

General Achievement Trends — Ohio

K-12 enrollment — 1,751,511

The raw data used to develop these state profiles, including data for additional grade levels and years before 2002, can be found on the CEP Web site at www.cep-dc.org. Click on the link on the left for No Child Left Behind. In the Document Library, look for the most recent report on student achievement since 2002. Below the name of the report, click on the link for View State Profiles and Worksheets. Scroll down the page, and click on the Worksheet links for any state.

Overall Achievement — Key Findings

General results

The tables in this profile present state test results in reading and math at three achievement levels (basic, proficient, and advanced) and at one grade each at the elementary, middle, and high school levels. These data are more complete than the percentage of students scoring proficient that is the main indicator used to determine adequate yearly progress under the No Child Left Behind Act.

Ohio has made a number of changes to its testing program in recent years. As a result, the number of years with comparable test data varies for different grade levels and subjects. All trends extend through 2008, but the starting years are 2005 for elementary and middle school reading and middle school math, 2006 for elementary math, and 2004 for high school reading and math.

Overall, Ohio students made gains at the **basic** and **proficient** achievement levels; results were somewhat more mixed at the **advanced** level.

Specific results

- The percentage of students performing at or above the **basic** level in reading increased slightly at the elementary and middle school grades analyzed and grew at a moderate-to-large rate at the high school level. In math, there was a moderate-to-large decline in the percentage basic at the elementary grade analyzed but moderate-to-large gains at the middle and high school levels.
- In reading, the percentage of students scoring at the **proficient** level and above increased at a moderate-to-large rate at the elementary and high school grades analyzed and at a slight rate at the middle school grade. In math, the percentage proficient decreased at a moderate-to-large rate at the elementary grade analyzed but rose at a moderate-to-large rate at the middle and high school grades.

- There were slight declines in the percentage of students reaching the **advanced** level in reading at the elementary and high school grades analyzed but a moderate-to-large gain at the middle school grade. In math, the percentage advanced decreased at a moderate-to-large rate at the elementary grade analyzed but went up at a moderate-to-large rate at the middle and high school grades.

Data Limitations

Years of comparable percentage proficient data

New tests were phased in so years of comparable data vary by grade:

Grade 3: 2004–2008 for reading, 2005–2008 for math

Grades 4 and 5: 2005–2008 for reading, 2006–2008 for math

Grade 6: 2006–2008 for reading and math

Grade 7: 2006–2008 for reading, 2005–2008 for math

Grade 8: 2005–2008 for reading and math

High school: 2004–2008

Years of data needed to compute effect sizes

Data needed to compute effect sizes were unavailable.

Test Characteristics

The characteristics highlighted below are for the state reading and mathematics tests used for accountability under the No Child Left Behind Act (NCLB).

Test(s) used for NCLB accountability

Ohio Achievement Test (OAT)

Ohio Graduation Test (OGT)

Ohio Alternate Assessment

Grades tested for NCLB accountability

3-8, 10

State labels for achievement levels

OH uses five achievement levels: Limited/Below basic, Basic, Proficient, Accelerated, and Advanced. For our analyses we treated Basic as Basic, Proficient as Proficient, and Accelerated + Advanced as Advanced.

High school NCLB test also used as an exit exam?

Yes

First year test used

2003-04: OAT administered in grade 3 reading for first time

March 2004: Current form of OGTs in reading and math administered

	for first time but without graduation consequences
	2005: All five subject OGTs administered as a graduation requirement for the class of 2007
	2005: OATs added in reading grades 4, 5, and 8; writing grade 4; and math grades 3, 7, and 8
	2006: OATs added in reading grades 6 and 7; and math grades 4, 5, and 6
	2007: OATs added in science grades 5 and 8; social studies grades 5 and 8; and writing grade 7
Time of test administration	Spring (OAT in grade 3 reading also administered in fall; OGTs administered more than once per year for graduation purposes)
Major changes in testing system (2002–present)	<p>2004: Ohio Achievement Tests implemented as replacement for state Proficiency Tests by 2006</p> <p>2004: OAT cut scores established in reading and mathematics</p> <p>2005: OAT cut scores established in science, social studies, and writing</p> <p>Spring 2005: Final administration of Proficiency Tests</p> <p>2005-06: All the grades 3-8 and 10 tested and included in AYP for the first time. Previously, testing had included reading at grades 3-6, 8, and 10 and math at grades 3, 4, 6-8, and 10; and AYP was based on reading in grades 3, 6, and 10 and math in grades 4, 6, and 10.</p> <p>2005: OGTs administered as exit exam for class of 2007</p>

Overall Achievement — Percentages Proficient

Figure OH-1. Percentage of Students Scoring at the Proficient Level and Above in Reading

Table OH-1. Percentage of Students Scoring at the Proficient Level and Above in Reading

Grade Level	Reporting Year										Pre-NCLB Average Yearly Percentage Point Gain 1999-2002 ¹	Post-NCLB Average Yearly Percentage Point Gain 2002-2008 ¹		
	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008				
Grade 3						78%	77%	75%	78%	77%		NA	-0.2	
Grade 4							77%	77%	80%	81%		NA	1.5	
Grade 5							77%	75%	80%	73%		NA	-1.4	
Grade 6									84%	78%	80%	NA	-2.0	
Grade 7									79%	78%	77%	NA	-0.8	
Grade 8								79%	77%	80%	79%	NA	0.2	
OGT								79%	92%	89%	87%	85%	NA	1.7

Table reads: The percentage of 3rd graders who scored at the proficient level and above on the state reading test decreased from 78% in 2004 to 77% in 2008. The average yearly loss in the percentage proficient in grade 3 reading was 0.2 percentage points per year after NCLB was enacted.

¹Averages are subject to rounding error.

Figure OH-2. Percentage of Students Scoring at the Proficient Level and Above in Mathematics

Table OH-2. Percentage of Students Scoring at the Proficient Level and Above in Mathematics

Grade Level	Reporting Year										Pre-NCLB Average Yearly Percentage Point Gain 1999-2002 ¹	Post-NCLB Average Yearly Percentage Point Gain 2002-2008 ¹	
	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008			
Grade 3							70%	75%	85%	79%		NA	3.0
Grade 4								77%	76%	75%		NA	-1.1
Grade 5								63%	61%	62%		NA	-0.5
Grade 6								68%	74%	77%		NA	4.2
Grade 7							59%	63%	71%	69%		NA	3.4
Grade 8							60%	69%	72%	73%		NA	4.2
OGT							68%	82%	83%	81%	79%	NA	2.7

Table reads: The percentage of 3rd graders who scored at the proficient level and above on the state math test increased from 70% in 2005 to 79% in 2008. The average yearly gain in the percentage proficient in grade 3 math was 3.0 percentage points per year after NCLB was enacted.

¹Averages are subject to rounding error.

Overall Achievement — Percentages Advanced, Proficient, and Basic

How to read figures 3 and 4 and tables 3 and 4

The stacked bars in figures 3 and 4 show the percentages of students scoring at the basic, proficient, and advanced levels on the state tests used for NCLB accountability. The following information may be helpful in interpreting the figures:

- The percentage proficient and above—the benchmark used to determine adequate yearly progress under NCLB—is the sum of the middle and top segments of the bars (percentage proficient plus percentage advanced).
- The percentage basic and above is the sum of all three segments of the bars (percentage basic plus percentage proficient plus percentage advanced).
- The sums that result from adding the segments of the bars in these ways correspond with the percentages proficient and above, and basic and above, shown in tables 3 and 4. In a few instances, however, the sums in the figures may differ from those in the tables by a percentage point due to rounding.
- The bars do not total 100% because students who score *below* the basic level are not displayed.
- By looking at the percentages in each segment of the bars, one can see how achievement trends at the three levels interact. Ideally, one would want to see increases at all three levels, as more students move from below basic to basic achievement, from basic to proficient, and from proficient to advanced. But other scenarios may also be illuminating. For example, gains may occur in the percentage basic even if the percentage proficient and above has stayed the same, suggesting that progress has been made in moving students from the below basic to the basic level. Or, if the percentage proficient has grown while the percentages basic and advanced have shrunk, this suggests that educators may have focused a great deal of attention on moving students from the basic to proficient levels.
- Some states use different labels for their achievement levels instead of basic, proficient, and advanced. The specific state labels are listed in the Test Characteristics section at the beginning of this profile.

Figure OH-3. Percentages of Students Scoring at the Advanced, Proficient, and Basic Levels in Reading

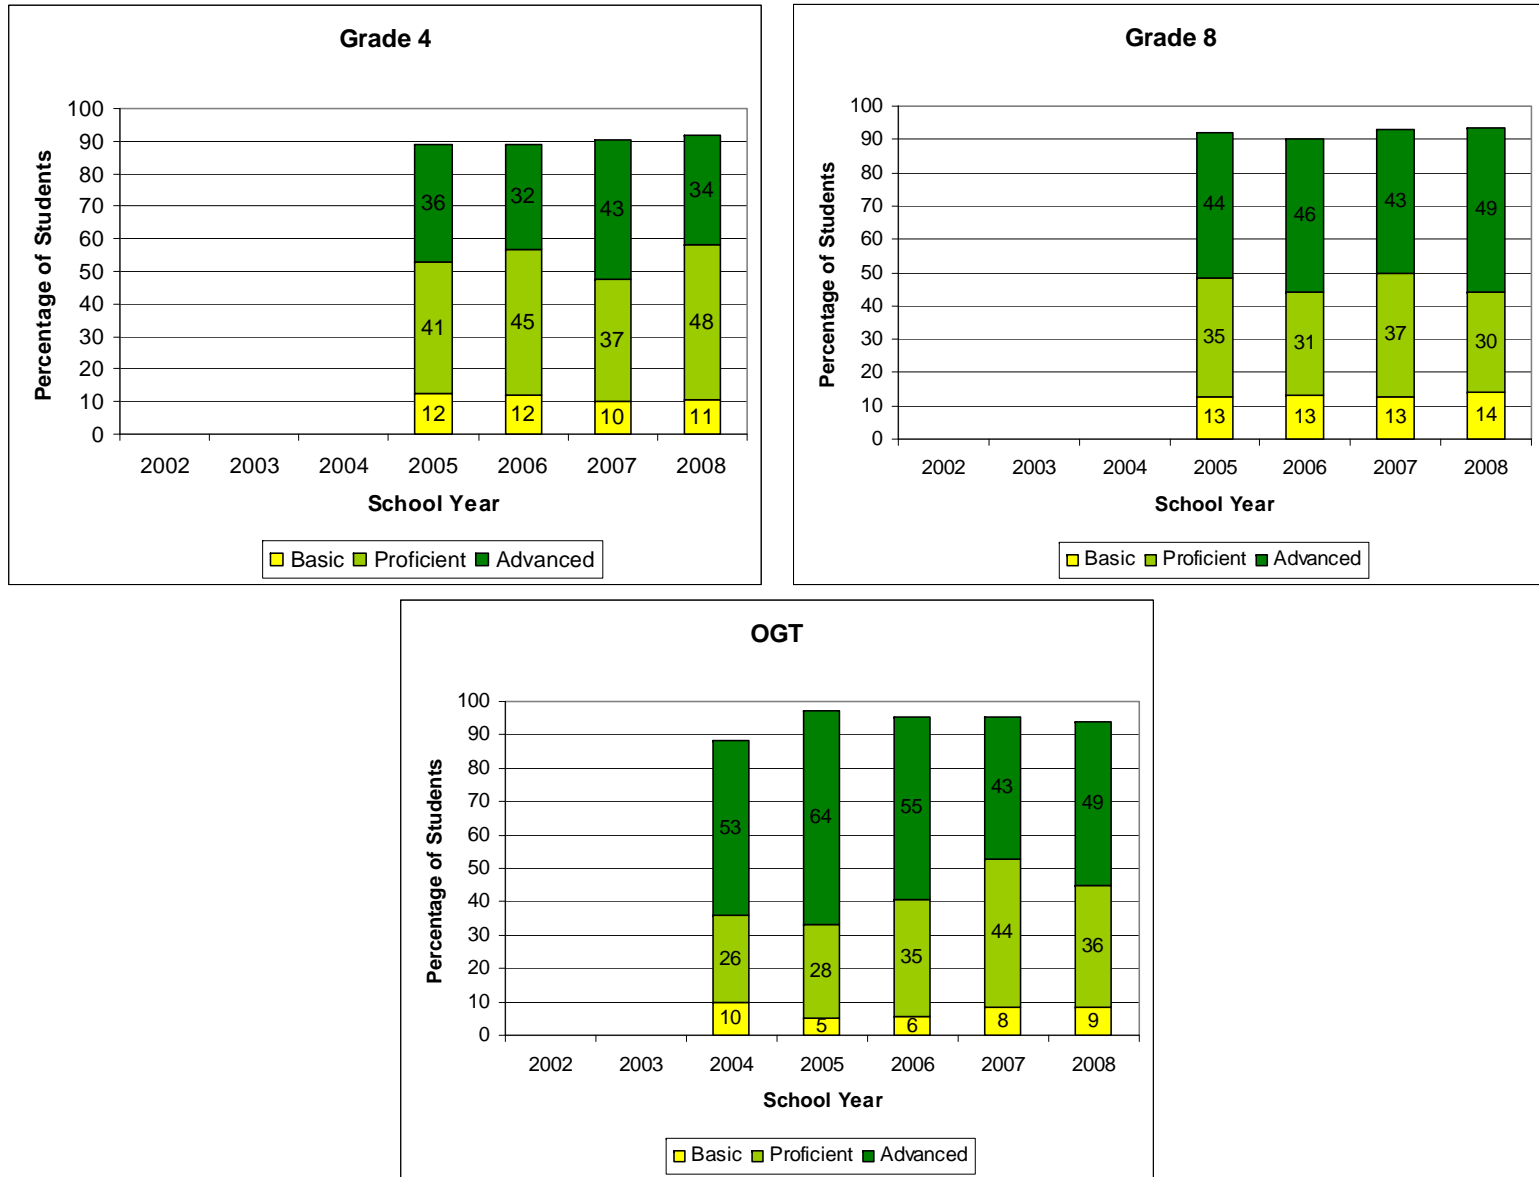

Table OH-3. Percentages of Students Scoring at the Advanced, Proficient and Above, and Basic and Above Levels in Reading

Achievement Level	Reporting Year							Average Yearly Percentage Point Gain ¹
	2002	2003	2004	2005	2006	2007	2008	
Grade 4								
Advanced				36%	32%	43%	34%	-0.8
Proficient and Above				77%	77%	80%	81%	1.5
Basic and Above				89%	89%	90%	92%	0.9
Grade 8								
Advanced				44%	46%	43%	49%	1.9
Proficient and Above				79%	77%	80%	79%	0.2
Basic and Above				92%	90%	93%	93%	0.5
OGT								
Advanced			53%	64%	55%	43%	49%	-0.9
Proficient and Above			79%	92%	89%	87%	85%	1.7
Basic and Above			89%	97%	95%	95%	94%	1.3

Table reads: The percentage of 4th graders who scored at the advanced level on their state reading test decreased from 36% in 2005 to 34% in 2008. During this period, the average yearly loss in the percentage advanced was 0.8 percentage points per year in grade 4 reading.

¹Averages are subject to rounding error.

Figure OH-4. Percentages of Students Scoring at the Advanced, Proficient, and Basic Levels in Mathematics

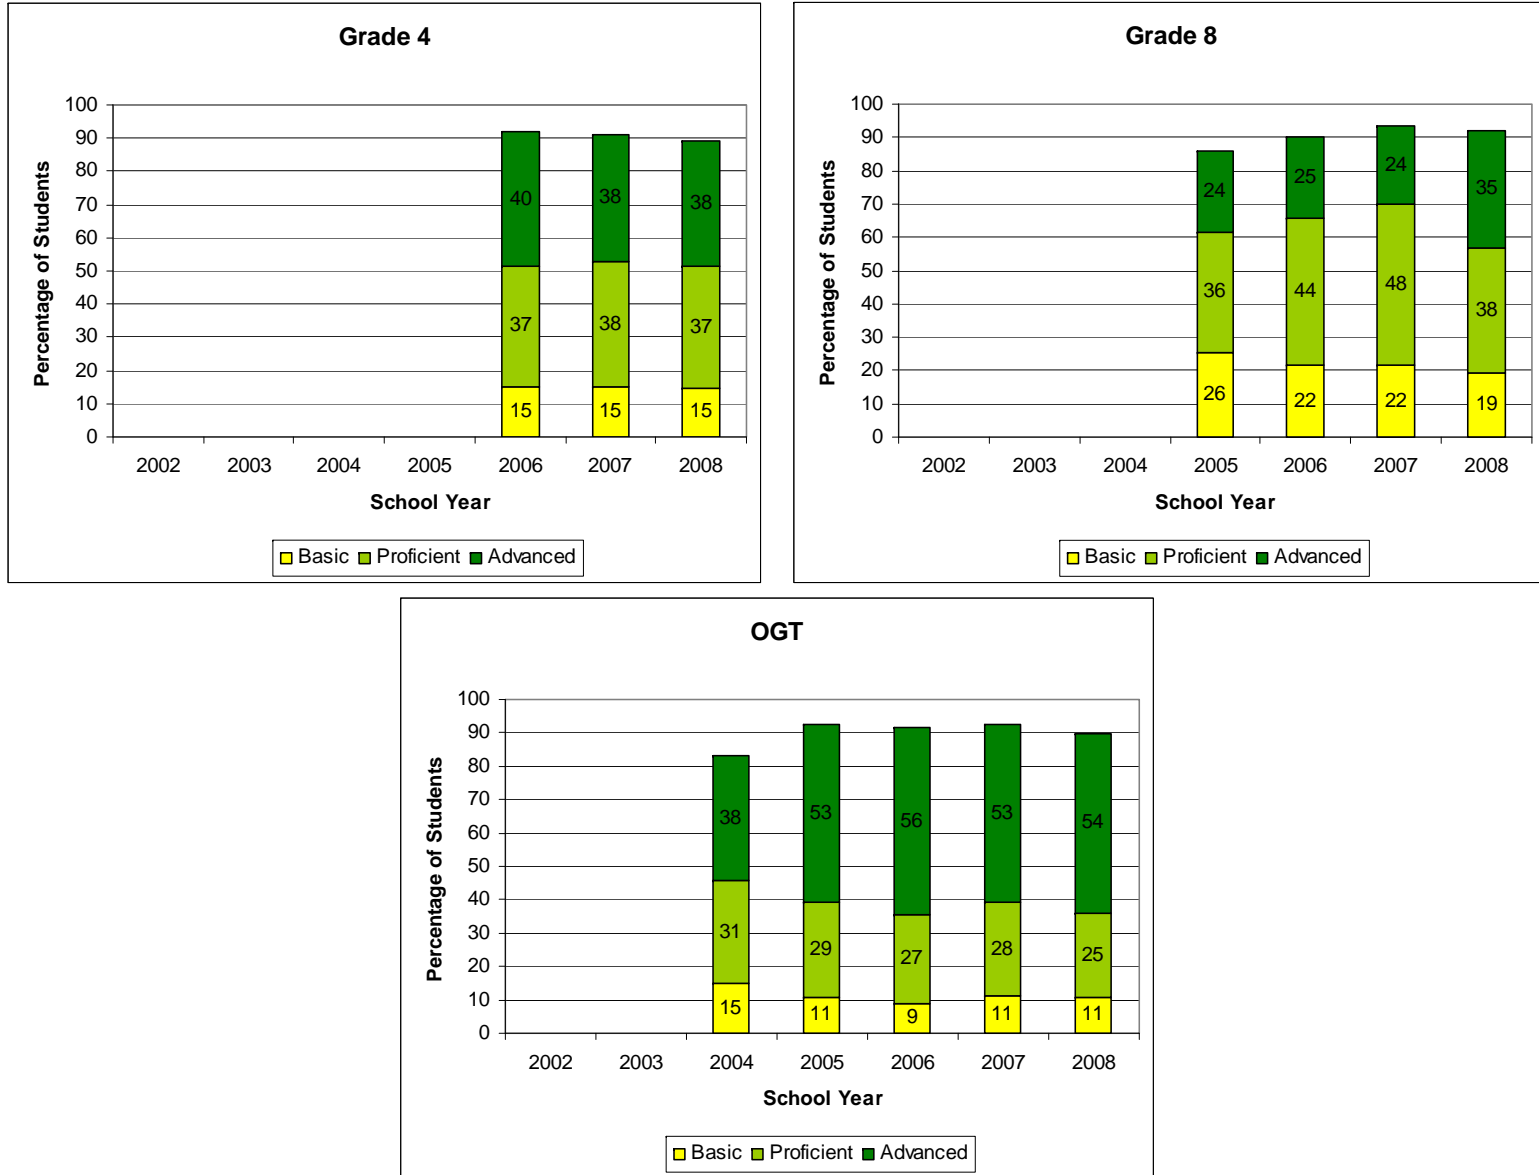

Table OH-4. Percentages of Students Scoring at the Advanced, Proficient and Above, and Basic and Above Levels in Mathematics

Achievement Level	Reporting Year							Average Yearly Percentage Point Gain ¹
	2002	2003	2004	2005	2006	2007	2008	
Grade 4								
Advanced					40%	38%	38%	-1.4
Proficient and Above					77%	76%	75%	-1.1
Basic and Above					92%	91%	89%	-1.3
Grade 8								
Advanced				24%	25%	24%	35%	3.7
Proficient and Above				60%	69%	72%	73%	4.2
Basic and Above				86%	90%	93%	92%	2.1
OGT								
Advanced			38%	53%	56%	53%	54%	4.1
Proficient and Above			68%	82%	83%	81%	79%	2.7
Basic and Above			83%	92%	92%	92%	90%	1.7

Table reads: The percentage of 4th graders who scored at the advanced level on their state math test decreased from 40% in 2006 to 38% in 2008. During this period, the average yearly loss in the percentage advanced was 1.4 percentage points per year in grade 4 math.

¹Averages are subject to rounding error.

Key Terms

Percentage proficient (and above) — The percentage of students in a group who score at and above the cut score for “proficient” performance on the state test used to determine progress under NCLB. The Act requires states to report student test performance in terms of at least three achievement levels: basic, proficient, and advanced. Adequate yearly progress determinations are based on the percentage of students scoring at the proficient level and above.

Percentage basic (and above) — The percentage of students in a group who score at and above the cut score for “basic” performance on the state test used to determine progress under NCLB.

Percentage advanced — The percentage of students in a group who reach or exceed the cut score for “advanced” performance on the state test used to determine progress under NCLB.

Moderate-to-large gain — For the percentage basic, proficient, or advanced, an average gain of 1 or more percentage points per year. For effect size, an average gain of 0.02 or greater per year.

Slight gain — For the percentage basic, proficient, or advanced, an average gain of less than 1 percentage point per year. For effect size, an average gain of less than 0.02 per year.

Moderate-to-large decline — For the percentage basic, proficient, or advanced, an average decline of 1 or more percentage points per year. For effect size, an average decline of 0.02 or greater per year.

Slight decline — For the percentage basic, proficient, or advanced, an average decline of less than 1 percentage points per year. For effect size, an average decline of less than 0.02 per year.

Effect size — A statistical tool that conveys the amount of difference between test results using a common unit of measurement which does not depend on the scoring scale for a particular test.

Accumulated annual effect size — The cumulative gain in effect size over a range of years.

Mean scale score — The arithmetical average of a group of test scores, expressed on a common scale for a particular state’s test. The mean is calculated by adding the scores and dividing the sum by the number of scores.

Standard deviation — A measure of how much test scores tend to deviate from the mean—in other words, how spread out or bunched together test scores are. If students’ scores are bunched together, with many scores close to the mean, then the standard deviation will be small. If scores are spread out, with many students scoring at the high or low ends of the scale, then the standard deviation will be large.

Cautions and Explanations

Different labels for achievement levels — For consistency, all of the state profiles developed for this report use a common set of labels (basic, proficient, and advanced) for the main achievement levels required by NCLB. In practice, however, some states may use different labels, such as “meets standard” instead of proficient, and some states have established additional achievement levels beyond those required by NCLB.

Different names for subgroups — For the sake of consistency and ease of data tabulation, all of the state profiles developed for this report use a common set of names for the major student subgroups. In practice, however, states use various names for subgroups that may differ from those used here (such as using “Hispanic” instead of “Latino,” or “special education students” instead of “students with disabilities”). Moreover, a few states separately track the performance of subgroups not included in the analyses for this report.

Special caution for students with disabilities and English language learners — Trends for students with disabilities and English language learners should be interpreted with caution because changes in federal guidance and state accountability plans may have altered which students in these subgroups are tested for accountability purposes, how they are tested, and when their test scores are counted as proficient under NCLB. These factors could affect the year-to-year comparability of test results.

Inclusion of former English language learners — In many states, the subgroup of English language learners (also known as limited English proficient students) includes students who were formerly English language learners but who have achieved English language proficiency or fluency in the last two years. Federal NCLB regulations permit states to include these formerly ELL students (sometimes referred to as “redesignated fluent English proficient” students) in the ELL subgroup for up to two years for purposes of NCLB accountability.

Limitations of percentage proficient measure — The percentage proficient, the main gauge of student performance under NCLB, can be easily understood and gives a snapshot of how many students have met their state’s performance expectations. But it also has several limitations as a measure of student achievement. Users of percentage proficient data should keep in mind these limitations, particularly the following:

- * “Proficient” means different things across different states. States vary widely in curriculum, learning expectations, and tests, and state tests differ considerably in their difficulty and cut scores for proficient performance.
- * Although this study has taken steps to avoid comparing test data where there have been “breaks” in comparability resulting from new tests, changes in content standards, revised cut scores, or other major changes in testing programs, the year-to-year comparability of test results in the same state may still be affected by less obvious policy and demographic changes.
- * Changes in student performance may occur that are not reflected in percentage proficient data, such as an increase in the number of students reaching performance levels below and above proficient (such as the basic or advanced levels).
- * The size of the achievement gaps between various subgroups depends in part on where a state sets its cut score for proficiency. For example, if a proficiency cut score is set so high that almost nobody reaches it or so low that almost everyone reaches it, there will be little apparent achievement gap. By contrast, if the cut score is closer to the mean test score, the gaps between subgroups will be more apparent.

Difficulty of attributing causes — Although the tables above show trends in test scores since the enactment of NCLB, one cannot assume that these trends have occurred *because* of NCLB. It is always difficult to determine a cause-and-effect relationship between test score trends and any specific education policy or program due to the many federal, state, and local reforms undertaken in recent years and due to the lack of an appropriate “control” group of students not affected by NCLB.
