An initiative of the Open Society Institute (OSI) and the International Reading Association (IRA), Reading and Writing for Critical Thinking (RWCT) promotes classroom teaching practices that help students learn actively, think critically, and work cooperatively. It offers an integrated program of staff development, activities for teachers of the primary grades through high schools, and educators from teacher-training centers, school inspectorates, and national ministries. RWCT focuses on methods of teaching, rather than any particular curriculum. In each country joining the RWCT network, four volunteers from the IRA are assigned to work with the in-country coordinators. RWCT seeks to align its teacher education efforts with those in existing institutions and to develop collaborative relationships between and among professional groups of several kinds: higher education; teacher centers; professional development schools; ministries of education; and the professional community. RWCT training is presented in nine courses: a framework for active learning and critical thinking; methods for promoting critical thinking; reading/writing/discussion in every discipline; further strategies for promoting critical thinking; cooperative learning; lesson planning and assessment; writing workshop: from self-expression to written arguments; creating thoughtful readers; and becoming trainers. (PM)
Building open societies

The Reading and Writing for Critical Thinking Project (RWCT) is based on the idea that democratic practices in schools play an important role in the transition toward more open societies. Active in 20 countries of Central and Eastern Europe and the former Soviet Union, RWCT introduces research-based instructional methods to teachers and teacher educators. These methods are designed to help students think reflectively, take ownership for their personal learning, understand the logic of arguments, listen attentively, debate confidently, and become independent, lifelong learners. The program can be used in all grades and subjects with existing curricula.

The RWCT program is an initiative of the Open Society Institute (OSI), which promotes worldwide educational, social and legal reform, and the International Reading Association, a nongovernmental organization of professional educators. These groups work in close collaboration with the 20 national Soros Foundations in participating countries. Faculty from the University of Northern Iowa, Cedar Falls, Iowa, and the College of William and Mary, Williamsburg, Virginia, provide leadership and direction. In addition, RWCT enlists more than 70 professional educators who volunteer to serve in-country as workshop leaders, delivering a comprehensive series of professional activities to participants.

"At RWCT workshops we learn to treat students as human beings who have their own experiences and knowledge to share."

RWCT methods are adapted for classrooms in order to promote

active inquiry
student-initiated learning
problem-solving
critical thinking
cooperative learning
writing and reading processes
alternative assessments

RWCT participant, Ukraine
Designed for many different settings and contexts, the RWCT framework is

- **Classroom-based**
  Participants leave RWCT workshops ready to implement the strategies in their own classrooms.

- **Flexible**
  RWCT is effectively implemented in primary and secondary classrooms, in pedagogical high schools, and in university classrooms, across many disciplines in 20 different countries.

- **Adaptable to local conditions**
  RWCT is designed for use with existing curricula and existing materials.

- **Designed to build local capacity**
  Mentored by a select group of international educators, RWCT builds a corps of skilled in-country teacher trainers, giving each country the capacity for national expansion.

"Students appear to feel more comfortable using creative and higher order thinking."

—RWCT participant, Kyrgyzstan

RWCT institutionalizes change

In each country joining the RWCT network, four volunteers from the International Reading Association, experts in the methods they present, are assigned to work with the in-country leadership team. Participants for the project are chosen by the in-country coordinators. They typically represent university faculty, members of the district inspectorate of the Ministry of Education, trainers from inservice teacher training institutes, and outstanding classroom teachers, able to eventually demonstrate and teach these methods to others.

RWCT is based on a "train the trainer" model. Volunteers offer a series of five workshops over a 12 to 18 month period. During this time participants practice the methods demonstrated, adapt them to their own classrooms and circumstances, and substitute national texts for those introduced in training workshops. They also meet on a monthly basis with colleagues to discuss their progress, and are observed by peers and RWCT volunteers in the classroom. Although the volunteers are experts in the teaching methods they present, each realizes that local educators' knowledge is critical to the overall success of the project. RWCT is designed to invite modifications that resonate within each country.

In Year 2, the first generation participants begin to train other teachers. The cadre of trainers is increased as selected second generation participants also become part of the local leadership core. To increase the efficacy of the dissemination effort and to ensure institutionalization, an institutionalization strategy is developed within each country. In Year 3, volunteers work to support that particular strategy.
RWCT institutionalizes change

RWCT seeks to align its teacher education efforts with those in existing institutions and to develop collaborative relationships between and among professional groups of several kinds:

**Higher Education**
Involving higher education faculty as program participants and advocates is a goal in every country. RWCT encourages teaching with and the endorsement of active methods in degree programs for teachers.

**Teacher Centers**
RWCT seeks to establish teacher training centers as sites for learning about and practicing active methods.

**Professional Development Schools**
In a number of countries, schools with a significant proportion of teacher educators familiar with RWCT methodologies serve as demonstration sites for both preservice and inservice teachers.

**Ministries of Education**
In nearly all of the countries in which RWCT operates, significant educational reforms are under way at the Ministry level. These teacher education reforms are often compatible with the goals and practices of RWCT. Through official endorsement by Ministries, teachers accrue credit for RWCT courses, and may eventually gain release time and other compensation for their RWCT work.

**The Professional Community**
As local associations and NGOs take increasing responsibility for RWCT, leadership opportunities, publications, and conferences develop. Thus the professional community is strengthened, and a forum for the exchange of information and ideas is created. For example:

- **Journal** - In order to institutionalize a new professional culture and development opportunities in the region, a quarterly peer-reviewed journal, The Thinking Classroom, is produced and distributed in English and Russian. National language editions are also produced in select countries. For more information about the journal, visit the RWCT website at www.uni.edu/coe/rwct.

- **Conferences** - Opportunities to network with other education professionals and exchange experiences, research, and lessons learned through regional and national-level conferences are an integral part of RWCT's institutionalization efforts.

Monitoring and assessment are important components of every RWCT project. In conjunction with each training workshop, teacher educators visit participants' classrooms and meet to discuss implementation of the methods and strategies introduced. A number of rubrics have been developed to help assess progress and provide feedback.

After each visit by RWCT volunteers, a trip report detailing progress and setting out new goals is prepared and used by RWCT administrators and OSI staff to monitor the project. At present, a formal evaluation of the program is underway. Both teacher performance and student outcomes are being assessed.

**Standards for RWCT certification for both teachers and trainers have been developed by an international board. Participants are awarded certification based on their understanding and practice of RWCT methods.**

Before participants are certified as trainers they must present evidence of a working familiarity with RWCT methods as well as an understanding of the project's purposes. Many teacher trainers have created portfolios, videotaped lessons, collected student work samples, and engaged with more experienced staff in extensive interviews.
RWCT provides comprehensive training

RWCT training is presented in nine courses. The courses are delivered in five (4-5 day) sessions during a 12 to 15 month period. Each of the first eight courses addresses teaching strategies. The ninth course focuses on becoming a trainer. The content of each methods course is described in a guidebook of 60 to 100 pages, which has been translated into the participants' national language (eighteen languages, at present).

The workshops are designed to model interactive instruction and learning. They are built around demonstration lessons, with opportunities for discussion, practice, and questions.

Course descriptions

1. A Framework for Active Learning and Critical Thinking

Presents the rationale for critical thinking and interactive learning, and demonstrates a research-based three-phase model for organizing teaching and learning. In phase one, students are encouraged to consider their assumptions about a topic, and frame their questions about it. In phase two, the lesson proper, students actively inquire into the topic. The third, "reflection" phase, encourages students to consider what they have learned and compare it to their prior assumptions, question and debate the claims of the material, consider its implications, think of the topic in different ways, or apply the ideas to new situations. In this course teachers learn a preliminary set of teaching strategies for applying this three-part model. By the time they have completed the course, they will have learned more than 60 such alternative strategies, for use with different materials for different purposes.
Methods for Promoting Critical Thinking

Presents ways of using different levels of questions to evoke discussion. These range from "lower order" questions of fact and comprehension to "higher order" questions that ask students to use ideas to solve problems, compare different points of view, and evaluate responses.

Reading/Writing/Discussion in Every Discipline

Stressing the interrelatedness of the language skills (reading, writing, speaking, and listening) in an interactive classroom, the course focuses on techniques for all subjects that use reading and writing as means of learning. The course also demonstrates ways to enliven lectures with questions that heighten student engagement and original thought.

Further Strategies for Promoting Critical Thinking

Revisiting the RWCT project's three-part teaching model, this course presents further methods for use in all three phases. Here teachers learn strategies for encouraging discussion, strategies for debate and for the analysis of arguments, and ways of using these techniques to rehearse argumentative essays.

Cooperative Learning

Methods of cooperative learning help students learn material more thoroughly and deeply, and also cultivate respectful relationships among students. Cooperative learning techniques are introduced and reinforced throughout the courses. This course shares a host of strategies for giving students active roles in helping each other learn.

Lesson Planning and Assessment

As RWCT teachers seek ways to promote critical thinking and active learning at the same time they teach their standard curriculum, time is always a constraint. This workshop presents a lesson-planning model that allows teachers to teach the required content, and at the same time helps students to inquire and reflect. RWCT methodologies also help teachers who value independence and creativity to assess progress and assign grades.

“Students are taking more risks in learning and communicating.”
