *não há vantagem* ... 90-164 (“there is no advantage”)
(25) *não há tempo* ... 90-164 (“there is no time”)
(26) *há possibilidade* .. 70-114 (“there is [a] possibility”)
(27) *não havia jeito* ... 70-088 (“there was no way”)

The patterns of distribution by age group are similar, but, in the 90’s, there is a well marked opposition between younger speakers and middle-aged and older speakers: a curve of change in progress in the direction of elimination of *haver-existential* (Figure 5). Our hypothesis is that in school the use of *ter* may no longer be stigmatized, even in written language.

When we are dealing with the same speakers, in the two decades, the results run parallel to the projections of Labov’s age-grading model, but at a higher level (8 % to 18 %). Thus, the majority of the community continues to advance in the use of *ter-existential* (Figure 6).
Gender also has a significant effect, mainly in the 70's (Figure 7). It seems that women were in the lead of the process, insofar as younger women present higher frequency in the 70's (80% -female versus 46% - male), the use of ter being almost categorical (98%), in the 90's, in both male and female speech.

3. Perspectives and conclusions

The next step in our research is to analyze more deeply the possibility of the presence of a pronominal subject, generally você or a gente, in ter-existential clauses, as seen in examples (28) and (29).

(28) em Kioto, que era a antiga capital do Japão, você tem esses templos lado a lado com ... (90-012)

“In Kyoto, which was the ancient capital of Japan, you have these temples, side by side with”...

(29) a gente tem uma aglomeração de pessoas aqui na Tijuca (90-002)

“we [=people] have a crowd here at Tijuca

This use is increasing in the 90’s (Figure 8) and it has been explained within the general tendency towards the loss of the principle “avoid pronoun” (Duarte, 1995) in Brazilian Portuguese.

The preceding sections have also shown the following:
a) there is a real-time change taking place (*haver*-existential → *ter*-existential) and age-grading seems to be involved in the process;
b) it is possible that the substitution of *ser*-existential by *haver*-existential was already complete at the 16th century;
c) the use of *haver*-existential (78%) has prevailed till the 19th century;
d) younger speakers no longer have *haver*-existential sentence in speech.

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEminate THIS MATERIAL IN MICROFiche OR OTHER ERIC ARCHIVAL MEDIA HAS BEEN GRANTED BY

Level 1

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEminate THIS MATERIAL IN MICROFiche AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY HAS BEEN GRANTED BY

Level 2A

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEminate THIS MATERIAL IN MICROFiche ONLY HAS BEEN GRANTED BY

Level 2B

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.
