These two newsletter issues of the National Transition Alliance (NTA) for Youth with Disabilities present articles concerning the transition of youth with disabilities from school-to-work (STW) and related informational items. The first issue contains the following articles: "Bringing a Complicated System into Harmony" (focus on the School to Work Opportunities Act); "Knowledge, Production, and Synthesis" (a discussion of the NTA's efforts to identify effective STW activities); "The NTA Framework for Examining School-to-Work Practices" (the five-element model used by the NTA); "Customized, Data-Driven Technical Assistance"; and "Information Dissemination and Utilization." Also included are brief descriptions of the six organizations comprising the Alliance and a listing of resources including publications, organizations, and Web sites. The second issue contains the following articles: "Employing Partnerships in the School to Work Transition of Youth with Disabilities" (specific suggestions for recruiting employers); "Business and Community Resources"; "School to Work Opportunities Act"; "STW: A View from the States" (summaries of STW efforts in Vermont and Colorado); and "Student-Focused Planning and Development" (emphasis on practices toward this end). Also included are a list of conferences, names of the editorial advisory committee members, and snapshots from the organization's annual meeting. (DB)
Bringing a Complicated System into Harmony

Preparation all youth to become fully participating and contributing members of their communities presents a significant challenge to schools, communities, and states. The United States is the only industrialized nation in the world that has no formal school-to-work transition system. In fact, we can best characterize our nation's programs as a mosaic of programs designed to help students make the connection between school and work. Because we lack a unified school-to-work transition system, many of our nation's youth are unable to navigate successfully between their learning and work experiences. Successful school-to-work transition occurs when transitioning youth approach employment, postsecondary education, and independent living opportunities with competent skills and training needed to become lifelong learners.

When President Clinton signed the Act into law in May 1994, he conveyed the spirit of the law as "the American dream of opportunity for all." The promise of the Act is to expand and enrich opportunities for all youth to select and succeed in workplace, education, and training experiences. The intent of the Act is consistent with the transition requirements of the Individuals with Disabilities Education Act, or IDEA.

However, the promise of including all students is still not enough to guarantee students with disabilities access to and participation in the programs that are evolving. States and local programs can benefit from assistance in developing and implementing school-to-work transition systems that meet the needs of all students, including students with a diverse range of abilities. The National Transition Alliance for Youth with Disabilities (NTA) is designed to identify proven practices, evaluate transition program effectiveness, provide technical assistance, and prepare and disseminate information. Charged with information dissemination within the Alliance, the Academy for Educational Development (AED) brings you this first introduction to the NTA, its mission, members, and activities.

HARMONY Continued on page 4
The NTA believes that successful state and local school-to-work transition programs emerge from a strong foundation of research and best practices as well as through continuous program evaluation. Through the leadership of the Transition Research Institute at Illinois (TRI), the Alliance will engage in an ongoing search for models and programs that work. In addition, the Alliance will conduct program evaluation activities to broadly promote and disseminate these results about the effectiveness of emerging school-to-work activities to the nation.

Identifying Proven Practices and Information—a Framework for Examining School-to-Work Practices

The focus of these activities is to identify existing and emerging information about effective practices for school-to-work transition for youth with disabilities and, in concert with other NTA activities, to promote and disseminate these practices to emerging state and local school-to-work systems. Our immediate efforts are targeted towards identifying existing information about effective practices and programs and making these resources widely available. Over the next several years, the Alliance will focus on identifying emerging resources that add new knowledge about effective school-to-work programs and the application of these strategies for all youth.

Based on over ten years of research conducted by TRI, the NTA is developing a framework for examining effective school-to-work practices. The Institute’s Taxonomy for Transition Programming: Linking Research and Practice (1996), developed by Dr. Paula Kohler, serves as the basis for this emerging framework. The NTA framework for examining school-to-work practices is featured on page 6.

Evaluating School-to-Work Opportunities Systems

The Alliance is working with the National School-to-Work Office to support ongoing program evaluation activities to determine the effectiveness of emerging school-to-work systems. Our goal is to facilitate state access to comprehensive and inclusive evaluation systems that also appropriately address broad issues related to the participation of youth with disabilities in School-to-Work Opportunities Systems.

Based on the proven program evaluation track record of TRI, Dr. Frank Rusch is leading the NTA’s strategy for evaluating school-to-work program effectiveness. To date, the Alliance has reviewed the evaluation activities and status of 13 School-to-Work Opportunities Systems’ grantees. The Alliance is collaborating with these states by reviewing their evaluation activities related to youth with disabilities. Our goal is to develop a compilation of the various performance, outcome, and evaluation measures of all states. This information will be shared with the states and used to further the Alliance’s technical assistance and evaluation activities.

In addition to our direct work with the states, the Council of Chief State School Officers is updating their baseline survey data regarding participation of youth with disabilities in school-to-work systems. Dan Wiltrout, Senior Project Associate of the CCSSO’s Resource Center on Educational Equity, will be investigating how best to use this information in the NTA’s overall evaluation activities. This information will also be used to update the CCSSO’s popular publication, “Including Students with Disabilities in School-to-Work Opportunities” (1995).
Influenced by the passage of the School-to-Work Opportunities Act and the transition requirements under IDEA, the NTA was jointly funded in October 1995 by the United States Departments of Education and Labor. This Alliance promotes the transition of youth with disabilities, including severe disabilities, toward desired post-school experiences, including gainful employment, postsecondary education and training, and independent living. The NTA brings together universities, nonprofit service and business organizations, and national education associations in support of personnel working with youth making the transition from school to adult life. Together Goals 2000, the STWOA, and IDEA envision structural school system reform, and set high academic and occupational standards. The power of our unified energies, within the NTA, keeps these standards in the forefront of our mission.

Although educational systems strive to encourage students to master a set of skills, ultimately their goal is to empower youth to take responsibility for their own future. This is an evolving process for all students, especially those with a range of abilities. It is our mission to bridge between agencies and personnel providing services for transitioning youth and the rich resources and experiences that have emerged within the disability field.

Linked together, it is our hope that the NTA’s activities maximize opportunities for all youth in emerging school-to-work systems. Comprehensively, the NTA synthesizes knowledge gained through years of research, coordinates expertise in technical assistance, and shares this information with you, as we pilot our collaboration. It is our intent to connect you with more information, existing and emerging resources, and present a clear picture of this unified effort in support of transitioning youth, especially youth with disabilities, in school-to-work systems.
Through partnerships, the NTA meets the ever changing needs of our youth with disabilities in transition from school-to-work and postsecondary education and independent living. Collectively, the Alliance is a partnership among universities, nonprofit service and business organizations, and national education associations. Our members include:

**The Transition Research Institute at Illinois** — Established in 1985, TRI identifies effective practices, conducts intervention and evaluation research, and provides technical assistance activities that promote the successful transition of youth with disabilities from school to adult life. TRI also serves as an information resource for teachers, service providers, and researchers statewide, nationally, and internationally. Tri-talk, established by the Institute, is an electronic discussion group on the Internet devoted to transition information exchange. TRI currently provides technical assistance and evaluation services to over 80 model demonstration and research projects currently funded by the U.S. Department of Education, Office of Special Education and Rehabilitative Services.

**The National Transition Network** — Located at the Institute on Community Integration at the University of Minnesota, the NTN was established in 1992 to provide technical assistance and evaluation services to states implementing statewide systems change projects on transition for youth with disabilities. Through its efforts, the NTN provides assistance to 35 statewide systems change projects currently funded by the U.S. Department of Education, Office of Special Education and Rehabilitative Services.

**The Academy for Educational Development** — Founded in 1961, AED is an independent, nonprofit service organization committed to addressing human development needs in the United States and throughout the world. In partnership with its clients, the Academy seeks to meet today’s social, economic, and environmental challenges through education and human resource development; to apply state-of-the-art education, training, technical assistance, research, technology, management, and behavioral analysis, and social marketing techniques to solve problems; and to improve knowledge and skills throughout the world as the most effective means for stimulating growth, reducing poverty, and promoting democratic and humanitarian ideas.

**The Council of Chief State School Officers** — An independent council since 1927, CCSSO comprises public officials who lead departments responsible for elementary and secondary education in the states, U.S. extra-state jurisdictions, the District of Columbia, and the Department of Defense Schools. CCSSO seeks its members’ consensus on major education issues and expresses their views to civic and professional organizations, federal agencies, to Congress, and to the public. The CCSSO Resource Center on Educational Equity is responsible for managing and staffing a variety of CCSSO leadership initiatives working to assure education success for all children and youth, especially those placed at risk of school failure.

**The National Association of State Directors of Special Education** — A nonprofit organization, founded in 1939, NASDSE’s primary purpose is to promote and support special education programs in the United States and outlying areas. NASDSE provides services to state agencies to facilitate their efforts in maximizing educational outcomes for individuals with disabilities. NASDSE provides technical assistance to state education agencies particularly in collaboration with a variety of educational and human service organizations.

**The National Alliance of Business** — A business-led nonprofit organization, founded in 1968, NAB is dedicated to building a quality workforce that meets the needs of employers. NAB works with the nation’s business leaders as they take an active role in building an internationally competitive workforce through education reform and enhanced job training. NAB directs programs, creates awareness, shapes public policy, and builds coalitions and partnerships.
The NTA Framework for Examining School-to-Work Practices

This framework is in its early design stage; however, it provides a brief glimpse of what you might expect to see in the near future.

Focus on planning and developing educational programs for individual students.

- **Career Pathways and Contextual Learning** features school-based and work-based curricula and activities that relate to career exploration and development.

- **Family Involvement** highlights practices that revolve around parent and family involvement in planning and delivering education and transition services, and facilitating such involvement.

- **Business and Community Resources** includes practices that facilitate participation by business, labor unions, community service agencies, youth development organizations, government agencies, and other community resources in all aspects of school-to-work systems.

The framework features five broad categories of practices. Collaboration, in its many and varied forms, serves as an important connection within and among each of these categories. The categories include:

- **Structures and Policies** represents program practices and characteristics that relate to the effective and efficient delivery of school-to-work transition services.

- **Student-Focused Planning and Development** includes practices that

The activities for identifying effective school-to-work practices are being enhanced by a panel of experts who will validate and expand the framework. The NTA is casting a wide net to identify models through database searches, reviews of existing literature, networking, and individual solicitation. To date, we have identified over 140 programs. Information about these programs is being compiled into "user-friendly" formats to facilitate synthesis and dissemination. If you have an effective model program that you'd like us to include in our analysis, please contact Dr. Paula Kohler, at the Transition Research Institute.
The NTA promotes networking and information sharing surrounding technical assistance activities. The Alliance coordinates technical assistance in two areas: to School-to-Work Opportunities in Development and Implementation States and to the model projects funded by the Office of Special and Rehabilitative Services (OSERS).

Currently, technical assistance to Development and Implementation States is led by staff at one of our partnering organizations, the National Transition Network (NTN). The major goal is to ensure that these states have access to a comprehensive range of consultation, technical assistance, information, and opportunities to network and share information concerning their projects with other School-to-Work initiatives within states. In addition to conducting needs assessments in states, NTN coordinates efforts with other technical assistance providers including the Regional Resource and Federal Centers for Special Education, State Systems Change Grantees, and the National School-to-Work Office.

Regular communication with contact people in school-to-work systems is established so that needs assessments can be made and technical assistance plans developed. Action plans to identify strategies for including youth with disabilities in emerging school-to-work programs and services are developed through this regular communication. Also, state and local team partnership building workshops are conducted. Further coordination of technical assistance and planning with National School-to-Work Office, Rehabilitative Services Administration, Office of Special Education Programs, State Systems Change Grantees, and Regional Resource, and Federal Centers.

Our unified efforts within the Alliance will capitalize on the benefits of networking and information sharing among our partners and other national organizations providing technical assistance. The NTA sponsors annual conferences and forums to facilitate idea exchanges and encourages organizations to work together to share experiences and identify strategies for coordination and collaboration. Coordinated activities are planned with the Academy for Educational Development (AED), Council of Chief State School Officers (CCSSO), the National Alliance of Business (NAB), and the National Association of State Directors of Special Education (NASDSE).

Another Alliance Partner, the Transition Research Institute (TRI) supports technical assistance to over 80 OSERS-funded transition model demonstration projects that is focused on strengthening program evaluation. The Transition Research Institute reports that the goal of evaluation technical assistance involves such areas as evaluation design, management, instrumentation, data collection methods, data analysis evaluation, utilization, and dissemination.

Major Technical Assistance Activities include:

- Coordinating technical assistance and planning across National School-to-Work Office, Rehabilitative Services Administration, Office of Special Education Programs, State Systems Change Grantees, and Regional Resource, and Federal Centers
- Conducting needs assessments and developing formal technical assistance plans
- Providing technical assistance to school-to-work development and implementation grantees
- Promoting successful state and local school-to-work activities and linking to comprehensive state systems change activities
- Evaluating the impact of technical assistance

DATA Continued on page 8
Many different questions are asked by personnel working with youth in school-to-work systems.

Here are some examples of what states are asking from technical assistance providers:

How do we access assistance on our state team regarding issues surrounding partners at the regional and local level?

Can you help prepare briefing materials and resource listings to define and assess the quality of work-based learning activities for students?

Will you assist in facilitating a meeting of key stakeholders to develop a vision for STW in our state?

How can we find out about the implications of federal block grants on STW systems and career and technology education?

We need in-service training for our vocational district, student services, and curriculum directors. Can you help?

How can we develop our own occupational skills standards and use the curriculum framework and performance standards?

How can we build our local partnerships?

Can you help us design strategies to continue project activities after the funding ends?

What are some effective strategies to include students with disabilities in school-to-work activities?

What are strategies involving employers as partners?
Information Dissemination and Utilization

One of the primary goals of the NTA is to connect usable and useful information to the people who need it. Through the Academy for Educational Development (AED) the Alliance engages in a range of activities to prepare information on how best to fulfill the secondary education needs of youth, and establishes linkages to universally available communication systems that promote dissemination of such information. The NTA plans to promote the availability and use of information through its annual Project Directors Meeting and a national forum in 1997. You might also see the NTA display at national, state, and local meetings and conferences throughout the year. We hope that you will take advantage of our materials and resources.

As you will find in our publications section below, the NTA is identifying relevant resources and materials, building an electronic information exchange network, and developing publications for broad dissemination. We expect that these activities will provide high quality and relevant technical assistance to promote practices which enhance the participation of youth with disabilities in school-to-work systems.

If you have resources or products to share, ideas about topics and issues to include in our publications, or would just like to make suggestions that will assist us in making our products more "user-friendly," please contact Dr. Richard Horne at the Academy for Educational Development.

National Transition Alliance Mission

The mission of the National Transition Alliance for Youth with Disabilities is to ensure that youth with disabilities, including those with severe disabilities, acquire skills and knowledge, gain experience, and receive services and supports necessary to achieve successful post school outcomes, including postsecondary education, gainful employment, independent living, community living, social integration, and lifelong learning. The National Transition Alliance seeks the formation of one education system that benefits from the lessons learned from special education, regular education, and vocational education.

A note from the Editor

The Alliance News welcomes article submissions for future quarterly publications. Deadline for the September newsletter is July 15, 1996. Thanks to our contributors, this first issue brings you an overview of the NTA and highlights some of our activities. We welcome your comments, questions, feedback or requests for future articles of interest. Please send to my attention via E-mail to:

Employer Partnerships in the School to Work Transition of Youth with Disabilities

“How do I build effective partnerships with employers?”
This is one of the most frequently asked questions of the National Transition Alliance and one of the most important, for without significant employer participation, school to work will fail. This article explores the critical aspects that school to work developers might consider when building and sustaining employer partnerships. Hopefully, these ideas will stimulate the development of outreach and educational activities targeted to the employer community.

Getting to Know Your Employers
No single compelling reason exists for employer involvement in transition programs. While there is no magic formula, a confluence of issues can convince an employer of the benefits of school to work. Some issues may include an employer’s need for a high quality workforce, a concern with the quality and modernity of the educational system, and the repercussions of this system on the economic health of the community. Employers may seek to diversify their workforce and comply with state and federal law, such as the Americans with Disabilities Act, while many others ascribe personal reasons for their participation, including experience with a family member who has a disability. Also, keep in mind that school to work is not on the radar of most employers. Therefore, it is critical to understand first, the concerns and needs of the employer community before presenting school to work. Communication is vital to tailoring a program’s activities and services to the employment culture in any particular local area. It is dangerous to assume that the employer community is a monolithic group. Small and midsized firms often grapple with vastly different issues from large firms and concerns vary across industries. Constantly listening to the employer and developing a school to work initiative that responds and is sensitive to employers’ needs, will go a long way. Help the employer see that you are not only asking for their participation, but that you are providing them with a service.

How to Recruit Employers
Once you understand your employer’s needs, you must develop a strategy to show him or her how hiring students with disabilities will be an advantage.

Here are four approaches:

✓ Clearly Define Roles and Responsibilities
Ask yourself what role employers will play in developing and delivering worksite opportunities for young people. Keep in mind the program goals, the program scale, and the priorities of leading employers.

Target Employers that are Most Likely to Participate

As with any marketing effort, successful employer recruitment requires getting the message right and sending it to the right audience. Differentiate among the small, midsized and large firms and firms in different industries. Also, look at their history of school-business partnerships, previous records of commitment and leadership with their community, and familiarity with work-based learning models.

Approach Employers in Ways They Trust

If employers are to take their involvement in school to work to meaningful levels, they must feel ownership toward the program. Involve employers early in the partnership by giving them significant responsibility; be able to answer their concerns; use business leaders to recruit peers; and use the credibility of a business intermediary organization, like the National Alliance of Business, to assist in the recruitment.

Maintain and Deepen Employer Participation

Firms that commit to one level of participation might be persuaded to extend that involvement over time, especially as they grow more comfortable and confident in their role. Involve them in ongoing, standing bodies that govern program policy; reward them for their contributions; have them speak for the program and the work-based learning at the local, state and national levels. Continually engage them.

Help Employers Make the Transition

Employers need preparation, orientation and support to recruit and integrate students with disabilities into the workplace. They are concerned with the amount of paperwork and bureaucracy involved. They are also uncertain about whether individuals with disabilities can do the job. Help employers understand that Partnerships mean that youth entering the workplace are equipped with industry based competencies. Employer's concerns become valid unless school programs begin to present youth as skilled individuals ready for the workplace. Employer validated skills must become apparent for success to occur in school to work transitions.

Employers sometimes lack the knowledge of how to accommodate for an individual's needs. They need accurate and honest information about the youth. In addition, clear information about partnership support will facilitate success. Educational jargon is enough to frighten even the hardest of school to work advocates. Specific activities of the program should be explained to employers in simple language. Finally, any good relationship takes dedication and investment to develop. This means working through the problems and celebrating the successes!

Program Resources for School Business Partnerships

**Business and Education Transition Alliance (BETA)**
The Program Effectiveness Panel, (PEP), a U.S. Department of Education’s primary mechanism for the validation of educational program effectiveness, judged BETA as a model school to work transition program. BETA is a school to work transition program that meets the employment needs of at-risk youth, including those with disabilities, and also the needs of employers for well-trained, entry level employees.

Many programs using best practices and state of the art partnership strategies evolve. These are a few examples of programs that have successfully included youth with disabilities in transition from school to work systems.

**Bridges from School-to-Work**
Develops internships with area businesses for students with disabilities in their final year of high school. Bridges gives students job training and work experience that enhance work potential and helps local employers gain access to another source of employees.

**Job Accommodation Network (JAN)**
JAN is an international network and consulting resource for accommodating persons with disabilities in the workplace. JAN is a joint venture with the President’s Committee on Employment of People with Disabilities. Call (800) JAN-7234 in the US for more information.

**Youth Transition Program (YTP)**
Policy makers and practitioners across the country agree that the creation of a seamless school to work system for youth requires restructuring systems, but Oregon is one of a few states that have begun restructuring on a state wide level. Oregon’s Youth Transition Program is a collaborative effort among the Oregon Department of Education, Oregon Vocational Rehabilitation Division, University of Oregon and public schools in local communities across the state. YTP currently operates in 26 sites across Oregon, helping youth with disabilities make the transition from school to work. YTP aims to provide a “new pattern of services” to students with disabilities by achieving two goals: enhancing the ability of students to enter competitive employment after leaving school and creating systemic change within schools and agencies serving students with disabilities.

Worksource Enterprises

Worksource Enterprises works jointly with Charlottesville, Virginia city schools, the Community Rehabilitation Program and the Private Industry Council to meld these resources and structure successful experiences for ALL students, especially students at-risk of dropping out of school. Competitive Employment Work Adjustment Training, CEWAT, based in Charlottesville High School in Virginia, was initially created to help students with disabilities find paid job placements and develop good work behaviors. CEWAT provides job coaches who work with students to help them identify job prospects, apply for employment and negotiate any difficulties that arise after they are hired. Contact Lee-Davis Brown a Vocational Planner with the Office of Career Training, (804) 296-5131 for more information.

Additional Resources for School Business Partnerships

The ARC. The Road To Opportunity. Arlington, TX: Author. Developed by national leaders in the area of employment for people with mental retardation, the book discusses accurate information on ADA, and how it relates to employing people with mental retardation, helpful tips on finding, hiring, and training workers, and included are an abundant of useful resources. [ARC Publications, PO Box 1047, Arlington, TX, 76004; (817) 261-6003]

---

**Benefits to Employers**

- Qualified and skilled workers
- Built-in effective screening mechanisms to assess the technical, work readiness, and academic skills of the students
- Diversity of the workforce
- An opportunity to cross-train current employees as the students take on some of their responsibilities—essentially creating career ladders for existing employees
- Networking with other employers in their area
- Increase company's visibility in their community
- Direct support to employers and students plus additional resources to the employer—training, problem solving, information, community visibility, natural supports, etc.
- Financial benefits—tax incentives, subsidized wages, reimbursement for extra costs of training and supervising students to compensate for loss of productivity for skilled workers who train or mentor students
The School-to-Work Opportunities Act (STWOA) of 1994 creates a tremendous opportunity for collaboration among schools, communities and businesses. It brings industry into the classroom. It promotes lifelong learning that begins in the school and extends into the workplace. Learners of all ages, races, cultures, and abilities have increased opportunities to pursue postsecondary education and training in preparation for high skilled, high wage careers and independent living.

School to work is designed to involve business and community resources in three main areas: school-based learning, work-based learning and connecting activities. School-based learning includes a variety of programs and services designed to help all students attain high academic and occupational standards. These programs are designed to expose students to a broad array of career opportunities. School-based learning facilitates the selection of career majors based on individual interests, preferences, strengths and abilities.

The school-based learning component includes career awareness and exploration and counseling to identify career interests and goals; selection of career major by the 11th grade; a program of study designed to meet the standards set by Goals 2000: Educate America Act; integration of academic and vocational learning and regularly scheduled student evaluations.

The work-based learning component stresses the importance of the workplace as an active learning environment in the educational process. Making comprehensive work programs available to students is one of the mandatory provisions of the Act. Employers and educators become partners in extending opportunities for all students to participate in high-quality, work-based experiences while they are still in school. The work-based learning component may include a planned program of job training or work experiences through worksite involvement by students and teachers. In addition, it includes paid work experience, workplace mentoring, and instruction in overall workplace competencies.

Connecting activities encourage the broad participation of community representatives, including employers, parents, students, community organizations, secondary and postsecondary schools, and other public and private entities. These activities coordinate the involvement to create an ongoing communication network.

Connecting activities include matching students with employers, serving as liaison between the employer and school, teachers, parents and other community partners, and linking youth development activities with employer and industry strategies for upgrading employee skills.

STVWA-Vi4-14fates

The NTA interviewed states that are integrating the STWOA three core components in their school to work activities. We bring you highlights from these innovative systems. It is our hope to continue to spotlight successful systemic strategies found in school to work systems across the United States. The following section discusses two states and their philosophies and strategies for including youth with disabilities in school to work opportunities.

In an interview with Bill Sugarman from the Center for Transition and Employment, the NTA learned about school to work enterprises in Vermont. Consortiums from around the state comprise people from both special and regular education. Comprehensively, this promotes an understanding of both special and regular education and wins a good beginning for collaboration. From the top down, regional partnerships pursued funding to increase regional capacity to serve all youth. This brief summary focuses on Vermont’s School to Work Initiative and Consortium and its activities at the state and regional levels.

Vermont organized four lead partners to create school to work systems. They are the State Chamber of Commerce, the Department of Education, Vermont State Colleges and the Department of Employment and Training. Additionally, the state school to work system collaborates with the University of Vermont and the Vermont Student Assistance Corporation. Robin Morton represents the Business Education Partnerships. She designed work-based mentoring opportunities for all youth in transition from school to work. In addition, Robin trains school support staff, employers, and lead partners in maintaining successful partnerships and creating work-based activities such as job mentoring. Examples of effective practices in school to work activities, such as mentoring, occur between Wyeth Nutritionals and the Georgia Elementary Schools. Integrated applied academic activities of Lynn Bondurant at the Smokey House Project illustrate some ongoing connecting and work-based learning activities for youth with disabilities. These activities help bridge school-based learning to real-life workplace experiences for all youth.

One goal of Vermont’s state plan is to use existing programs and make generic offerings successful by making them accessible to youth with disabilities. One example is the Vermont State Teams for Children and Families. These teams encourage parent participation and actively recruit families and individuals with disabilities to participate.

Even before STWOA, Vermont improved their provision of employment support at the local and regional high school level. This ensured that youth with disabilities were included in employment and other work-based activities. In Harwood, Duxbury High school exemplifies this improvement. Often funding is the divisive factor in keeping education systems separate. Harwood has broken down funding barriers and integrated lessons learned from special and regular education. One of its goals is to make sure that all program offerings are generic and accessible for active participation of all youth.

Next Steps expands horizons for youth!

An example of school-based learning that occurs in a secondary education setting is an elective called “Human Relations at Work.” In the classroom, students learn about how to be a good supervisor and a good employee. The “Harwood Union Next Step” employment program provides transition services for the 750 students of a local high-school in Moretown, Vermont. With help from “Next Steps” the business community is recognizing Harwood as a resource for employees. This creates broader exposure of work experiences from a variety of industries for ALL youth.

To learn more about innovative school to work transitions for all youth, especially youth with disabilities, contact: Jeanie Crosby - State School to Work Coordinator (802) 828-3326.

Basically, people fall into one to three categories:

Those of us who make things happen

Those of us who let things happen

and those of us who say: what the heck happened!

J.D. Hoye, 1996

Naturally, our participants at this Project Directors meeting are "...people who make things happen". What an incredible turnout!
Colorado approaches school to work from a systemic rather than a localized programmatic view. The philosophy of including children with disabilities in neighborhood schools, regardless of the severity of a child’s disability, ensures that Colorado embraces ALL students. The Colorado Systems Change Project for youth with disabilities uses a systemic or capacity building design that works with every community in the state. The same focus guides the Colorado School to Career initiative, developing a comprehensive approach to build an integrated systems state wide. Rather than having special populations represented in separate groups, Colorado includes representatives from diverse populations and related professionals on all working committees at every level. Thus, all populations are represented across the board from the design stage to implementation.

Colorado’s strength in coordinating involvement of employers, schools and students ensures business involvement. Committees related to school to work issues include “seasoned” employers, those experienced in employing youth with disabilities. Whenever local grants became available, they require that the transition interagency/governing boards for youth with disabilities work as partners. Local level partnerships must make sure that programs for youth with disabilities using the same strategies, include representation from diverse populations on integrated work groups.

In its last year of a five-year grant, Colorado is reframing its system change initiative for youth with disabilities toward alignment with school to work. This ensures that best practices and key personnel are used and integrated within the system. Colorado makes up teams of very powerful players: key people must be involved in the partnership from the beginning.

For specific program information, please contact Susan McAlonan with the Colorado Department of Education, 201 East Colfax Avenue, Denver, Colorado 80203; (303) 866-6715.

The NTA extends a special thanks to those who graciously responded to our request in such detail and within a short time. Without your patience and influence this spotlight would not have been possible. Look for future spotlights from Iowa, New Jersey, New York, Oregon, and Kentucky in upcoming issues of the Alliance.

982 Eastern Parkway, Box 18, Louisville, KY 40217, (502) 637-7363
In the last issue of the Alliance, we introduced the NTA Framework. This framework emerged from more than ten years of research conducted by the Transition Research Institute at Illinois (TRI). Its purpose facilitates the planning, development, and evaluation of school to work systems that address the needs of all students, particularly youth with disabilities. The framework features five broad categories of practices, as shown in this diagram. These include Structures and Policies, Student-Focused Planning and Development, Career Pathways and Contextual Learning, Family Involvement, and Business and Community Resources. Collaboration in all of its varied forms, serves as an important connection among the categories. This article highlights practices reflected in Student-Focused Planning and Development and its contribution to effective school to work programs.

The framework, developed for the NTA, recognizes student-focused planning and development as one component of effective school to work programs. Student-focused planning and development includes elements that focus on planning and developing educational programs for individual students. By examining effective transition programs for youth with disabilities, TRI has distinguished six elements reflected in student-focused planning and development: Life Skills Instruction, Individual Education and Career Plan Development, Student Participation, Planning Strategies, Assessment, and Support Services.

Life Skills Instruction includes activities in leisure skills and social skills training, self-determination and self advocacy training. Students must develop strong skills in these areas to communicate their personal interests and strengths when confronted with further education or employment opportunities. Self determination, one principle affecting success for students is defined by Ward (1988) as “the attitudes which lead people to define goals for themselves and the ability to take the initiative to achieve those goals”.

Individual Education and Career Plan Development identifies measurable goals and objectives for each area of consideration: postsecondary education, vocation and community related objectives, residential and recreational and leisure goals. Attainment of goals is reviewed annually. To ensure that effective student-focused planning occurs, Student Participation is a critical component. It shifts the focus to a student driven process with documentation of students interests and preferences. Career counseling services provided to the student encourage full participation. Self-determination facilitated within the planning process paves the way for full student participation.

In Planning Strategies, a team including the student, family members, school and participating agency personnel, and a planning team leader, must be identified. Accommodations of the student’s communication needs are considered during the planning stage. Additionally, a meeting time and place conducive to student and family participation are arranged.

An authentic Assessment method evaluating vocational, academic, cognitive, and adaptive behavior is an integral part of student-focused planning and development. Finally Support Services must be in place to identify and develop environmental adaptations, accommodations, and natural support systems. Any assistive technology devices, or additional related services would be added during this stage of planning.

Individualized planning is the key to effectively match a student’s educational program and school experiences to his or her post-school goals. Student participation in this process is essential, and self-determination skills are fundamental. A resource section created at the end of this article details further information regarding self-determination skills and student-focused planning and development.

Watch for our announcement about the 12th Annual Project Director’s Meeting coming this Spring, 1997 and the NTA Forum, planned for the Fall, 1997.
National Transition Alliance Mission

The mission of the National Transition Alliance for Youth with Disabilities is to ensure that youth with disabilities, including those with severe disabilities, acquire skills and knowledge, gain experience, and receive services and supports necessary to achieve successful post school outcomes, including postsecondary education, gainful employment, independent living, community living, social integration, and lifelong learning. The National Transition Alliance seeks the formation of one education system that benefits from the lessons learned from special education, regular education, and vocational education.

Article Contributors:

Richard Horne, Alliance Co-Director
Academy for Educational Development (AED)

Paula Kohler, Senior Research Associate
Transition Research Institute (TRI)

Peter Joyce, Vice President

Esther Hong, Program Analyst
National Alliance of Business (NAB)

Lawrence Dennis, Project L.I.F.E. Consultant
Ohio State Department of Education

The Alliance welcomes article submissions for future quarterly publications. Deadline for the December issue is October 15, 1996. Please send information, comments, questions or requests to the editor’s attention via e-mail or fax:
tdivita@aed.org
(202) 884-8443 fax
Please call (202) 884-8210 if you wish to speak to Therese Divita, Writer/Editor.

Special thanks to the NTA editorial support team, Jean Kohanek and Kathy Wilson for their assistance in writing and editing interviews and various sections in this issue.
