ABSTRACT
The purpose of this brief commentary is to determine which language skill Polish higher school learners think ought to be practiced most frequently during Spanish classes. Fifteen undergraduate students who study at AGH University of Science and Technology, Poland were surveyed, and the authors found that most learners (73%) want to practice speaking in person in Spanish classes. The theoretical framework for this article is provided by the general idea of the school as an organization and social institution.

Note: Thank you to Dr. Kimberly Grantham Griffith and Dr. William Allan Kritsonis for their assistance in getting this article published in America. See: www.nationalforum.com

Introduction

Foreign languages have been part of the Polish school curriculum for some time. Starting in the late 1940’s, the Russian language was adopted as the primary foreign language to be instructed to all students from the age of 11 and upwards, regardless of the kind of institution (Janowski, 1992, 43). A “West European language” was offered as a “second foreign language” only to pupils attending full secondary school, in other words, institutions leading to a school leaving certificate (Janowski, 1992, 43). From the 1989-90 academic year onward the learning of Russian ceased to be compulsory, and, at about the same time, the Polish government began to encourage the widespread teaching of West European languages in schools (Janowski, 1992, 50).

Purpose of the Article

The purpose of this brief commentary is to determine which language skill Polish higher school learners think ought to be practiced most frequently during Spanish classes.

New Training Initiative: Europe, Canadian Company, American Peace Corps

Fifty-five new teacher training colleges have been opened throughout Poland in support of the government's policy (Janowski, 1992, 51) and by 1992 two foreign organizations had endorsed this new training initiative by sending volunteers to Poland: 1) Solidarity Eastern Europe, a Canadian company and 2) the American Peace Corps. Dr. Butler has first-hand knowledge about the activities of these organizations. In 1991, he was recruited by Solidarity Eastern Europe to teach English at Rzeszow University of Technology, and while he was there had the pleasure to interface academically with a Peace Corps worker.
Motivation and Theoretical Framework for this Study

The motivation for this work is Spain’s current “open door” policy towards Polish workers. Citizens of Poland have the same right to be employed in Spain as Spaniards. Therefore, it is now more important than ever for Polish students to learn Spanish.

The theoretical framework for this article is supplied by the general notion of the school as an organization and social institution.

Research Question

Which of the following language skills do Polish higher school learners think should be practiced most often in Spanish classes: speaking in person, listening, reading or writing? The predicted choice was “speaking in person” because students have fewer opportunities to speak Spanish outside of the classroom than to listen to, read or write it.

Student Choices and Results

On 12 Nov 2007 fifteen undergraduate students who study at AGH University of Science and Technology, Poland were asked to indicate on sheets of paper the language skill they thought ought to be practiced most often in Spanish classes. The results are as follows: 73% (speaking in person), 0% (writing) 14% (reading) and 13% (listening). That means that most learners want to practice speaking when they are in Spanish classes. Therefore, the predicted answer to our research question was confirmed.

Concluding Remarks

Our findings have implications for Spanish language teaching at Polish higher schools. It is recommended that more research be carried out, in the future, involving additional institutions.
