Abstract

In 1958, the U.S. Congress legislated the National Defense Education Act to educated U.S. citizens in languages and area studies in order to qualify for employment at universities and government agencies. By 1995, many of the area studies librarians were beginning to retire with few qualified librarians having area specialization to replace them. The solution became the Andrew W. Mellon Post-Doctorate Fellowship in Research Librarianship. The author describes her training as an Africana fellow and asserts that the training is equivalent to a masters degree in library and information sciences. The fellowship at Indiana University comprised training in collection development, practica in government documents, preservation, and cataloging, reference, the attendance at conferences, and field trips.

Keywords: Mellon Fellowship, African Studies, Africana bibliographer, mentor, training, area studies, National Defense Education Act Title VI (NDEA), Higher Education Act Title VI (HEA), languages, research experience, Library and Information Studies (SLIS)
A YEAR IN THE LIFE OF AN AFRICANA FELLOW:  
THE MELLON FELLOWSHIP

During the past decade, area studies librarians at research universities in the United States will retire in the next few years (Jakubs, 1997). These librarians do not envision graduates of library schools able to meet the needs of faculty and students of area studies or have the expertise in area-specific content (Schmidt, 1997 & 1998). With the endorsement of area studies librarians and directors and of library administrators, Duke University and Indiana University library staff obtained Mellon Foundation funding with the expectation to ameliorate the paucity of U.S.-trained area librarians. The Mellon postdoctoral fellowship in librarianship was designed to prepare recent U.S. doctoral graduates of area studies for reference positions as area studies librarians (Kniffel, 1998) with the implication that this training was in lieu of the typical academic library qualification—a masters degree in library and information studies from an ALA-accredited institution. (Appendix A)

The paper will first summarize the background leading to this action. It will then outline the activities of one fellow.

Historical Background

In 1958, the U.S. Congress enacted the National Defense Education Act (Higher Education Act, 1965). It was designed to educate U.S. citizens in languages and area studies so that the United States might surpass the Soviet Union. Legislators had argued that some citizens must gain an in-depth knowledge of a
world region and that their regional language proficiency must be at a level necessary to maintain national security. In the mid-1960s, as part of the refunding of the legislation, research universities designated a librarian or scholar to oversee the area studies collection of each center (Schmidt 1997). However, by the 1990s, many of the first generation area studies librarians had begun to retire (Atkinson 1991). In addition, area librarians such as Africana librarians (Bein 1993; Malanchuk 1991; Olden & March 1990; Witherell 1989) articulated their frustrations stemming from the increased complexity of librarianship as seen in cataloging, acquisitions, collection management, and reference, all of which required significant Africana specialization.

Status of Area Studies librarians

In 1993, the annual meeting of area studies administrators focused its discussions on the crisis of area libraries and the potential for cooperation (Schmidt 1997). Cognizant of future area studies shortages of librarians and uncertainty about prospects for area studies programs, librarians and administrators realized that few area studies students were preparing themselves for librarianship (Atkinson 1991). For instance, at a time when publications about Africa were proliferating (Altbach and Hoshino 1995; Bischof 1991; Schmidt 1998), few professors (Alden et al. 1993; Bastian & Parpart 1999; Bates et al. 1994; Guyer 1996; Haugerud 1997; West & Martin 1995) had mentioned bibliographic instruction as a component of their courses or had suggested
librarianship as an alternative employment opportunity for their students.²

On the librarianship side, most masters degree graduates of library and information studies programs were and continue to be trained as generalists (Crosby 2000; Hoffman 1993; Robde and Herther 1993) with little non-Western language proficiency, area travel experience, and area studies specialization.³ As new forms of technology made demands on library students in the fields of the acquisition, cataloging, selection, and retrieval of materials, retiring area studies librarians (Schmidt 1997) became aware that they would need to identify and train recent area studies graduates to become librarians since library degrees did not address the needs of their specialization.

Area studies librarians are the keystone that links U.S. scholars with sources in the designated areas and around the world. In the past, few professors have had the time to maintain library collections in their discipline. A librarian must shape the collection to the current and future needs of the faculty and students by means of approval plans, vendor profiling, catalog selections, gifts, exchanges, and collecting trips. In addition, faculty-status librarians are expected to maintain a research program, teach bibliographic courses, digitize materials, and evaluate print and on-line resources. All these duties have remained necessary for the area studies program at the level required for research university needs and government funding (Olden and Marsh).
Therefore, in 1995 and again in 1997, Indiana University faculty and staff with HEA Title VI funding hosted conferences on the status of area studies librarians (Schmidt 1997). Among the deliberations, librarians discussed strategies for training graduates from their area studies programs who had area language proficiency, area research experience, and an area studies doctorate. Later, area librarians and area studies center directors heard the results of four sets of surveys (sent to library school deans/directors, library directors, area studies directors, and area studies librarians) pertaining to the needs of area librarians. The results emphasized the need for librarians to obtain skills in electronic resources, area languages and studies, grant writing, management, collection development, and acquisition cooperation, among others. Participants concurred that action was necessary and discussed models for training.

Models

Participants then described several models that might address these needs. The Stanford University model was limited to pre-dissertation students for work with an area librarian (Schmidt 1997).

Two other models funded postdoctoral researchers. Specifically, the Library of Congress (LC) financed about nine graduates to conduct expanded library research based upon their dissertation while the Smithsonian Institute funded graduates to
Mellon collaborate on specialized projects, such as the Smithsonian Tropical Research Institute. The area studies librarians agreed that these models might be ones that they could adapt.

The final agreement was to apply Andrew W. Mellon Foundation funding to new programs incorporating aspects of all three models. Two HEA-funded universities (Duke and Indiana) were designated to provide postdoctorate library training in three-year cycles. (Appendix A) Recent doctoral graduates from any field of Latin American, African, or Russian/Eastern European studies could apply. In each case, the candidates had to have a language proficiency from the area (e.g., Spanish, Portuguese, Hausa, Swahili, Russian, and Polish). They also needed to demonstrate prior work experience at a research library and the desire to make a career change. An area studies librarian would supervise the fellows in consultation with area studies faculty. In addition to learning about collection development, the fellows would arrange internships with other library divisions. A visit to the LC and another major library was a component of the fellowship.

In the end, the two universities received needed support to implement programs that were slightly different. Duke University received funding for six graduates of Latin American studies administered by the Center for International Library Programs. Each year two fellowships were for a twelve-month appointment with a stipend of $38,800 plus benefits. During their appointments, the fellows also visited major Latin American collections such as the one at the University of Texas. In addition, the fellows
Mellon participated in the Seminar on the Acquisition of Latin American Library Materials and the Latin American Studies Association.

In contrast, the Indiana University Main Library offered one postdoctoral fellowship each academic year open to African and Russian/East European scholars. These fellowships carried a stipend of $26,500 plus benefits. During the first semester, the fellows "shadowed" the bibliographer while in the second semester they interned in cataloging, digital/scanning, or other divisions. The fellows negotiated to "sit in" on a course offered in the library school and to attend their respective area bibliography course. In the Africana case, two fellows visited the Center for Research Libraries and Northwestern University Library followed by attendance at the Africana Librarians Council meetings.

The administrators at both universities expected that each fellow would apply for area librarian positions during the appointment. Moreover, the administrators assumed that the fellowship would be regarded as equivalent to a masters degree in library and information studies at an American Library Association (ALA)-accredited program. But in fact, several personnel officers disqualified applications from Mellon Fellows since they did not have the requisite library degree. Likewise, among general librarians, this intensive training was not viewed as equivalent to an ALA-accredited program. In the case of the Indiana fellowship, it was not part of the ALA-accredited School of Library and Information Sciences; rather it was administered through the Main Library which is not an academic unit.
In the remainder of the chapter, the author, who was a Mellon Fellow, describes the training which appears to parallel that of a masters degree. The apprenticeship approach took into account different learning styles and expertise of the fellows and mentors. Furthermore, the design of the program was learner-centered (O'Banion 1997) and enabled the fellows to customize training to meet their needs, to supplement the skills of area librarian mentor, and to prepare for research library employment.

Self-study

As a fellow in 1999-00, I deliberately sought to match my apprenticeship activities to requirements of a masters degree in library and information studies. I maintained a daily log and thus am able to compare these activities with the requirements of the masters degree as found at Indiana University, the University of California-Los Angeles, the University of Illinois-Urbana/Champaign, and the University of Wisconsin-Madison, all high ranking ALA-accredited institutions. In order to take full advantage of the apprenticeship, I pursued many activities after hours. Typically, a masters degree program requires a combination of required courses, a practicum, and several elective courses.

Required courses

Library students must complete prerequisites such as computer tools and requisite courses such as librarianship, user needs, reference cataloging, management, and collection development.
A. Computer tools

Library school candidates must have knowledge of email, word processing, databases, and spreadsheet software. Even though technology is an important component for the masters, few departments provide training in specific software. Since Indiana is a Microsoft Suite campus, fellows learned MSWord, Access, Excel, and Explorer. Fellows also enrolled in the workshops on Pine email, Unix, HTML, web design, Photoshop, ProCite, and PowerPoint. Therefore, I chose to attend evening and weekend courses offered by the university computer center. In my case, this training resulted in the creation of a Web page on awards given to books about Africa.

In addition to this training, fellows need in-depth training for online public access catalogs. Although I had conducted my doctoral research via NOTIS and then Voyager, at Indiana I learned advance strategies and Boolean logic using NOTIS. Librarians provided me opportunities to become familiar with OCLC and RLIN, particularly as applied to the Arabic fonts. During the course of the year, I followed the preparations for conversion to a new online system--SIRSI.

Databases (Web or CD-Rom) were another area requiring some training. Although fellows are familiar with Dissertation Abstracts, ERIC, Education Index, and CARL Uncover, among others, I now had to familiarize myself with a range of products such as Academic Search, Art Abstracts, Dow Jones Interactive, JStor, Library Literature, NEXIS/LEXIS, Statistical Universe, GPO Access,
CQ OnCongress, and Web of Science and tools such as ArcView GIS and Endnote. To become familiar with web sites and a popular web software, I enrolled in an online course, "Virtual Collection Development," which discussed issues of copyright and intellectual freedom.13

B. Perspective of librarianship

Customarily, the first course that library students take is one that addresses components of being a librarian. Instead of reading books on the topic, I visited libraries (over 20) on the campus and interviewed a librarian from each location. In addition, I met with all the subject area librarians, the Walden University library liaison, and all the Main Library division heads. At each meeting, I posed four major questions: How did you come to the current position?; What is the most important feature of your collection or division?; What is the most critical issue for you and the future of the collection or division?; and How can I make the most of this fellowship? In the end, I met over 40 librarians.

Likewise, I interviewed off-campus librarians. At each location, I asked to chat with the person responsible for bibliographies, cataloging, reference, government documents, preservation, the library school, and children's literature. (Appendix B) While in Chicago, I visited librarians at the University of Chicago, Middle East Studies Collection; the Center for Research Libraries, CAMP (Cooperative Africana Microform Project); and Northwestern University, the Herskovits Collection.
For comparison, I also contacted librarians at three other HEA funded institutions: the University of Wisconsin, the University of California-Los Angeles, and the University of Illinois. During my week at the Library of Congress (LC), Division of African and Middle East Studies, I requested a tour of the National Museum of African Art Library. These off-campus visits allowed me to contact over 50 other librarians and to compare their facilities.

To become more familiar with "book history," another component of introductory courses, I attended a monthly seminar on the "History of the Book" hosted at the Lilly Library (rare book collection). Speakers (librarians and faculty) discussed issues of publishing, materials, editions of books, and preservation. I doubt that many library students could have met such a variety of librarians even with distance delivered programs.

C. User needs

A third required course is one that deals with user needs and behaviors. Usually, such a course addresses K-12 users, the community leaders, attorneys, corporate staff, adult reference, offenders, retired folks, research methods, and information seeking strategies. However, for the purpose of my training, I focused on the African studies community--faculty, staff, and students. Since I had previous experience with research methods, learning about information seeking strategies was not necessary.

To become familiar with Indiana users, I read the Africana selection guidelines and designed a matrix to show how the collection policy matched the African studies users' research
Mellon

priorities. Since I was not familiar with many of the professors and most of the students, I attended every African Studies Program activity. This plan included the weekly seminars, the bi-weekly graduate seminars, the periodic staff meetings, an international studies conference, a music concert, an African education conference, an African textile exhibit, and an "Art Divination Jamboree." I also critiqued graduate students' research proposals for a SSRC competition. To identify who was interested in Lusophone Africa, I attended a six-week film festival.\(^1\) During the course "Bibliography of Sub-Saharan Africa," I listened to new students discuss the preparation of their literature review.

In addition, I attended a year-long seminar on the "Scholarship of Teaching and Learning" for the teaching staff. This seminar provided me contacts with instructors who were using innovative teaching strategies. Several presentations concerning distance education enabled me to anticipate future technical needs of Africanists.

By the end of the year, I was familiar with most Africanists' needs and interests. This knowledge helped me make appropriate selections and to support the area librarian's argument for an electronic database.

D. Reference

"Information Sources and Services" is a critical course for librarians. For that reason, students typically arrange to take this course early in their program. I negotiated to attend this course offered by the School of Library and Information Sciences
during the first semester. Although I planned to take the African bibliography class, I felt that I should know the general reference sources. It would be more efficient for me to do this part in a class and to interact with library students and a practicing librarian. True to the fellowship, I chose African topics for all my weekly "searches." Several times a week, I answered reference questions via email. As an introduction to bibliography instruction, I assisted in presenting sources to a political science class. During the practicum at Government Documents, I had a two-hour assignment each week at the reference desk. This experience helped familiarize me with not only materials cataloged with LC classification but also the government "SuDocs" classification. As mention above, the 14 reference workshops using computer technology were extremely helpful for answering questions.

E. Cataloging

Although few librarians do original cataloging any more, knowledge of cataloging principles remains an important part of library students' training. Since I anticipated taking a future course, I requested an internship in the technical services division with a cataloger. During my 120 hours, I learned to create bibliographic records by copy cataloging monographs, series, and multi-volume sets. By doing this, I became familiar with MARC records, AACR2R, and OCLC. Because of the nature of the Main Library practices, I often had to check the LC Subject Headings, authority records, and Cutter numbers. My supervisor asked me to work with a wide range of subjects, which often included African
titles. She also demonstrated original cataloging of Arabic materials.

My understanding of cataloging issues was underscored at the Africana Librarians’ Council (ALC) meetings. Several of the catalogers of LC and Dewey Decimal discussed problems of headings and codings during the sections on cataloging and classification. As a member of the ALC listserv, I continued to read about various cataloging problems.

Although I received a foundation in cataloging appropriate for a research library, I did not obtain training in the Dewey Decimal classification or Sears subject headings. This limitation is not significant given the practice of most research libraries to use LC.

F. Management

Management is a critical area of training often overlooked by students. However, for me, this topic was particularly interesting as a potential librarian of a special collection. As I viewed an Africana position, I would be responsible for accounts, staffing, various committees, communications, and union activities. I participated in several meetings on budgets for new employees as well as the general staff meetings. Because several positions became open during the year, I attended most of the interviewees’ presentations and thus heard librarians posing pointed questions concerning philosophy, vision, procedures, and so forth. Since I was included on all the library division listservs and was a member of the Indiana University Librarians’ Association, I became
familiar with a variety of issues and activities. Some meetings dealt with strategic planning and the redesign of the Main Library facilities. When the Indiana Trustees visited Bloomington, they visited the African collection. I attended their open forum for librarians and staff. Unlike staff at other research libraries, Indiana librarians are staff or faculty, making for an interesting approach to governance. During the second semester, I became familiar with peer review procedures and filing promotion reports.

In an effort to focus on my particular interests, I attended several additional meetings. These meetings included a discussion with OCLC staff, a satellite conference on the "virtual library," and a workshop on expanding distance delivered services. I met with librarians from the American University of Kyrgyzstan to learn more about their library operations. Then to contrast research library with public library administration, I participated in a course on library services for children and young adults by compressed video.

Finally, to gain a general perspective, I attended a seminar on the commercialization of research and human subject research. The discussion centered around copyright, patents, grant writing, capitalization, venture capital, and university legal obligations.

G. Collection Development

Collection development is the fundamental concern of area studies librarians. It is this concern that librarians lobbied for the Fellowship. During the fall semester, Marion Frank-Wilson (Ph.D. Bayreuth, MLS North Carolina-Greensboro) mentored me. She
involved me in all her administrative, reference, teaching, and collection management duties. As a result, I became acquainted with budget preparations; federal, state, and gift accounts; negotiation of book exchanges; preservation of materials; and purchase orders and acquisition transactions. Together, we reviewed the collection policy, wrote a prospectus for approval plans, weeded duplicate copies, and met with representatives from publishers, such as Blackwell. At the African Studies Association meeting, I collected publishers’ catalogs and met representatives, such as Hogarth and African Book Collective. Then, to become familiar with the collection, I selected new titles, prepared orders, and considered review copies. This process involved cross-checking various files or print and online catalogs. In addition, I participated in the Library Committee of the African Studies Program.

The part-time assistant, Dorothy Ansart, oversaw my afternoon projects. Since she held a MLS (Rutgers) and had several years of experience in the collection, she was familiar with the idiosyncrasies of the Africana collection. Several shipments of books from vendors, such as Hogarth and Thorold, arrived throughout the year. These materials required verification and preliminary cataloging. Some books became part of the exchange program. Since many of the African language books had not previously been cataloged in OCLC or RLIN by other librarians, Ansart and I collaborated in preparing information for the catalogers who would do the original cataloging. This process often involved recruiting
"native" speakers who could translate pertinent information. When there were problems, I went to the shelves or the old card catalog to resolve questions. The mentoring by Frank-Wilson and Ansart was a critical component of the fellowship that would lead to the desired long-term career change.

Practicum (40 hrs.)

The second major component at most institutions is the hands-on experience. I chose three practica to complement my training in collection development. Cataloging already has been described. In addition, I worked 80 hours each in Government Documents and Publications and in Preservation and Conservation divisions.

A. Government Documents

Library school students do not often have the opportunity to work in a government document division. I was fortunate that Indiana had a centralized division in the Main Library and a librarian who specialized in African documents.

My primary assignment was to weed African documents shelved in "green boxes." Many of the items had not been cataloged previously because for most of its history the "gov docs" collection had been uncataloged. In order to determine whether an item was a monograph or serial, I had to verify its acquisition record in OCLC. Often, many of these items required original cataloging. Because of the age of the collection, some documents required preservation. In addition to learning the types of documents published regularly by African governments, I had the opportunity to use several of my
languages in verifying cataloging information. Since this project consumed more time than I had expected, I had only a few days to work on a UNESCO project.

B. Preservation

Training in preservation is not available for study at most library school programs. In fact, only two of the three university libraries visited had a preservation department, and only Indiana did anything with African materials. Consequently, I was fortunate to have training in microfilming preparations of Nigerian newspapers in Hausa and a Colombian collection in Spanish. Since grants financed both of these projects, I became familiar with the strategies used to identify funding sources. Finally, in verifying holdings of Onitsha literature (Nigeria), I obtained additional experience in using RLIN.

Electives (audited)

The Mellon Foundation argued that this fellowship was an apprenticeship in which the fellow worked directly with librarians in a concentrated one-on-one relationship. Moreover, the Foundation staff insisted that the fellow could learn the theory as well as the practice under this arrangement. Course attendance would be a distraction and consume time from the apprenticeship.

This stipulation did not sit well with fellows. Having been graduate students for so long, fellows were in the habit of attending courses not only for the theoretical frameworks but also for the socialization. Since the library school was in the same
building as the fellow's office, I utilized the library school library, attended social activities, and kept aware of guest lectures. Like the previous fellow, I arranged to "sit in" on courses each semester; however, I was not allowed to audit any course which might result in a record. Several instructors seemed eager to have the "Mellon Fellow" attending their courses. The interaction with other library students was very valuable, and the courses enabled me to ask theoretical questions to test practical applications.¹⁶

The third fellow benefitted from previous fellows' criticism concerning course enrollment. He was allowed actually to audit or enroll in several courses officially. Since this fellow had begun a masters program in library and information science prior to the fellowship, he was able to apply these courses to his degree requirements.

Conclusions

This self-study of a Mellon Fellowship suggests that the fellow actually does acquire substantial training and knowledge. It might be possible to argue that the training is on the level of the masters degree at some ALA-accredited institutions. However, replacements for four of the five recent U.S. Africana positions were expatriates. (Appendix - C) Moreover, none of the new librarians had training at U.S. government-funded African studies programs. The two Mellon Fellows trained as Africana bibliographers applied for the positions but they were not
Mellon interviewed at every institution nor were they offered a position at any of the libraries.17

All three fellows submitted final reports indicating that the design of the fellowship required substantial changes. They agreed that the fellowship should either be integrated into the Indiana University library school masters program or be a postmasters fellowship for area specialists who have completed a masters degree in library and information studies/science. Two of the fellows attempted to enrolled in the Indiana library school. Unfortunately, they were considered out-of-state students and were required to pay out-of-state tuition. A waiver was not possible.

Despite the excellent training of Indiana University’s area faculty and librarians, if the library profession does not recognize or accept the fellowship as equivalent to a masters degree in librarianship, the fellowship becomes merely an enjoyable learning experience. And the fellowship may even delay the securing of a position in the fellow’s doctoral discipline or publishing articles based on the doctoral research.

More importantly, the library profession may prevent new area specialists from replacing retired area librarian for which the fellowship was created.18 The profession’s insistence that candidates have masters degrees from ALA-accredited programs may actually exacerbate the shortage of area study librarians. Acquiring training is only one step in the process of replacing retiring area librarians. Hiring the fellows is the second and the critical step.
Notes

2. Only two of the 12 currently funded African Studies Centers (Indiana University and the University of Illinois) in cooperation with their library schools regularly offer a Africana reference course to all matriculating graduate students. In 1999, Al Kagen and Yvette Scheven (Illinois) published their course materials (1999).

3. Of the currently funded African Studies Centers, only four institutions have library and information studies programs. Indiana University SLIS provides a dual major in African Studies. The University of Wisconsin allows nine credits to be accepted from another graduate program (e.g., African history, African languages & literature).

5. Deborah Jakubs (Duke) had a Latin American assistantship at Stanford University. Nancy Schmidt (Indiana retired), Al Kagan (Illinois), and Peter Malanchuk (Florida) obtained HEA Title VI library assistantships during their graduate programs. The latter funding no longer exists.

7. In addition to U.S. citizens, applicants often included expatriates with doctorates older than five years or candidates with library experience and a couple with masters degree in library and information studies.

8. See: Hortensia Calvo, Perkins Library, Duke University, Durham, NC http://www.lib.duke.edu/ias/latamer/postdoc.htm or Deborah Jakubs <jakubs@duke.edu>. The following individuals have been Mellon Fellows: Jim Cusick (Univ. of Florida), Hortensia Calvo (Duke Univ.), Teresa Chapa (UNC-Chapel Hill), Luis Gonzalez (Indiana Univ.), and Holy Ackermann.

9. Indiana has a history of promoting Africana librarianship. In addition to organizing meetings that focused on the area librarian crisis, Indiana had already demonstrated interests such as pre-doctoral assistantships, the librarian exchange with the University of Malawi (O’Meara and Winchester 1986), the dual masters between the African Studies Program and the School of Library and Information Sciences. Therefore, Indiana appeared as the institution with appropriate expertise to train a post-doctoral student particularly in Africana bibliography.

In 1998, Suzanne Thorin, Dean of Indiana University Libraries, obtained a Andrew W. Mellon Foundation grant ($164,000) for three fellows. Mentors were Murlin Croucher (Eastern Europe) and Marion Frank-Wilson (Africa) along with other librarians and staff. Mellon Fellows: Chris Gigliotti (Eastern Europe), Patricia Kuntz (African), and Edward Miner (African).

10. The cost of living rate is part of the differences in stipend. For the AY 2000, Indiana University paid $28,500.

11. The Mellon Foundation stipulated that fellows who completed the program could not be hired by their respective institutions of training. At Indiana University, fellows provided monthly reports of positions to which they applied.

12. Indiana University (#6) offers several degree options: MLS requires 36 credits and MIS requires 42 credits. http://www-slis.lib.indiana.edu/programs/

UCLA (#10) requires 44 credits for a MLIS and has a specialization in Latin America. http://www.gseis.ucla.edu/about/degree_programs.htm#masters

Illinois (#1) requires 40 credits of which only 2 courses are "core" for a MS. http://alexia.lis.uiuc.edu/gslis/degrees/ms.html

Wisconsin (#8) requires 42 credits of which 25 credits are required in "core courses" and practicum for a MA. http://polyglot.lss.wisc.edu/SLIS/academic/program.html

13. Jane Pearlmutter (Wisconsin) offers a six-week continuing education course each quarter using WebCT. <jpearl@slis.wisc.edu>

16. Courses attended: http://www.slis.indiana.edu/Courses
   First Semester
   L520 Information Sources & Service - Jackson
   (This course provided a foundation to reference interviews and materials.)
   Second Semester
   G732 Introduction to the Bibliography of Sub-Saharan Africa - Frank-Wilson
   (Although I should have been familiar with most resources, I actually knew only those of my doctoral research--language acquisition.)
   L535 Library Services for Children and Young Adults - Fitzgibbons
   (Since I have reviewed children’s books about Africa for over ten years, I sought interaction with other professionals.)
   L610 International Information Issues - Travica
   http://php.indiana.edu/~travica/610syllabus_spring2000.html
   (My previous work in electronic technology gravitated to this course in which I focused on developments in East Africa.)
   Virtual Collection Development - Pearlmutter
   http://uwmad.courses.wisc.edu/web-ct/courses/
   (Since I was interested in distance-delivered courses and library science, this course was a natural. Moreover, it was one offered through my home university.)

17. The fellow in Russian and Eastern European Studies experienced the same limitations. However, five fellows trained at Duke University in Latin American librarianship have found employment even if the library position is not a Latin American one (one Duke fellow works part-time in a journalism library).

18. The Library of Congress does not require a MLS for librarian positions. Recently, the University of Wisconsin advertised two area studies librarian positions (Southeast Asia and East Asia). Neither position required a MLS. The announcement stated that a candidate with an advanced graduate degree (i.e., Ph.D.) in a field of the area studies and significant library experience should apply.

Announcement for 2000-2001

The Andrew W. Mellon Foundation
Postdoctoral Fellowship in African or Slavic Studies
Research Librarianship

PURPOSE AND DESCRIPTION
Indiana University Bloomington Libraries is pleased to announce an academic-year post-doctoral fellowship program for the training of an African studies or Slavic studies research librarian. The program is supported by a grant from The Andrew W. Mellon Foundation and offers one nine-month fellowship (non-renewable) to a recent Ph.D., in any field specializing in either African or Slavic studies, who wishes to pursue a career in as an African or Slavic specialist in the United States. The program is affiliated with Indiana University’s Library along with its African Studies Program and its Russian and East European Institute, both of which serve as U.S. Department of Education, Title VI National Resource Centers.

Under the guidance of experienced librarians on the Bloomington campus, each fellow will participate in an apprenticeship, gaining knowledge of collection development, and public services work. In addition to developing a familiarity with the internal operations of a research library, the fellow will develop skills related to the selection of library resources and the provision of reference services. The fellow may also participate in selected activities of the academic program in African or Slavic studies; audit one or two courses at the School of Library and Information Science; visit libraries with significant collections in either African or Slavic studies; or prepare a paper for possible presentation at the annual meeting of the relevant area studies association.

One fellow will be selected in 2000-2001 in either African or Slavic studies contingent on the strength of the applicant pool.

QUALIFICATIONS
A recent Ph.D. in a field specializing in either African or Slavic studies is required, along with working knowledge in one of the vernacular languages. Demonstrated ability to work effectively with the wider academic community and strong written and oral communication skills. Evidence of interdisciplinary course work is desirable as well as prior experience working in a research library or knowledge of scholarly publishing and the booktrade. Candidates must be U.S. citizens or eligible for long-term employment in the United States.
Preference will be given to those candidates who, either in graduate school or in subsequent employment have developed a clear affinity for an alternative career path in research librarianship.

SALARY AND BENEFITS
The fellowship for 2000 is $28,500 (nine months). Indiana University offers a benefits package that includes medical and life insurance, a retirement plan, sick leave, and 9 holidays annually.

APPLICATION PROCEDURE
Candidates should submit a letter describing their training, experience, and interest, along with a resume and names of three references to Yolanda Cooper-Birdine, Indiana University, Libraries Human Resources Office, 1320 East Tenth Street, RM C-201, Bloomington, IN 47405-3907. Review of applications will begin May 3, 2000. The beginning date of the fellowship is flexible, but anticipated to be around September 1, 2000. Final candidates will be invited to interview on the Bloomington campus in the spring.

Indiana University is an Equal Opportunity/Affirmative Action Employer.

# REPRODUCTION RELEASE

## (Specific Document)

### I. DOCUMENT IDENTIFICATION:

**Title:** A YEAR IN THE LIFE OF AN AFRICANA FELLOW: THE MELLON FELLOWSHIP  
**Author(s):** Kuntz, Patricia S.  
**Corporate Source:**  
**Publication Date:** 2001

### II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce the identified document, please check one of the following options and sign at the bottom of the page.

<table>
<thead>
<tr>
<th>Level</th>
<th>Release Option</th>
<th>Permissions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Level 1 release, permitting reproduction in microfiche or other ERIC archival media (e.g., electronic) and paper copy.</td>
<td></td>
</tr>
<tr>
<td>2A</td>
<td>Level 2A release, permitting reproduction in microfiche and in electronic media for ERIC archival collection subscribers only.</td>
<td></td>
</tr>
<tr>
<td>2B</td>
<td>Level 2B release, permitting reproduction in microfiche only.</td>
<td></td>
</tr>
</tbody>
</table>

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.
