Hawaii Department of Education

Consolidated State Application
Accountability Workbook

for State Grants under Title IX, Part C, Section 9302 of the Elementary and Secondary Education Act (Public Law 107-110)

APPROVED by USDOE on May 28, 2003

Amended, with Approval
August 6, 2003 (Critical Elements 3.2 and 4.1)

Amended, with Approval
July 28, 2004 (Critical Elements 2.1, 3.2, 5.3, 5.4, 7.2, and 10.1)

Amended, with Approval
July 5, 2005 (Critical Elements 1.1, 3.2, 5.4, 5.5, and 9.1)

Amended, with Approval
May 22, 2006 (Critical Elements 1.1 to 10.2)

Amended, with Approval
June 22, 2006 (Critical Element 5.3)

Final Information
As of June 22, 2006

U. S. Department of Education
Office of Elementary and Secondary Education
Washington, D.C. 20202
PART I: Summary of Required Elements for State Accountability Systems

Instructions

The following chart is an overview of States' implementation of the critical elements required for approval of their State accountability systems. States must provide detailed implementation information for each of these elements in Part II of this Consolidated State Application Accountability Workbook.

For each of the elements listed in the following chart, States should indicate the current implementation status in their State using the following legend:

F: State has a final policy, approved by all the required entities in the State (e.g., State Board of Education, State Legislature), for implementing this element in its accountability system.

P: State has a proposed policy for implementing this element in its accountability system, but must still receive approval by required entities in the State (e.g., State Board of Education, State Legislature).

W: State is still working on formulating a policy to implement this element in its accountability system.
### Summary of Implementation Status for Required Elements of State Accountability Systems

PART II: State Response and Activities for Meeting State Accountability System Requirements

Instructions

In Part II of this Workbook, States are to provide detailed information for each of the critical elements required for State accountability systems. States should answer the questions asked about each of the critical elements in the State’s accountability system. States that do not have final approval for any of these elements or that have not finalized a decision on these elements by January 31, 2003, should, when completing this section of the Workbook, indicate the status of each element that is not yet official State policy and provide the anticipated date by which the proposed policy will become effective. In each of these cases, States must include a timeline of steps to complete to ensure that such elements are in place by May 1, 2003, and implemented during the 2002-2003 school year. By no later than May 1, 2003, States must submit to the Department final information for all sections of the Consolidated State Application Accountability Workbook.
**PRINCIPLE 1. A single statewide Accountability System applied to all public schools and LEAs.**

<table>

<tbody>
<tr>
<td>1.1</td>
<td>Every public school and LEA is required to make adequate yearly progress and is included in the State Accountability System. State has a definition of &quot;public school&quot; and &quot;LEA&quot; for AYP accountability purposes. The State Accountability System produces AYP decisions for all public schools, including public schools with variant grade configurations (e.g., K-12), public schools that serve special populations (e.g., alternative public schools, juvenile institutions, state public schools for the blind) and public charter schools. It also holds accountable public schools with no grades assessed (e.g., K-2).</td>
<td>A public school or LEA is not required to make adequate yearly progress and is not included in the State Accountability System. State policy systematically excludes certain public schools and/or LEAs.</td>
</tr>
</tbody>
</table>

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(1.1)
Every Hawaii public school is required to make Adequate Yearly Progress (AYP) and is included in the State's single accountability system. Section 302A-1004(a)(6), *Hawaii Revised Statutes*, requires annual school "report cards"\(^1\) as well as a statewide summary report on school status and improvement. Both

---

Title I and non-Title I schools are part of the State's single accountability system.

The State has a definition of "public school" and "Local Education Agency" (LEA) for AYP accountability purposes. Section 302A-101, HRS, defines "public school" as " . . . all academic and noncollege type schools established and maintained by the department [Department of Education] and new century charter schools chartered by the board of education, in accordance with law." The governance and administrative structure of Hawaii’s public school system is unique among the states. The Hawaii public school system is a single, unified, statewide K-12 system of schools headed by the State Superintendent of Education and the State Board of Education. The Hawaii Department of Education (HIDOE) is both the State Education Agency (SEA) and the district or Local Education Agency (LEA). Subsequent notations of "LEA/SEA" in this Workbook will be a reference to the HIDOE’s dual role of serving as both the local/district and the state agencies in a single entity.

The state accountability system produces AYP decisions for all public schools, including public schools with variant grade configurations (e.g., K-8 and K-12 schools), public schools that serve special populations (e.g., juvenile correctional institutions such as Olomana School, and the Hawaii Center for the Deaf and Blind), and public charter schools.

Virtually all Hawaii public schools have at least one grade level (3, 4, 5, 6, 7, 8, or 10) assessed under the state assessment program. Those schools which do not have grade levels that are tested under the HIDOE’s system-wide assessment program are held accountable for their students' proficiency based on:

1. School-selected assessments of math and reading proficiency. If there are no school-selected assessments or if the school-selected assessments are deemed invalid or unreliable, or both, by the HIDOE for purposes of producing AYP decisions, in accordance with current standards for educational and psychological testing, then
2. The first tested grade in the next school that their students attend. If, due to their schools' configuration, these students will not subsequently attend another Hawaii public school, then
3. The last tested grade in the previous school that their students attended. If these students did not previously attend another Hawaii public school, then
4. State-selected assessments of math and reading proficiency, provided the state-selected

---

described in section 302A-1004(a)(6), Hawaii Revised Statutes, is not identical to the state report card described at 20 USC 6311(h)(1)(C) (see Appendix A).
assessments are deemed valid and reliable by the HIDOE for purposes of producing AYP decisions, in accordance with current standards for educational and psychological testing, provided that if future versions of the *Hawaii State Assessment* include test instruments for assessing the reading and mathematics proficiency of students enrolled in grade levels that are *not* currently tested under the HIDOE's system-wide assessment program (e.g., second grade), then the HIDOE will utilize the *Hawaii State Assessment* test instruments.

Most schools meet the minimum group size threshold of forty full academic year students for calculating a proficiency rate. On the 2005 *Hawaii State Assessment*, thirty-three schools had a total n-count in the grades assessed of less than forty students enrolled for a full academic year. When data were aggregated over three consecutive years (*i.e.*, 2003, 2004, and 2005) ten schools had a total n-count in the grades assessed of less than forty students enrolled for a full academic year. For schools with fewer than forty students enrolled for a full academic year, when pooled across all grades assessed, the HIDOE aggregates data for up to three consecutive years in order to meet the minimum group size requirement. If the minimum n-count requirement is not met in a given year even with multi-year aggregation of school-wide data, then the AYP determination is still made using the regular AYP model. In such cases, the reported AYP results include a statement indicating that the results may be unreliable due to the small number of students enrolled in the school available for analysis.

<tbody>
<tr>
<td>1.2 How are all public schools and LEAs held to the same criteria when making an AYP determination?</td>
<td>All public schools and LEAs are systematically judged on the basis of the same criteria when making an AYP determination. If applicable, the AYP definition is integrated into the State Accountability System.</td>
<td>Some public schools and LEAs are systematically judged on the basis of alternate criteria when making an AYP determination.</td>
</tr>
</tbody>
</table>

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(1.2) All public schools and the LEA/SEA are systematically judged on the basis of the same criteria when making AYP determinations. The HIDOE's definition of AYP establishes baselines or starting points using 2002 data for all schools. All schools are expected to attain annual progress resulting in proficiency among 100% of students in reading and mathematics by 2013-14. (Please see responses to Critical Elements 3.1, 3.2, 3.2a, 3.2b, and 3.2c below for details about the HIDOE's AYP criteria and the method of making AYP determinations.)

The AYP definition is integrated into the HIDOE's school accountability system.

<tbody>
<tr>
<td>1.3 Does the State have, at a minimum, a definition of basic, proficient and advanced student achievement levels in reading/language arts and mathematics?</td>
<td>State has defined three levels of student achievement: basic, proficient and advanced. Standards do not meet the legislated requirements.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(1.3)
The accountability system is based primarily on the *Hawaii Content and Performance Standards (HCPS) II State Assessment* results in reading and mathematics. The assessment is a custom-designed assessment program to measure student achievement of the *Hawaii Content and Performance Standards*. While the norm-referenced Stanford Achievement Tests, 9th Edition, Abbreviated (SAT-9), are a part of the state assessment program as required by State Board of Education Policy #2520, it is important to note that the assessment results used in the accountability system are the standards-based scores from the standards-based sections of the assessment, not SAT-9 (norm referenced) scores. The HIDOE has defined four levels of proficiency for the standards-based segments of the *HCPS II State Assessment* in reading and mathematics as follows:

2 System of State achievement standards will be reviewed by the Standards and Assessments Peer Review. The Accountability Peer Review will determine that achievement levels are used in determining AYP.
Level 3. Meets Proficiency

Assessment results indicate that the student has demonstrated the knowledge and skills required to meet the content standards for this grade. The student is ready to work on higher levels of this content area.

Level 4. Exceeds Proficiency

Assessment results indicate that the student has demonstrated knowledge and skills that exceed the content standards for this grade. The student is ready for more advanced work in the content area.

The student achievement levels of "Meets Proficiency" (proficient) and "Exceeds Proficiency" (advanced) determine how well students are mastering the State’s academic content standards; and the "Well Below Proficiency" and "Approaches Proficiency" (basic) levels of achievement provide information about the progress of lower-achieving students toward mastering the proficient and advanced levels. For purposes of calculating and reporting AYP, the Meets Proficiency and Exceeds Proficiency levels are considered "proficient" and the Approaches Proficiency and Well Below Proficiency levels are considered "not proficient." The "proficient" level (Meets Proficiency plus Exceeds Proficiency) is the goal for all public school students and it is the level used for making AYP decisions.

At its November 7, 2002 meeting, the State Board of Education established "cut-points" for the standards-based reading and mathematics scales for all grades tested (3, 5, 8, and 10). Applying these cut-points to preliminary 2002 assessment results showed the approximate distribution of students:

- Reading: 61% Not Proficient and 39% Proficient
- Mathematics: 81% Not Proficient and 19% Proficient

Academic achievement standards in grades 4, 6, and 7 for reading and mathematics were approved by the State Board of Education on September 15, 2005. The cut-scores associated with these tests were developed using a psychometric smoothing technique so they could be coherent with the cut-scores already established for grades of 3, 5, 8, and 10 in reading and mathematics. The cut-scores for grade 4 were established by averaging the percentage of students in each proficiency level at grades 3 and 5. The cut-scores for grades 6 and 7 were established by taking a weighted average of the percentage of students in each proficiency level at grades 5 and 8. This process allowed the impact data to be coherent across grades. This procedure was recommended by the HIDOE's Technical Advisory Committee in February 2005.
### CRITICAL ELEMENT

1.4 How does the State provide accountability and adequate yearly progress decisions and information in a timely manner?

### EXAMPLES FOR MEETING STATUTORY REQUIREMENTS

State provides decisions about adequate yearly progress in time for LEAs to implement the required provisions before the beginning of the next academic year.

State allows enough time to notify parents about public school choice or supplemental educational service options, time for parents to make an informed decision, and time to implement public school choice and supplemental educational services.

### EXAMPLES OF NOT MEETING REQUIREMENTS

Timeline does not provide sufficient time for LEAs to fulfill their responsibilities before the beginning of the next academic year.

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(1.4)

The *HCPS II State Assessment* for reading and mathematics is administered in the Spring (March/April in 2006) to permit assessment of an almost full year of student attainment at the tested grade level. Tests include essay, constructed response, and multiple-choice items. The test publisher scores the assessments off island. The timeline for reporting assessment results to schools, parents, and the public has been accelerated over past years by more than ninety days, from October or later to mid-July.

Beginning in 2006, the HIDOE will render preliminary AYP determinations; notify the State Board of Education, schools, and the newsmedia of those preliminary determinations; and announce (via the newsmedia) parents' school choice options, before the beginning of the new academic year in late July. The HIDOE will also require schools to inform the parents of all students who are assigned to a school that has been preliminarily identified for improvement, corrective action, or restructuring of their school choice option. Parent notification through the school will be in writing and take place no later than the first day of the school year.
Beginning with the 2006-2007 school year, all public schools, except multi-track, year-round schools and charter schools, will be on a single school calendar. The single school calendar adopted by the State Board of Education specifies the beginning and the end of the academic year (which is not synonymous with the term "full academic year" or FAY). Although the inherent nature of multi-track, year-round schools prevents the creation of a true single school calendar, it should be noted that the range of beginning dates for the 2006-2007 academic year will decrease from eight weeks to five weeks with the adoption of a single school calendar.

Final school and LEA/SEA accountability reports and AYP determinations are issued not more than forty days after schools receive their preliminary AYP results. The forty-day timeframe is necessary to accommodate the school-level appeals process described in Critical Element 9.2. Schools notify parents and make school choice available upon receipt of their preliminary accountability results, including AYP results (i.e., "met" or "not met") and NCLB status (e.g., corrective action and restructuring). Once final accountability results are issued, the HIDOE revises its list of schools identified for improvement, corrective action, or restructuring to reflect any additions or deletions resulting from the school-level appeals process. In cases where a school that was preliminarily identified for improvement, corrective action, or restructuring does not appear on the final list of schools identified for the same, the school will be so informed and relieved of prospective requirements. Any school choice commitments (i.e., transportation costs) that were made based on preliminary accountability results are honored for the remainder of the school year.

The HIDOE requires schools to offer public school choice to students enrolled in first year school improvement schools and to provide public school choice and supplemental educational services and take intervening actions appropriate to the number of years of school improvement or corrective action. The established timelines are consistent with NCLB.
### CRITICAL ELEMENT

<table>
<thead>
<tr>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does the State Accountability System produce an annual State Report Card?</td>
<td>The State Report Card includes all the required data elements [see Appendix A for the list of required data elements]. The State Report Card is available to the public at the beginning of the academic year. The State Report Card is accessible in languages of major populations in the State, to the extent possible. Assessment results and other academic indicators (including graduation rates) are reported by student subgroups.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(1.5)
The state accountability report card and school report cards for each Hawaii public school are produced and published electronically. The report cards include each of the data elements required by section 1111(h)(1)(C) of PL 107-110 except as noted below.

To be calculated accurately, the retention rate for elementary and middle school students (selected by the HIDOE as the third – or "other" – academic indicator required by NCLB) requires the enrolled grade level for each target student at the beginning of the subsequent academic year. Those data are obtained from the official enrollment count student rosters, which are created at the end of the second week of school. Any other data used for calculating retention rates would be subject to unacceptable rates of error. Likewise, the graduation rate (which is a true graduation rate, based on tracking individual students over four years) requires accurate identification of each student's status at the end of the senior academic year. Those data are only available after the close of the academic year and the receipt of students' final
grades. Consequently, the HIDOE’s retention and graduation rates are "lagging" rates. To be clear, schools’ retention rates and graduation rates are lagged one school year. The annual measurable objectives for retention rate and graduation rate are NOT lagged.

The HIDOE reports the percentage of classes in a school and in the LEA/SEA that are not taught by “highly qualified” teachers. To comply with NCLB regulations, a “highly qualified” teacher is defined as a person who:

1. Holds at least a bachelor’s degree; and
2. In each core academic subject taught:
   A. Has a Hawaii license for teaching; or
   B. Has successfully completed a state-approved teacher education program; or
   C. Has successfully completed an undergraduate major, a graduate degree, course work equivalent to an undergraduate major, or advanced certification or credential.

(Note: There is an exception in NCLB that recognizes teachers participating in an alternative route to licensure.)

“Highly qualified” for NCLB means that every class or period in a core subject area is taught by a teacher licensed in that core subject. Although fully licensed, a teacher may be required to teach a class in a core subject not covered in that licensure area. For NCLB purposes, that particular class is not taught by a “highly qualified” teacher.

The HIDOE also reports the percentages of teachers in a school and in the LEA/SEA who have the three types of professional credentials described below.

1. A fully licensed teacher has at least a bachelor’s degree; has completed an approved teacher training program; and has a teacher license issued by the Hawaii Teachers Standards Board.
2. A teacher with provisional credentials has at least a bachelor’s degree; has completed an approved teacher training program; and has completed requirements for a teacher license which is pending approval.
3. A teacher issued an emergency credential must be enrolled in a program leading to a full teacher license. An emergency credential is given when there is a position for which fully licensed or provisional credentialed teachers are not available.

Downloadable, print-ready versions of LEA/SEA and school report cards for the 2004-2005 school year
have been produced. The reports are accessible via the Assessment Resource Center Hawaii website at http://arch.k12.hi.us.
### Critical Element: How does the State Accountability System include rewards and sanctions for public schools and LEAs?

<table>
<thead>
<tr>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
</table>
| State uses one or more types of rewards and sanctions, where the criteria are:  
  • Set by the State;  
  • Based on adequate yearly progress decisions; and  
  • Applied uniformly across public schools and LEAs. | State does not implement rewards or sanctions for public schools and LEAs based on adequate yearly progress. |

#### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(1.6) The HIDOE uses one or more types of rewards and sanctions, where the criteria are applied uniformly across all public schools and the LEA/SEA.

Per the requirements of NCLB, sanctions and interventions are imposed by the LEA/SEA on all public schools through its single accountability system.

In Hawaii, both Title I and non-Title I schools are subject to the specific sanctions required by section 1116 of the NCLB law. Under NCLB, the State recognizes public schools as high performing that meet or exceed all State standards and achieve AYP for all applicable disaggregated groups of students. The State recognizes rapidly improving public schools that have made AYP for all applicable disaggregated groups of students for three consecutive years. Schools that fail to make Adequate Yearly Progress are subject to improvement and corrective action.

Academic achievement is recognized by two programs: the national No Child Left Behind Blue Ribbon Schools Program and Hawaii’s Distinguished Schools Program. All public elementary and secondary

---

3 The state must provide rewards and sanctions for all public schools and LEAs for making adequate yearly progress, except that the State is not required to hold schools and LEAs not receiving Title I funds to the requirements of section 1116 of NCLB [§200.12(b)(40)].
schools that meet the stringent criteria of the No Child Left Behind Blue Ribbon Schools Program are honored as schools that have made significant progress in closing the achievement gap or whose students achieve at very high levels. The Hawaii’s Distinguished Schools Program is a revision of a previous statewide public school recognition program.
### PRINCIPLE 2. All students are included in the State Accountability System.

<table>
<thead>
<tr>
<th>CRITICAL ELEMENT</th>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.1 How does the State Accountability System include all students in the State?</td>
<td>All students in the State are included in the State Accountability System. The definitions of &quot;public school&quot; and &quot;LEA&quot; account for all students enrolled in the public school district, regardless of program or type of public school.</td>
<td>Public school students exist in the State for whom the State Accountability System makes no provision.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(2.1) The definitions of "public school" and "LEA" account for all public school students enrolled in the LEA/SEA, regardless of program or type of public school. (See Critical Element 1.1, "How does the State Accountability System include every public school and LEA in the State?")

All students enrolled at the time of testing are expected to participate in the Hawaii State Assessment. A school’s "participation rate count date" is the Monday of the week when the school administers the first reading or math test session to the majority of its students. (If Monday is a state holiday, then the school’s participation rate count date is Tuesday.) A school’s participation rate count date operationally defines "enrolled at the time of testing" and comprises the denominator of the assessment participation rate measure used in determining AYP for the state, for the school, and for all required student subgroups. For purposes of systemwide accounting, the HIDOE uses March 1st or, if March 1st falls on a Saturday, Sunday, or state holiday, the first Monday in the month of March as a fixed census date. (See Critical Elements 2.2, 2.3, and 10.1 for related details.)

Make up sessions are given for students absent from school on scheduled testing dates. Alternate Assessment results are included in the school and LEA/SEA determination of AYP. Although students with disabilities and limited English proficient students may receive certain testing accommodations, no students are exempted from the assessment or accountability systems. (See Critical Element 5.3, "How
are students with disabilities included in the State’s definition of adequate yearly progress?” and Critical Element 5.4, "How are students with limited English proficiency included in the State’s definition of adequate yearly progress?")

The state assessment program's "Student Participation Information Handbook" (Department of Education, Planning & Evaluation Office, Test Development Section) provides all HIDOE personnel at the school, district, and state level with information regarding the *Hawaii Content and Performance Standards, Second Edition (HCPS II) State Assessment* participation criteria for various student populations. The guide is updated annually and distributed via memorandum from the State Superintendent to school and support staff. Adherence to the guide is required by administrative directive. Guidelines require that all students must participate in the state assessment program. Assessment administration guides and training activities, together with stringent testing administration procedures, assure compliance with these requirements.
<table>
<thead>
<tr>
<th>CRITICAL ELEMENT</th>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.2</td>
<td>The State has a definition of “full academic year” for determining which students are to be included in decisions about AYP. The definition of full academic year is consistent and applied statewide.</td>
<td>LEAs have varying definitions of “full academic year.” The State’s definition excludes students who must transfer from one district to another as they advance to the next grade. The definition of full academic year is not applied consistently.</td>
</tr>
</tbody>
</table>

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(2.2) The definition of full academic year is consistent and applied statewide. “Full academic year” is defined as continuous enrollment from the beginning date of one state assessment administration to the beginning date of the next annual administration (e.g., March 1, 2005 to March 1, 2006). A full academic year comprises no more than 365 days. A student attending the same school from the one test administration period to the next annual statewide test administration, i.e., for a full academic year, is included when determining if the school has made Adequate Yearly Progress (AYP) on the academic achievement proficiency measures. A student attending more than one public school in the State (LEA/SEA) during the full academic year is included when determining whether the LEA/SEA has made AYP on the academic achievement proficiency measures.
### CRITICAL ELEMENT

1. **How does the State Accountability System determine which students have attended the same public school and/or LEA for a full academic year?**

<table>
<thead>
<tr>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>State holds public schools accountable for students who were enrolled at the same public school for a full academic year. State holds LEAs accountable for students who transfer during the full academic year from one public school within the district to another public school within the district.</td>
<td>State definition requires students to attend the same public school for more than a full academic year to be included in public school accountability. State definition requires students to attend school in the same district for more than a full academic year to be included in district accountability. State holds public schools accountable for students who have not attended the same public school for a full academic year.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(2.3)
The State holds public schools accountable for students who were enrolled at the same public school for a full academic year. The student data elements used to determine which students have attended the same public school or LEA/SEA for a full academic year are collected in the statewide Student Information System. The statewide data system includes a unique student identifier that enables the HIDOE to account for individual student enrollment and mobility.

Students who transfer during the full academic year from one public school to another public school within the State are attributed to the LEA/SEA for the purposes of computing AYP and reporting.
PRINCIPLE 3. State definition of AYP is based on expectations for growth in student achievement that is continuous and substantial, such that all students are proficient in reading/language arts and mathematics no later than 2013-2014.

</tr>
</tbody>
</table>

STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(3.1)
The State’s timeline for AYP ensures that all students will meet or exceed the State’s proficient level of academic achievement (i.e., Meets Proficiency or Exceeds Proficiency) in reading and mathematics, no later than 2013-14.

Starting points, intermediate goals, and annual measurable objectives were set separately for reading and mathematics. Using 2002 state assessment data, baselines were established using the percent of students in the school ranked at the 20th percentile of enrollment. The 20th percentile method provided higher values (i.e., 30% for reading and 10% for mathematics) than the method based on the percent of students proficient in the lowest achieving subgroup (i.e., 6% proficient in reading among students with disabilities and 2% proficient in mathematics for students with disabilities). As required by NCLB, the higher values of the two methods were adopted as the AYP starting points or baseline values. The following tables provide the HIDOE’s starting points, intermediate goals, and annual measurable objectives. The HIDOE’s definition of Adequate Yearly Progress results in all students meeting or exceeding the proficient level of academic achievement in reading and mathematics no later than 2013-14.

If the state has separate assessments to cover its language arts standards (e.g., reading and writing), the State must create a method to include scores from all the relevant assessments.

To meet the expectations represented by these intermediate goals and annual measurable objectives, schools and districts must make substantial and continuous improvement.

The annual measurable objectives for the 2013-14 academic year require that 100% of students reach the proficient levels of performance in reading and mathematics.

<tr>
<td>3.2 How does the State Accountability System determine whether each student subgroup, public school and LEA makes AYP?</td>
<td>For a public school and LEA to make adequate yearly progress, each student subgroup must meet or exceed the State annual measurable objectives, each student subgroup must have at least a 95% participation rate in the statewide assessments, and the school must meet the State’s requirement for other academic indicators. However, if in any particular year the student subgroup does not meet those annual measurable objectives, the public school or LEA may be considered to have made AYP, if the percentage of students in that group who did not meet or exceed the proficient level of academic achievement on the State assessments for that year decreased by 10% of that percentage from the preceding public school year; that group made progress on one or more of the State’s academic indicators; and that group had at least 95% participation rate on the statewide assessment.</td>
<td>State uses different method for calculating how public schools and LEAs make AYP.</td>
</tr>
</tbody>
</table>

### State Response and State Activities for Meeting Requirements

(3.2)

In determining whether each subgroup, school, as well as the LEA/SEA overall, meet the annual measurable objectives, the HIDOE computes participation rates, calculates the percent of students who achieve the proficient level or higher, implements a uniform averaging procedure, and employs the safe harbor provision.
Participation requirements - Schools in which at least 95% of the students enrolled at the time of the test take the state assessments will meet the AYP standard for participation in the state assessment. Schools in which less than 95% of any student subgroup takes the state assessment will not meet the AYP standard for assessment participation, provided the size of the subgroup meets the minimum number required for making inferences about participation (40 students). (See Critical Element 5.5 for the rationales for the minimum number of students sufficient to yield statistically reliable information for each purpose for which data are used.) If the size of the subgroup is less than forty students, then a participation rate of less than 95% for that subgroup will not result in a failure to meet the AYP participation standard. Participation requirements will be applied in the same way when determining whether the LEA/SEA as a whole met the AYP standard for participation in the state assessment. Participation requirements are applied separately for reading and mathematics.

If a school or subgroup, or both, does not meet the 95% requirement, then the Department uses data from the previous year to average the participation rate data for the school or subgroup, or both, as needed. If this two-year average does not meet the 95% requirement, then the Department uses data from the previous two years to average the participation rate data for a school or subgroup, or both, as needed. If this three-year average does not meet the 95% requirement, then the school is not deemed to have met this requirement. (See Critical Element 10.1 for a description of the Secretary of Education's March 29, 2004, policy for calculating schools' participation rates.)

Uniform averaging procedure - Averaging pertains to both grade levels and years.

Grade levels
The HIDOE pools or combines (which is equivalent to averaging) the percent proficient across grades within a school building and the LEA/SEA to determine AYP. The percent proficient is calculated based on the number of tested students that were enrolled for a full academic year. AYP is determined separately for reading and mathematics.

Years
In addition, the HIDOE averages the most recent two years of test scores (including the current year’s scores) and compares the results to the current year’s test scores. The highest percent proficient is used to determine the school’s and the LEA’s/SEA’s AYP status. This approach
rewards schools for efforts that result in strong single-year achievement gains and minimizes the potential for falsely inferring that a school building or the LEA/SEA has failed to make AYP. Since the 2001-02 school year was the first time that the *HCPS II State Assessment* was administered, averaging across years was implemented following the 2002-03 administration of the state assessment.

- **Safe harbor provision** - If one or more subgroups within a school or the LEA/SEA, or if a school or the LEA/SEA as a whole, fail to meet the annual measurable proficiency objective, then the subgroup, school, or LEA/SEA still makes Adequate Yearly Progress if both of these conditions are met:

  (a) The percentage of students in the subgroup, school, or LEA/SEA who are *not proficient* decreases (improves) by at least 10% over one year (e.g., from Spring 2005 to Spring 2006), by at least 19% over two years (e.g., from Spring 2004 to Spring 2006), or by at least 27% over three years (e.g., from Spring 2003 to Spring 2006).

In calculating the percentage decrease, the HIDOE first computes the difference between the current year’s (e.g., Spring 2006) average percent not proficient and the preceding year’s (e.g., Spring 2005) average percent not proficient in order to determine whether the subgroup, school, or LEA/SEA achieved the criterion of a 10% reduction. If the subgroup, school, or LEA/SEA does not achieve a 10% reduction, then the HIDOE computes the difference between the average percent not proficient over two years (e.g., from Spring 2004 to Spring 2006) in order to determine whether the subgroup, school, or LEA/SEA achieved the criterion of a 19% reduction. If the subgroup, school, or LEA/SEA does not achieve a 19% reduction, then the HIDOE computes the difference between the average percent not proficient over three years (e.g., from Spring 2003 to Spring 2006) in order to determine whether the subgroup, school, or LEA/SEA achieved the criterion of a 27% reduction.

AND

(b) The students in that subgroup, school, or the LEA/SEA meet the annual measurable objective for the other academic indicator (i.e., retention rate for elementary and middle/intermediate schools or graduation rate for high schools).

AYP will be determined using 2002 data as the baseline. The starting points are calculated pursuant to
The NCLB law and rule requirements. The same starting point and annual, measurable goals apply to all student subpopulations resulting in 100% proficiency of all students by 2013-14.

The method used for determining whether each student subgroup, public school, and the LEA/SEA make AYP is summarized below. The method is applied separately to reading and to mathematics. Data are pooled across all grade levels in the school or LEA/SEA. The sequence of steps used in determining AYP is important.

1. Calculate the n-count for the subgroup (or aggregate group, i.e., school or LEA/SEA) and compare the value to the minimum n criterion of forty for making inferences about student proficiency. (See Critical Element 5.5.) If the n-count is smaller than the minimum n criterion for making inferences about student proficiency (forty), then the subgroup is not used in determining AYP. Otherwise, continue to Step 2.

Note: All subgroups at the school level, whether with an n-count too small to count toward AYP or not, are "rolled up" into the overall, aggregate school proficiency scores.

Note: For those few unique schools for which the total number of students enrolled in all the assessed grade levels is fewer than the minimum n-count, assessment data for the school is aggregated (as noted in Critical Element 1.1) over two consecutive years or more, if necessary, in order to meet the minimum n-size requirement. If the minimum n-count requirement is not met in a given year even with multi-year aggregation of school-wide data, then the AYP determination is still made using the regular AYP model. In such cases, the reported AYP results include a statement indicating that the results may be unreliable due to the small number of students enrolled in the school available for analysis.

2. Compute the percent of proficient students for the subgroup (or aggregate group, i.e., school or LEA/SEA) using the current year’s test scores and the average of the two most recent year’s scores (including the current year). If either or both computed percents proficient is equal to or greater than the established annual measurable objective, then AYP is met. Otherwise, AYP may not have been met, the final determination of which is subject to the "safe harbor provision" implemented in Step 3.

3. If the subgroup (or aggregate group, i.e., school or LEA/SEA) did not meet AYP under Step 2, then the specific requirements of the "safe harbor provision," as stipulated above, are invoked. If
both conditions of the safe harbor provision are satisfied, then AYP for proficiency of the subgroup is met. Otherwise, AYP is not met.

Note: In determining the percentage decrease in the percent of students not proficient, data used for the computation from the preceding year(s) may not satisfy the minimum n-count requirements for making inferences about subgroup proficiency. In that situation, the safe harbor computation is still made but associated AYP results include a statement indicating that the results may be unreliable due to the small number of students available for analysis.

4. Calculate the assessment participation rate for the subgroup (or aggregate group, i.e., school or LEA/SEA) in accordance to the "participation requirements" stipulated above. (See also Critical Element 10.1 for related details.) Compare the participation rate calculated to the minimum n criterion of forty for making inferences about student participation. (See Critical Element 5.5.) If the n-count is smaller than the minimum n criterion for making inferences about student participation (forty), then the subgroup is not used in determining AYP for participation rate. Otherwise, continue to Step 5.

5. Compare the calculated assessment participation rate to the 95% criterion. If the calculated assessment participation rate is equal to or greater than 95%, then AYP is met for the subgroup (or aggregate group, i.e., school or LEA/SEA). Otherwise, AYP is not met.

6. For the other required AYP indicators (i.e., graduation rate for high schools and retention rate for elementary and middle/intermediate schools), determine at the aggregate level of school or LEA/SEA, as appropriate, if the measurable annual target has been met. If the computed graduation or retention rate is equal to or greater than the specified annual target value, then the measurable annual target is met. If the annual measurable target is met, then AYP is met. Otherwise, AYP is not met.

Note: Disaggregation by subgroups is not necessary for purposes of determining AYP for the other required indicators. Only aggregate school-wide (and LEA/SEA level) values are needed. Disaggregated subgroup data for the other required indicators is necessary, however, for use in implementing the safe harbor provision in Step 3.

Failure to make AYP for two consecutive years - defined as failure of ANY subgroup (or aggregate group, i.e., school or LEA/SEA, if applicable) to not make AYP on the SAME indicator (i.e., reading,
mathematics, graduation or retention rate) - will result in the school (or LEA/SEA) being identified for improvement, corrective action, or restructuring as specified in NCLB.

For any school (or the LEA/SEA) to exit from improvement, corrective action, or planning for restructuring, it must meet AYP for two consecutive years.

</thead>
<tbody>
<tr>
<td>3.2a What is the State’s starting point for calculating Adequate Yearly Progress?</td>
</tr>
</tbody>
</table>

### Examples for Meeting Statutory Requirements

Using data from the 2001-2002 school year, the State established separate starting points in reading/language arts and mathematics for measuring the percentage of students meeting or exceeding the State’s proficient level of academic achievement.

Each starting point is based, at a minimum, on the higher of the following percentages of students at the proficient level: (1) the percentage in the State of proficient students in the lowest-achieving student subgroup; or, (2) the percentage of proficient students in a public school at the 20th percentile of the State’s total enrollment among all schools ranked by the percentage of students at the proficient level.

A State may use these procedures to establish separate starting points by grade span; however, the starting point must be the same for all like schools (e.g., one same starting point for all elementary schools, one same starting point for all middle schools).

### Examples of Not Meeting Requirements

The State Accountability System uses a different method for calculating the starting point (or baseline data).

---

### State Response and State Activities for Meeting Requirements

(3.2a)

NCLB requires that "data for the 2001-2002 school year" shall be used to define the starting point for the accountability system. Using data from the 2001-02 school year, the HIDOE established separate
starting points in reading and mathematics for measuring the percentage of students meeting or exceeding the State’s proficient level of academic achievement. The tables included in the response to Critical Element 3.1 show the starting point values established for each assessment.

The HIDOE calculated the State’s starting points for reading and math using NCLB-prescribed methodology. According to NCLB, the starting points for reading and for mathematics are to be based on the higher of the following percentages of students at the proficient level: (1) the percentage in the State of proficient students in the lowest-achieving student subgroup; or, (2) the percentage of proficient students in a public school at the 20th percentile of the State’s total enrollment among all schools ranked by the percentage of students at the proficient level.

The State used the required procedures to establish a common starting point for all grade levels assessed. The starting points for reading and for mathematics are the same for all schools and all student subgroups. The 20th percentile method provided higher values (i.e., 30% for reading and 10% for mathematics) than the method based on the percent of students proficient in the lowest achieving subgroup (i.e., 6% proficient in reading among students with disabilities and 2% proficient in mathematics for students with disabilities). As required by NCLB, the higher values of the two methods were adopted as the AYP starting points or baseline values: 30% for reading, 10% for mathematics. A report of the methodology and results for setting the starting points was accepted by the State Board of Education at their March 6, 2003 meeting and is published on the web at http://arch.k12.hi.us.

<tbody>
<tr>
<td>3.2b What are the State’s annual measurable objectives for determining adequate yearly progress?</td>
<td>State has annual measurable objectives that are consistent with a state’s intermediate goals and that identify for each year a minimum percentage of students who must meet or exceed the proficient level of academic achievement on the State’s academic assessments. The State’s annual measurable objectives ensure that all students meet or exceed the State’s proficient level of academic achievement within the timeline. The State’s annual measurable objectives are the same throughout the State for each public school, each LEA, and each subgroup of students.</td>
<td>The State Accountability System uses another method for calculating annual measurable objectives. The State Accountability System does not include annual measurable objectives.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(3.2b) The values for the HIDOE’s annual measurable objectives are given above in the response to Critical Element 3.1. The HIDOE established annual measurable objectives that are consistent with its intermediate goals and that identify for each year a minimum percentage of students who must meet or exceed the proficient level of academic achievement on the State’s academic assessments. The HIDOE established separate reading and mathematics statewide annual measurable objectives, uniform for all grades assessed, among which assessment data were pooled or combined, that identify a minimum percentage of students that must meet the proficient level of academic achievement. Between intermediate goals, annual measurable objectives utilize the same percent proficient as the most recent intermediate goal.
The reading and mathematics annual measurable objectives are applied to each school, as well as to each subgroup at the school and LEA/SEA levels, to determine AYP status. When determining the results statewide and for schools with multiple levels, as well as for subgroups within them, each annual measurable objective is applied to all grades assessed separately for reading and mathematics.

The State’s annual measurable objectives ensure that all students meet or exceed the State’s proficient level of academic achievement within the timeline.

The State’s annual measurable objectives are the same throughout the State for each public school, each subgroup of students, and for the LEA/SEA.

A report of the methodology and results for setting the annual measurable objectives was accepted by the State Board of Education at their March 6, 2003 meeting and is published on the web at http://arch.k12 hi.us.

<td>AYP decisions for public schools and LEAs are not made annually.</td>
</tr>
</tbody>
</table>

STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(4.1)
AYP decisions for each public school and the LEA/SEA are made annually. Failure to make AYP for two consecutive years - defined as failure of ANY subgroup (or aggregate group, i.e., school or LEA/SEA, if applicable) to not make AYP on the SAME indicator (i.e., reading, mathematics, graduation or retention rate) – results in the school (or LEA/SEA) being identified for improvement, corrective action, or restructuring as specified in NCLB. This approach is consistent with No Child Left Behind’s goal of successfully remediating subject performance deficiencies and mitigates the potential for falsely inferring that a school or LEA/SEA is not meeting AYP standards. Please see the responses to Critical Elements 3.1 and 3.2 for a description of the procedures on how AYP decisions are determined annually for each required subgroup, public school, and for the LEA/SEA.

The following school-level examples illustrate key features of the implementation of NCLB-required sanctions within context of not making AYP in the same content area or subject for two consecutive years. Note that, in terms of meeting annual measurable objectives, there is only one difference between Scenario #1 and #2 and, that is, in Scenario #1 the reading targets are met in Year 5 while in Scenario #2 the reading targets are not met in Year 5. The accountability consequence of that difference in terms of

5 Decisions may be based upon several years of data and data may be averaged across grades within a public school (§1111(b)(2)(J)).
schoolwide NCLB sanction status in Year 5 is considerable.

** SI1: School Improvement Year 1; SI2: School Improvement Year 2; CA: Corrective Action

*** Based on Year 5 results, the school will enter CA due to reading. This occurs because the "trigger" for increasingly severe sanctions (due in this case to reading) remains in effect until removed by attaining the targets for two consecutive years.
PRINCIPLE 5. All public schools and LEAs are held accountable for the achievement of individual subgroups.

<table>
<thead>
<tr>
<th>CRITICAL ELEMENT</th>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.1 How does the definition of adequate yearly progress include all the required student subgroups?</td>
<td>Identifies subgroups for defining adequate yearly progress: economically disadvantaged, major racial and ethnic groups, students with disabilities, and students with limited English proficiency. Provides definition and data source of subgroups for adequate yearly progress.</td>
<td>State does not disaggregate data by each required student subgroup.</td>
</tr>
</tbody>
</table>

STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(5.1)
Subgroups used in determining Adequate Yearly Progress include:

- Economically disadvantaged
- Major racial and ethnic groups - American Indian/Alaskan Native, Asian/Pacific Islander, Black, White, Hispanic
- Students with disabilities, and
- Students with limited English proficiency.

The inclusion of all required student subgroups in the determination of Adequate Yearly Progress will be ensured by the State use of the same complete student roster file for determination of relevant group membership that is used by the State to determine students’ eligibility for participation in the statewide assessment. This roster identifies each student's race or ethnicity, status as economically disadvantaged or not, special education status, English proficiency status, gender, and status as a migrant student or not.
Race or ethnicity and gender are recorded in the student roster by schools at the time of students’ initial enrollment (via Form SIS-10). Economic disadvantage is identified annually through determination of eligibility for free or reduced cost school lunch. Students from families receiving public assistance are identified directly by the State Department of Human Services. Special education status is drawn from the HIDOE’s special education database system. Limited English proficiency is denoted in the records when a child is referred for English for Second Language Learner program services. And status as a migrant student is obtained annually from the HIDOE’s office for migrant student services.

</thead>
<tbody>
<tr>
<td>5.2 How are public schools and LEAs held accountable for the progress of student subgroups in the determination of adequate yearly progress?</td>
<td>Public schools and LEAs are held accountable for student subgroup achievement: economically disadvantaged, major ethnic and racial groups, students with disabilities, and limited English proficient students.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(5.2)
All public schools and the LEA/SEA are held accountable for student subgroup achievement - economically disadvantaged, major ethnic and racial groups, students with disabilities, and limited English proficient students - through the AYP determination, provided the subgroup meets the minimum group size requirement. From its Student Information System and state assessment databases the HIDOE is able to match student demographic data with test results and tabulate results for all required subgroups. For each subgroup and school, AYP determinations will be issued using the same reporting rules used to determine AYP for students in the aggregate at the LEA/SEA level. For each school and the LEA/SEA, the State will determine for each group of sufficient size whether the group achieved the annual measurable objective or satisfied the safe harbor provision of NCLB and met the 95% participation rate criteria.
How are students with disabilities included in the State’s definition of adequate yearly progress?

**Examples for Meeting Statutory Requirements**
- All students with disabilities participate in statewide assessments: general assessments with or without accommodations or an alternate assessment based on grade level standards for the grade in which students are enrolled.
- State demonstrates that students with disabilities are fully included in the State Accountability System.

**Examples of Not Meeting Requirements**
- The State Accountability System or State policy excludes students with disabilities from participating in the statewide assessments.
- State cannot demonstrate that alternate assessments measure grade-level standards for the grade in which students are enrolled.

**State Response and State Activities for Meeting Requirements**

(5.3)

All students with disabilities participate in statewide assessments: general assessments with or without accommodations or alternate assessments based on alternate achievement standards for the grade in which the students are enrolled.

All special education students currently enrolled in grades 3, 4, 5, 6, 7, 8, and 10 must take the Hawaii State Assessment or the Hawaii State Alternate Assessment. If required by the student’s Individualized Education Program (IEP), special education students may take the Hawaii State Assessment with accommodations. Twenty-three different accommodations are provided (for the Spring 2006 administrations), e.g., accommodations in presentation format, response format, setting, use of assistive technology, and timing.

The Hawaii State Alternate Assessment is a standards-based assessment that is administered to students who have IEPs and who, because of significant cognitive disabilities, are unable to participate in the Hawaii State Assessment even with necessary accommodations. The Hawaii State Alternate Assessment consists of a comprehensive rating scale. In addition to rating all items on the assessment, it requires the collection of two independent pieces of evidence using two types of assessment, e.g., observation, interview, record review, performance assessment, and student work sample for three
reading standards and five mathematics strands. The Hawaii State Alternate Assessment was designed to rate students’ proficiency on the same Language Arts and Mathematics Content Standards that are assessed by the Hawaii State Assessment. The Grade-level Benchmarks for Language Arts and Mathematics have been expanded for the Hawaii State Alternate Assessment to include performances and behaviors for students with significant cognitive disabilities, some of whom may require "prerequisite" or "enabling" skills that are part of a continuum of skills to attain the identified content standards at each grade level. For reporting and accountability purposes, students taking the Hawaii State Alternate Assessment are included in school summary reports and in determinations of AYP. All Hawaii State Alternate Assessment scores will be assigned to the "Well Below Proficiency" performance level until alternate achievement standards are adopted by the Board of Education. Upon the adoption of these alternate achievement standards, all Hawaii State Alternate Assessment scores will be assigned to one of four proficiency levels: "well below proficiency", "approaches proficiency", "meets proficiency", and "exceeds proficiency". 

Beginning in 2006, the Department will include the "meets" and "exceeds" proficiency scores of students with significant cognitive disabilities (based on alternate academic achievement standards approved by the Board of Education) when calculating adequate yearly progress for schools and the SEA/LEA, provided:

1. The Board of Education approves the alternate academic achievement standards before the HIDOE renders any preliminary AYP determinations based on the same; and
2. The number of students who score at the "meets" or "exceeds" level on the alternate achievement standards at the SEA/LEA level does not exceed 1.0% of all students in the grades assessed in reading and in mathematics. If the number of students who score at the "meets" or "exceeds" level on the alternate achievement standards at the SEA/LEA level exceeds 1.0%, then the Department will include the "meets" and "exceeds" proficiency scores of students with significant cognitive disabilities in the following order up to the 1.0% cap.

<table>
<thead>
<tr>
<th>Priority for being included under the 1% cap</th>

Sixth, all students who are:  

|        | Yes | No | No | Yes | must be ≤ 1.0% cap |

If only a portion (rather than all) of the "meets" and "exceeds" proficiency scores of students with second priority will be included, then only the "meets" and "exceeds" proficiency scores of students with first priority will be included. If only a portion (rather than all) of the "meets" and "exceeds" proficiency scores of students with third priority can be included, then only the "meets" and "exceeds" proficiency scores of students with second priority will be included. If only a portion (rather than all) of the "meets" and "exceeds" proficiency scores of students with fourth priority can be included, then only the "meets" and "exceeds" proficiency scores of students with third priority will be included. If only a portion (rather than all) of the "meets" and "exceeds" proficiency scores of students with fifth priority can be included, then only the "meets" and "exceeds" proficiency scores of students with fourth priority will be included. If only a portion (rather than all) of the "meets" and "exceeds" proficiency scores of students with sixth priority can be included, then only the "meets" and "exceeds" proficiency scores of students with fifth priority will be included.

In 2005, a total of 260 students in grades 3, 5, 8, and 10 were scheduled to participate in the state math assessment via the Alternate Assessment. That number represents 0.47% (260/55865) of all public school students in grades 3, 5, 8, and 10 who were scheduled to participate in the 2005 math assessment. In 2005, a total of 260 students in grades 3, 5, 8, and 10 were scheduled to participate in the state reading assessment via the Alternate Assessment. That number represents 0.47% (260/55857) of all public school students in grades 3, 5, 8, and 10 who were scheduled to participate in the 2005 reading assessment.

In accordance with the USDOE's (Tuesday, May 10, 2005) interim flexibility for determining the NCLB sanction status of LEAs and schools that did not make AYP based solely on the proficiency rate of the students with disabilities (i.e., SPED) subgroup, and for purposes of the 2005-2006 school year only, the Department will increase the proficiency rate of that subgroup by a mathematical constant equal to 0.02 divided by the proportion of students with disabilities in grades 3, 4, 5, 6, 7, 8, and 10 at the time of testing. If the SEA/LEA's or a school's adjusted proficiency rate in reading or math, or both, is equal to or greater than the annual measurable objectives for the same, then the students with disabilities subgroup will be deemed to have made AYP in reading or math, or both. For purposes of this interim flexibility, the Department will display the unadjusted proficiency rate of the SPED subgroup in mathematics and reading, and will note that a school or the SEA/LEA made AYP in mathematics or reading, or both,
because the proficiency rate of the SPED subgroup was increased by the constant described in this paragraph.

The proportion of students with disabilities will be determined by dividing the number of active SPED students in grades 3, 4, 5, 6, 7, 8, and 10 at the time of testing, by the number of active students in grades 3, 4, 5, 6, 7, 8, and 10 at the time of testing (see below).

\[
\text{Proportion of students with disabilities} = \frac{\text{number of active SPED students in grades 3-8 and 10 at the time of testing}}{\text{number of active students in grades 3-8 and 10 at the time of testing}}
\]

The term "at the time of testing" refers to a school’s participation rate count date (test start date), which is based on the week when the school administers the first reading or math test session to the majority of its students.

Students with disabilities are students with an IDEA eligibility flag ("SPED") in the HIDOE's statewide Student Information System at the time of the state assessment administration in the Spring.

See also Critical Element 1.1, "State Accountability System includes every public school and LEA in the State" and Critical Element 2.1, "How does the State Accountability System include all students in the State?"

## CRITICAL ELEMENT

5.4 How are students with limited English proficiency included in the State’s definition of adequate yearly progress?

### EXAMPLES FOR MEETING STATUTORY REQUIREMENTS

- All LEP students participate in statewide assessments: general assessments with or without accommodations or a native language version of the general assessment based on grade level standards.
- State demonstrates that LEP students are fully included in the State Accountability System.

### EXAMPLES OF NOT MEETING REQUIREMENTS

- LEP students are not fully included in the State Accountability System.

## STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(5.4)

All English for Second Language Learner (ESLL or "LEP") students are required to participate in the state assessment. They are allowed to take one or more of the test segments with appropriate accommodations (e.g., extended time) that are based on the student’s identified learning needs, if used during the student’s classroom instruction, recommended by the student’s ESLL teacher and regular classroom teacher, and among those accommodations currently approved by the HIDOE.

The HIDOE categorizes ESLL students in three language proficiency levels: Non-English Proficient (NEP), Limited English Proficient (LEP) and Fluent English Proficient (FEP). The levels concur with proficiency levels on sanctioned language proficiency assessments.

For the Spring 2002 and 2003 administrations of the HCPS II State Assessment, assessment participation requirements for NEP students were, in summary, as follows:

- All NEP students were required to participate in the statewide assessment in mathematics. NEP students could be excused from the reading assessment. Upon attaining a LEP level of English proficiency, ESLL students were required to take both the reading and mathematics state assessments (with accommodations, if appropriate).
NEP students who did not take the HCPS II State Assessment's reading test were counted as non-participants in the denominator of the participation rate for the state reading assessment.

Upon the recommendation of the U.S. Department of Education’s Peer Review of March 21, 2003, given its review of the HIDOE's draft Consolidated State Application Accountability Workbook dated January 31, 2003, the HIDOE, effective with the 2004 statewide assessment administration, required all ESLL students, at each and every language proficiency level, to take the Hawaii State Assessment in both reading and mathematics. The HIDOE affirms the principle that all students in the Hawaii public school system should participate in the statewide assessment program.

ESLL students are students with a "SLEP" flag (Students of Limited English Proficiency or SLEP is the term the HIDOE formerly used to designate ESLL students and the term is still used in student records) in the statewide Student Information System at the time of the state assessment administration in the Spring. Only "SLEP" with a type "J" code, meaning "active SLEP," i.e., eligible and receiving ESLL instructional services, are included in the definition of ESLL (SLEP, type "J") as used to define the "limited English proficient" subgroup for NCLB state assessment and AYP requirements. Except as provided below, former or "mainstreamed" ESLL students are not included in the "limited English proficient" subgroup for NCLB purposes, but rather are included in the general student population.

Former ESLL Students

**Pooling the proficiency ratings of former and current ESLL students.** In accordance with the USDOE's (Thursday, February 19, 2004) policy concerning the measurement of adequate yearly progress by students in the ESLL subgroup, the HIDOE pools the reading/language arts and math proficiency ratings of former ESLL students with the proficiency ratings of current ESLL students, for up to two school years.

**Calculating the proficiency and participation rates of ESLL students.** If the number of students in a school's ESLL subgroup, excluding ESLL students who (having met all minimum Exit Criteria) were exited from the ESLL program between the day after the close of the preceding test administration window (e.g., Saturday, May 1, 2004) and the close of the subsequent test administration window (e.g., Friday, April 29, 2005) is less than forty, then the ESLL subgroup's proficiency rate is not calculated. If the number of students in a school's ESLL subgroup, excluding ESLL students who (having met all minimum Exit Criteria) were exited from the ESLL program between the day after the close of the preceding test administration window and the close of the subsequent test administration window is
greater than or equal to forty, then the calculation of the ESLL subgroup's proficiency rate includes these former ESLL students.

If the number of students in a school's ESLL subgroup, excluding ESLL students who (having met all minimum Exit Criteria) were exited from the ESLL program between the day after the close of the preceding test administration window (e.g., Saturday, May 1, 2004) and the close of the subsequent test administration window (e.g., Friday, April 29, 2005) is less than forty, then the ESLL subgroup’s participation rate is not calculated. If the number of students in a school's ESLL subgroup, excluding ESLL students who (having met all minimum Exit Criteria) were exited from the ESLL program between the day after the close of the preceding test administration window and the close of the subsequent test administration window is greater than or equal to forty, then the calculation of the ESLL subgroup’s participation rate will include these former ESLL students.

See also Critical Element 1.1, "State Accountability System includes every public school and LEA in the State" and Critical Element 2.1, "How does the State Accountability System include all students in the State?"

<table>
<thead>
<tr>
<th>CRITICAL ELEMENT</th>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.5 What is the State's definition of the minimum number of students in a subgroup required for reporting purposes? For accountability purposes?</td>
<td>State defines the number of students required in a subgroup for reporting and accountability purposes, and applies this definition consistently across the State.(^6) Definition of subgroup will result in data that are statistically reliable.</td>
<td>State does not define the required number of students in a subgroup for reporting and accountability purposes. Definition is not applied consistently across the State. Definition does not result in data that are statistically reliable.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(5.5) The minimum number of students (n-count) required in a subgroup for reporting is ten to protect student privacy. For accountability purposes (i.e., determining AYP), the minimum number of students is forty for making inferences about student proficiency and forty for making inferences about the assessment participation rate. These minimum n-count criteria are applied consistently across the State for reporting and accountability purposes. The identification of ten students per subgroup for reporting is based on the need to protect the privacy of students when reporting results. Please see the response to Critical Element 5.6 for additional details regarding the criteria of a minimum n of ten to protect student privacy.

The HIDOE has determined that the minimum number of students in a group required for statistical reliability is forty. This minimum applies to any calculation of a proportion, mean, or statistic that carries with it the implication of a group outcome characteristic (e.g., the percentage of a group demonstrating reading proficiency). This value maximizes statistical reliability in AYP determinations while holding schools accountable for the maximum number of students.

The HIDOE is well aware of the complex, interacting issues impacting the accuracy and consistency of AYP determinations. The major issues are sampling error (i.e., accuracy or alpha-level of a test of

---

\(^6\) The minimum number is not required to be the same for reporting and accountability.
statistical significance, power, precision, and n-count), measurement error (psychometric quality of the assessment scores), the rigorous demands of the NCLB accountability design itself (e.g., its fully conjunctive use of thirty-seven indicators, the lack of independence between the required subgroups, the use of growth scores as embedded within the safe harbor provision), and basic data processing and reporting quality controls. While the element of n-count affects the reliability and validity of data and decisions, it is only one factor. See also Critical Element 9.1, "How do AYP determinations meet the State’s standard for acceptable reliability?"

For the purpose of determining assessment participation rates as an indicator of AYP, the HIDOE uses a minimum n-count of forty students for subgroups. The stringent 95% NCLB-required criterion implies that if subgroup sizes less than forty are used, no more than one student could miss the test. Even schools that are zealous about maximizing student participation in the state assessment encounter circumstances that prevent students from taking the test (e.g., extended illness, injury, family issues). Consequently, the HIDOE will use a minimum n-count of forty prior to applying the 95% participation rate standard for subgroups.

</thead>
</table>

### EXAMPLES FOR MEETING STATUTORY REQUIREMENTS

- Definition does not reveal personally identifiable information.\(^7\)

### EXAMPLES OF NOT MEETING REQUIREMENTS

- Definition reveals personally identifiable information.

---

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(5.6)

The HIDOE has determined the minimum number of students in a cell required for protection of students' privacy as ten. A cell is the unit or subunit for which a count is reported, such as "economically disadvantaged students scoring below proficiency." This minimum applies to any count of information for which privacy is at issue, such as reading proficiency status, by student characteristics, such as ethnicity or special education status. Cells for which the privacy minimum is not met are blanked in reports of disaggregated data. The determination was made in an administrative directive from the State Superintendent of Education on guidelines for disaggregation of student data promulgated in 2000.

Additionally, the HIDOE applies a rule ("single-populated level rule") such that no reporting of a subgroup is made publicly if all students within the subgroup perform (or respond, in the case of questionnaire data) to a single value or level on a dependent outcome variable. For example, if all students in a given school, say, from the students with disabilities subgroup, scored in the non-proficient range in reading on the state assessment, then reporting subgroup results for that "single-populated level" would reveal personally identifiable information about each student with membership in that subgroup. Such practice is not allowed.

For the situation where the n-count is at least ten and all values for a subgroup occur in a single level, the

---

\(^7\) The Family Education Rights and Privacy Act (FERPA) prohibits an LEA that receives Federal funds from releasing, without the prior written consent of a student's parents, any personally identifiable information contained in a student's education record.
technique of limitation of detail by using ranges will be used, for example, reporting "greater than 80% proficient" for the subgroup. This method allows for the maximum amount of information to be reported while still protecting the privacy of individuals.

PRINCIPLE 6. State definition of AYP is based primarily on the State’s academic assessments.

</tr>
</tbody>
</table>

STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(6.1)
The State’s AYP decisions are based primarily on the *Hawaii Content and Performance Standards (HCPS) II State Assessment* in reading and math currently administered in grades 3, 4, 5, 6, 7, 8, and 10. Assessment data are pooled (combined) across grade levels within a school. Of the thirty-seven criteria used to determine AYP, all but one - the additional academic indicator (i.e., graduation rate for high schools, retention rate for elementary and intermediate or middle schools) - are based on the state assessment.

There are a total of eighteen measures for reading:
- Nine measures corresponding to the percent of students proficient (all students and eight required subgroups: economically disadvantaged; five major ethnic and racial groups; students with disabilities; limited English proficient students) and
- Nine additional measures for the percent of students participating in the reading assessment, with a minimum of 95% required, for all students and each of the eight required subgroups.

Similarly, a total of eighteen measures for mathematics is used in determining AYP.

---

\(^8\) State Assessment System will be reviewed by the Standards and Assessments Peer Review Team.
PRINCIPLE 7. State definition of AYP includes graduation rates for public High schools and an additional indicator selected by the State for public Middle and public Elementary schools (such as attendance rates).

<table>
<thead>
<tr>
<th>CRITICAL ELEMENT</th>
<th>EXAMPLES FOR MEETING STATUTORY REQUIREMENTS</th>
<th>EXAMPLES OF NOT MEETING REQUIREMENTS</th>
</tr>
</thead>
</table>
| 7.1 What is the State definition for the public high school graduation rate? | State definition of graduation rate:  
  • Calculates the percentage of students, measured from the beginning of the school year, who graduate from public high school with a regular diploma (not including a GED or any other diploma not fully aligned with the state’s academic standards) in the standard number of years; or  
  • Uses another more accurate definition that has been approved by the Secretary; and  
  • Must avoid counting a dropout as a transfer.  
  Graduation rate is included (in the aggregate) for AYP, and disaggregated (as necessary) for use when applying the exception clause\(^9\) to make AYP. | State definition of public high school graduation rate does not meet these criteria. |

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(7.1)  
Graduation Rate is defined as follows:

---

\(^9\) See USC 6311(b)(2)(I)(i), and 34 C.F.R. 200.20(b)
A. For the LEA/SEA -
   The percentage of first-time ninth grade students who graduate with a diploma within four years, excluding students who have transferred out of the Hawaii public school system.

B. For schools -
   The percentage of first-time ninth grade students who graduate with a diploma within four years, excluding students who have transferred out of the school.

   The denominator of the graduation rate is the number of first-time ninth grade students from the State's beginning-of-the-school-year official enrollment count, excluding students transferring out.*

   The numerator of the graduation rate is the number of students receiving a diploma** within four school years.

   *The term "transfer" excludes "dropouts" as defined in the calculation of dropout rates under the Common Core of Data survey conducted by the National Center for Education Statistics (NCES).

   **The term "diploma" is defined as completion of the State Board of Education approved educational program and receipt of a Board of Education or Department of Education diploma in recognition thereof. The term does not include a GED or any other degree that is not fully aligned with the Hawaii Content and Performance Standards. Special education students who are not working toward a diploma may receive a certificate if they complete the program specified in their IEP. Students who receive these IEP completion certificates are not counted as graduates.

For purposes of AYP (other than the safe harbor provision), the calculation of the graduation rate applies to the school and LEA/SEA levels, but not to the subgroup level. Schools and the LEA/SEA that meet or exceed the annual measurable objective (threshold) for the graduation rate are deemed to have met the other academic indicator for purposes of calculating AYP.

In addition to being part of the definition of AYP, schools and the LEA/SEA are required to meet the graduation rate threshold as a requirement for the safe harbor provision. Graduation rate is included (in the aggregate) for determining AYP, and disaggregated as necessary for use when applying the safe
harbor provision.

A report of the rationale and proposed values for a long-term goal and annual measurable objectives for graduation rate was accepted by the State Board of Education at their March 6, 2003 meeting and is published on the web at http://arch.k12.hi.us. Those values are given in the following table.

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(7.2)

*Retention Rate* is defined as follows:

A. Elementary Schools:

   The percentage of students for the target school year in grades 1 through 5 (or 6) whose grade level is the same or lower in the subsequent school year.

B. Middle, Intermediate, or multi-level Elementary/Intermediate Schools:

   The percentage of students for the target school year in the school’s highest grade whose grade level is the same or lower in the subsequent school year; provided that if the highest grade for the target school year is greater than 8, then the retention rate is based on the percentage of the school’s 8th grade students whose grade level is 8 or lower in the subsequent school year.

For purposes of AYP (other than the safe harbor provision), the calculation of the retention rate applies to

---

10 NCLB only lists these indicators as examples.
the school and LEA/SEA levels, but not to the subgroup level. Schools that achieve or exceed the annual measurable objective (threshold) for the retention rate are deemed to have met the other academic indicator for purposes of calculating AYP. The same conditions apply to the LEA/SEA.

In addition to being part of the definition of AYP, schools and the LEA/SEA are required to meet the retention rate threshold as a requirement for the safe harbor provision. Retention rate is included (taken together) for determining AYP, and disaggregated as necessary for use when applying the safe harbor provision.

A report of the rationale and proposed values for a long-term goal and annual measurable objectives for retention rate was accepted by the State Board of Education at their March 6, 2003 meeting and is published on the web at http://arch.k12.hi.us. Those values are given in the following tables.

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(7.3)
Reliability and validity are terms properly used in reference to *indirect* measures, which require inference to connect the measure to an important construct (e.g., test score to reading comprehension), and which involve measurement error, such as students' scores on a test of thirty items sampled from a universe of 10,000 potential questions. Both the graduation rate (used for high schools, and multi-level high/intermediate schools and high/elementary schools) and the retention rate (used for elementary, middle, and intermediate schools) are calculated from counts of all relevant students by status and are *ipso facto* valid. They are direct calculations of the target rates and require no inference to underlying constructs. The status of students as members of the relevant base group (the denominator of the rate), as graduates, or as having been retained in grade is determined by clear, fixed criteria applied to all students and determined at a fixed date, and is not subject to measurement error. Since the rate is calculated from the universe of relevant students as of fixed dates, the rate for a given school in a given year does not vary with repeated calculation. There is question as to whether these rates are stable from year to year. That is not a question of reliability, however, but rather of the variability of performance between different cohorts of students. The graduation rate or retention rate in one year is not an estimate of an underlying rate for cohorts in all years. If it were, then, and only then, would reliability be at issue.

Our Student Information System captures student data on an individual basis statewide. A unique
student identifier provides for accurate association of data to individual students.

The State produces academic assessments consistent with the Standards for Educational and Psychological Testing (AERA, NCME, APA, 1999). The State’s contractor for the custom-developed standards-based segments of the *HCPS II State Assessment* is responsible for researching, documenting and attesting to the reliability and validity of state assessment instruments.
PRINCIPLE 8. AYP is based on reading/language arts and mathematics achievement objectives.

STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(8.1)

The Adequate Yearly Progress (AYP) calculation examines separately the proportion of students proficient in reading and mathematics, as well as the rates of participation in the reading and mathematics assessments. In determining whether each subgroup, school, and the LEA/SEA as a whole meets the annual measurable objectives, the HIDOE calculates - separately for reading and for mathematics - the percent of the tested students who achieve the proficient level, examines assessment participation rates, implements a uniform averaging procedure by pooling data across grade levels, and employs the safe harbor provision when applicable.

The HIDOE has established separate, statewide, annual measurable objectives in reading and mathematics that identify a minimum percentage of students who must meet the proficient level of academic achievement. The reading and mathematics annual measurable objectives are applied to each school, to the LEA/SEA, as well as to each subgroup at the school and LEA/SEA levels, to determine AYP status.

\(^{11}\) If the state has more than one assessment to cover its language arts standards, the State must create a method for including scores from all the relevant assessments.
Consecutive years of failing AYP requirements are predicated on ANY subgroup of students failing the SAME subject (reading or mathematics) for multiple years. For related details, please see responses to Critical Element 3.2, "How does the State Accountability System determine whether each student subgroup, public school and LEA makes AYP?" and Critical Element 4.1, "How does the State Accountability System make an annual determination of whether each public school and LEA in the State made AYP?"
## PRINCIPLE 9. State Accountability System is statistically valid and reliable.

<tr>
<td>9.1 How do AYP determinations meet the State’s standard for acceptable reliability?</td>
<td>State has defined a method for determining an acceptable level of reliability (decision consistency) for AYP decisions. State provides evidence that decision consistency is (1) within the range deemed acceptable to the State, and (2) meets professional standards and practice. State publicly reports the estimate of decision consistency, and incorporates it appropriately into accountability decisions. State updates analysis and reporting of decision consistency at appropriate intervals.</td>
<td>State does not have an acceptable method for determining reliability (decision consistency) of accountability decisions, e.g., it reports only reliability coefficients for its assessments. State has parameters for acceptable reliability; however, the actual reliability (decision consistency) falls outside those parameters. State’s evidence regarding accountability reliability (decision consistency) is not updated.</td>
</tr>
</tbody>
</table>

### STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(9.1) There is a probability of error associated with each subgroup decision (e.g., that a subgroup met or exceeded the target performance specified by an annual measurable objective or not) and that the probability of misidentification error in a conjunctively determined school-wide decision (e.g., that the school made AYP or not) increases as the number of subgroups for which the school is accountable increases. In addition, there is a tradeoff between increasing the reliability of decisions and including the maximum number of subgroups in the accountability system. Since only those students in the particular grade levels included in the state assessment program contribute academic achievement data, those students constitute a sample when making inferences about subgroups in the school (or the LEA/SEA) as well as when making inferences about the school as a whole (or the entire LEA/SEA). While increasing the minimum sample size or n-count increases the statistical reliability of inferences made about the
subgroup, in the context of NCLB’s accountability requirements, doing so results in a decrease in the number of subgroups available for use in AYP determinations.

The HIDOE uses minimum n-counts of forty for making inferences about student proficiency and assessment participation rate. These minimum n-counts give the best balance between the reliability of decisions and the inclusion of the maximum number of subgroups in the accountability system. (See also Critical Element 5.5, “What is the State’s definition of the minimum number of students in a subgroup required for reporting purposes? For accountability purposes?”)

Additionally, the HIDOE has included several features that are designed to maximize decision consistency and the validity of inferences drawn from the accountability system. These include:

- pooling (combining or "averaging") data across grade levels;
- the use of uniform averaging and comparing the average to the most recent year’s results (including the current year), or the current year’s results alone, to the annual proficiency target;
- the use of the safe harbor provision, so that schools that miss an annual proficiency target but show a strong gain in the area missed are not identified; and
- predicating two consecutive years of failing AYP on students failing the same subject (reading or mathematics).

The HIDOE uses the standard error (SE) of the proportion to determine whether the proportion (p) of students who are "proficient" (i.e., who "meet" or "exceed" the State’s academic achievement standards) in math and reading is significantly lower than the proportion of students who should be "proficient" in math and reading. (The State’s annual measurable objectives - or AMOs - for reading and math define the proportion - or percentage - of students who should be "proficient" in math and reading, respectively.) The standard error of the proportion is applied to subgroups at the school and LEA/SEA level if a subgroup at the school or the LEA/SEA level is deemed to have not met the annual measurable objective for reading or math.

\[
\text{SE} = \sqrt{\frac{\text{p}(1-\text{p})}{\text{N}}} \times 100
\]

If the sum of "the proportion of students who are proficient" and "the standard error of the proportion" is
greater than or equal to the annual measurable objective for reading or math (i.e., $p + SE \geq AMO$), then the subgroup is deemed to have met the annual measurable objective for reading or math. If the sum of "the proportion of students who are proficient" and "the standard error of the proportion" is less than the annual measurable objective for reading or math (i.e., $p + SE < AMO$), then the subgroup is deemed to have not met the annual measurable objective for reading or math. The standard error of the proportion is not be applied to participation rate, graduation rate, retention rate, and safe harbor calculations. The standard error of the proportion is limited to not more than five percentage points.

The HIDOE continually examines annual data related to the consistency of the AYP inferences made about subgroups, schools, and the LEA/SEA. The HIDOE has formed a Technical Advisory Committee comprised of national experts in assessment and accountability and enlisted their help in addressing this issue. Technical assistance from national organizations such as CCSSO is available to assist states in the design and conduct of empirical research and evaluation studies of the decision accuracy and consistency of state accountability systems.

The HIDOE will publicly report the method for determining decision consistency, the estimate of decision consistency for the State’s AYP determinations, and the acceptable range of decision consistency via the Department’s ARCH website and in the State’s annual accountability report. The HIDOE will use that information to refine the accountability system.

<td>9.3  How has the State planned for incorporating into its definition of AYP anticipated changes in assessments?</td>
<td>State has a plan to maintain continuity in AYP decisions necessary for validity through planned assessment changes, and other changes necessary to comply fully with NCLB. (^{12}) State has a plan for including new public schools in the State Accountability System. State has a plan for periodically reviewing its State Accountability System, so that unforeseen changes can be quickly addressed.</td>
<td>State’s transition plan interrupts annual determination of AYP. State does not have a plan for handling changes: e.g., to its assessment system, or the addition of new public schools.</td>
</tr>
</tbody>
</table>

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(9.3)
The *HCPS II State Assessment* program has been expanded to include reading and mathematics assessments in grades 4, 6, and 7 in Spring 2006 and science assessments in grades 5, 7, and 11 in Fall 2006. The HIDOE’s working definition of Adequate Yearly Progress has been updated for Spring 2006 to include data from the new grade levels tested in reading and mathematics (i.e., 4, 6, and 7) while maintaining the same (i.e., May 28, 2003) starting points, intermediate goals, and annual measurable objectives for all students to reach proficiency by 2013-14.

\(^{12}\) Several events may occur which necessitate such a plan. For example, (1) the State may need to include additional assessments in grades 3-8 by 2005-2006; (2) the State may revise content and/or academic achievement standards; (3) the State may need to recalculate the starting point with the addition of new assessments; or (4) the State may need to incorporate the graduation rate or other indicators into its State Accountability System. These events may require new calculations of validity and reliability.
As previously discussed in Critical Element 1.3, academic achievement standards in grades 4, 6, and 7 for reading and mathematics were approved by the State Board of Education on September 15, 2005. The cut-scores associated with these tests were developed using a psychometric smoothing technique so they could be coherent with the cut-scores already established for grades of 3, 5, 8, and 10 in reading and mathematics. The cut-scores for grade 4 were established by averaging the percentage of students in each proficiency level at grades 3 and 5. The cut-scores for grades 6 and 7 were established by taking a weighted average of the percentage of students in each proficiency level at grades 5 and 8. This process allowed the impact data to be coherent across grades. This procedure was recommended by the HIDOE's Technical Advisory Committee in February 2005.

Students who attend a “new” school are accounted for in the first year of the school’s operation by including those students’ scores in the AYP determination for the LEA/SEA. The goal of attaining 100% proficiency for all students by 2013-14 applies to both new schools and existing schools. Adequate yearly progress determinations for new schools begin in their second year of operation when the scores of students attending the school are included in AYP determinations for the schools.
PRINCIPLE 10. In order for a public school or LEA to make AYP, the State ensures that it assessed at least 95% of the students enrolled in each subgroup.

</tbody>
</table>

STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS

(10.1)
The HIDOE’s statewide Student Information System and use of a unique student identifier allow for accurate student accounting and tracking. The HIDOE’s Evaluation Section performs the calculation of participation rates on the state assessments. These calculations are done from a complete student roster file that identifies each student in the State who is enrolled at the time of testing. Additionally, each school is responsible for providing documentation to the HIDOE’s Test Development Section for each student who was not tested. The HIDOE compares the number of students in test scores files with official enrollment counts, and these comparisons must show that all students were tested or can be otherwise accounted for.

As previously noted in Critical Element 2.1 ("How does the State’s Accountability System include all students in the State?"): All students enrolled at the time of testing are expected to participate in the Hawaii State
Assessment. A school’s "participation rate count date" is the Monday of the week when
the school administers the first reading or math test session to the majority of its
students. (If Monday is a state holiday, then the school's participation rate count date is
Tuesday.) A school's participation rate count date operationally defines "enrolled at the
time of testing" and comprises the denominator of the assessment participation rate
measure used in determining AYP for the state, for the school, and for all required
student subgroups. For purposes of systemwide accounting, the HIDOE uses March 1st
or, if March 1st falls on a Saturday, Sunday, or state holiday, the first Monday in the
month of March as a fixed census date. (See Critical Elements 2.2, 2.3, and 10.1 for
related details.)

Participation rates are computed as:

The number of students tested divided by the number of students enrolled at the time of
testing.

One modification to the preceding calculation rule is necessary in order to account completely and
appropriately per school for students who transfer during the assessment window. That is, for any
student who transfers from one Hawaii public school to another after the start of the assessment window,
the school to which the student transferred (receiving school) is to send any assessment response
booklet(s) to the Test Development Section, which will then combine them with any assessment response
booklet(s) from the student's previous (sending) school. For participation purposes, the general rule is to
attribute these transferring students to the school where the student took the first reading or mathematics
test sessions. For proficiency purposes, these transferring students are attributed to the school where
the full academic year requirement is met.

Students who exit the Hawaii public school system prior to taking any part of the state assessment, which
may occur if a student exits the system before the Monday of the week when the school begins testing,
are not part of the number of students "enrolled at the time of testing" for the purpose of calculated
assessment participation rates.

Participation rates are calculated for all schools and for the LEA/SEA and for all subgroups for which the
number of students meets the state standard of forty for the statistical reliability of participation rates. The
participation rate is not calculated if there is an insufficient number in the group for statistical reliability.

The failure of a school to test 95% of its students or the students in any target subgroup for which there is
a number sufficient for statistical reliability results in the school being identified as failing to make Adequate Yearly Progress. If a school or subgroup, or both, does not meet the 95% requirement, then the HIDOE uses data from the previous year to average the participation rate data for the school or subgroup, or both, as needed. If this two-year average does not meet the 95% requirement, then the HIDOE uses data from the previous two years to average the participation rate data for a school or subgroup, or both, as needed. If this three-year average does not meet the 95% requirement, then the school is deemed to have not met this requirement.

Invalid test sessions do not count for participation or proficiency purposes, or both. Out-of-grade-level testing is not allowed under any circumstances. A student will be deemed to have not participated in the Hawaii State Assessment or the Hawaii State Alternate Assessment if a school administers an out-of-grade-level test to a student.

If the HIDOE determines that:

1. The integrity of a test session was compromised; and
2. The compromised test session must be retaken,
then the compromised test session will not be counted for participation or proficiency purposes, or both, until the compromised test session is retaken.

Medical Emergencies

Students who are unable to take the Hawaii State Assessment or the alternate assessment during the State's official test administration window because of a "unique, significant medical emergency" are not counted for participation purposes. A student's "physician" must state, in writing, that the student was medically unable to take part in the Hawaii State Assessment (with or without accommodations) or the alternate assessment (for students with the most significant cognitive disabilities). The physician's signed report must include a description of the medical emergency that caused the student to be deemed medically unable to take part in the Hawaii State Assessment or the alternate assessment. The student's medical emergency may be temporary or persistent in nature; however, it must extend without interruption from the date the school started testing (e.g., Wednesday, March 1, 2006) to the last day of the State's official test administration window (e.g., Thursday, April 13, 2006).

**STATE RESPONSE AND STATE ACTIVITIES FOR MEETING REQUIREMENTS**

(10.2)
The procedure for calculating participation rates is explained in Critical Element 10.1. The participation rate is included as a requirement for AYP for any subgroup for which the number of students enrolled in the school meets or exceeds the minimum n-count for participation rate (see also Critical Element 5.5).
Appendix A
Required Data Elements for State Report Card

1111(h)(1)(C)

1. Information, in the aggregate, on student achievement at each proficiency level on the State academic assessments (disaggregated by race, ethnicity, gender, disability status, migrant status, English proficiency, and status as economically disadvantaged, except that such disaggregation shall not be required in a case in which the number of students in a category is insufficient to yield statistically reliable information or the results would reveal personally identifiable information about an individual student.

2. Information that provides a comparison between the actual achievement levels of each student subgroup and the State’s annual measurable objectives for each such group of students on each of the academic assessments.

3. The percentage of students not tested (disaggregated by the student subgroups), except that such disaggregation shall not be required in a case in which the number of students in a category is insufficient to yield statistically reliable information or the results would reveal personally identifiable information about an individual student.

4. The most recent 2-year trend in student achievement in each subject area, and for each grade level, for the required assessments.

5. Aggregate information on any other indicators used by the State to determine the Adequate Yearly Progress of students in achieving State academic achievement standards disaggregated by student subgroups.

7. Information on the performance of local educational agencies in the State regarding making adequate yearly progress, including the number and names of each school identified for school improvement under section 1116.

8. The professional qualifications of teachers in the State, the percentage of such teachers teaching with emergency or provisional credentials, and the percentage of classes in the State not taught by highly qualified teachers, in the aggregate and disaggregated by high-poverty compared to low-poverty schools which (for this purpose) means schools in the top quartile of poverty and the bottom quartile of poverty in the State.
