New Mexico State Summary

2007

State Teacher Policy Yearbook

Progress on Teacher Quality

National Council on Teacher Quality
Acknowledgments

STATES
Our most important partners in this effort have been state education agencies, whose extensive experience has helped to ensure the factual accuracy of the final product. Every state formally received two different drafts of the Yearbook for comment and correction, first in spring 2006 and again in December 2006. States also received a final draft of their reports a month prior to release. All but three states graciously responded to our many, many inquiries. While states have not always agreed with our approaches, most have exhibited a remarkable willingness to reflect upon the impact of their current policies—and to acknowledge that the system needs fixing.

FUNDERS
NCTQ owes a great debt of gratitude to the pioneer funders for this first edition of the State Teacher Policy Yearbook:

- Achelis Foundation
- Bodman Foundation
- Daniels Fund
- Fisher Family Foundation
- Gleason Foundation
- The Joyce Foundation
- Ewing Marion Kauffman Foundation
- Koret Foundation
- The Lynde and Harry Bradley Foundation
- Martha Holden Jennings Foundation
- Milken Family Foundation
- The Teaching Commission
- Thomas B. Fordham Foundation

The National Council on Teacher Quality does not accept any direct funding from the federal government.

STAFF
NCTQ acknowledges the following individuals for their involvement in preparing this report. Our principal staff was Jess Castle and Sandi Jacobs. Area analysts were Andrew Campanella, Carl Cole, Nicole Fernandez, Catherine Kelliher, Whitney Miller, Emma Snyder, and Danielle Wilcox. Research analysts included Emily Cohen, Eric Dang, Paige Donehower, Elizabeth McCorry, Tess Mullen and Nathan Sheely. Thank you to Colleen Hale at Summerhouse Studios who designed the print and web versions of the Yearbook.
About the *Yearbook*

The *State Teacher Policy Yearbook* examines what is arguably the single most powerful authority over the teaching profession: state government. State authority over the profession—whether through regulation approved by state boards of education or professional standards boards or by laws passed by legislatures—is far reaching. These policies have an impact on who decides to enter teaching, who stays—and everything in between.

The *Yearbook* provides an unprecedented analysis of the full range of each state’s teacher policies, measured against a realistic blueprint for reform. It identifies six key areas in urgent need of policy attention, along with specific policy goals within these areas. To develop these goals, three years ago, we began to work with our own nationally respected advisory board, eventually widening the scope to consult with over 150 different policy groups, academics, education think tanks, and national education organizations, some of which have quite different perspectives than ours. The best advice we received came from the states themselves.

The teacher quality goals in this volume all meet four critical benchmarks:

1. They are supported by a strong rationale, grounded in responsible research. (A full list of the citations to support each goal can be found at www.nctq.org.)
2. Where applicable, they rely on meaningful inputs shown to improve student achievement and measurable outputs.
3. They are designed to make the teaching profession more responsive to the current labor market.
4. They can work in all 50 states.

While a national summary report is available, we have customized the *Yearbook* so that each state has its own report, with its own analyses and data. Users can download any one of our 51 state reports (including the District of Columbia) from our website (www.nctq.org). Since some national perspective is always helpful, each state report contains charts and graphs showing how the state performed compared to all other states. We also point to states that offer a “Best Practice” for other states to emulate.

There is no overall grade for a state. Instead, we capture the bird’s-eye view of each state’s performance though a descriptive term such as “weak but progressing” or “needs major improvement.” In order to provide a useful and instantly recognizable standard of performance, we have issued grades to states in each of the six areas. Because there are so many individual goals, we rely on a familiar and useful graphic symbol—circles filled in to various degrees—to reflect progress being made toward meeting these goals. Although somewhat complex, we chose this rating system as the fairest and most easily discernible way to depict the effectiveness of current state educational policies.

Finally, let me emphasize that we view the *Yearbook* as the beginning of a conversation. Not for a moment do we think that the blueprint presented here solves, once and for all, this tricky and complicated business of regulating the teaching profession. But what we have done is put forward a well-informed view of how states might improve, one which we believe is worthy of consideration.

We fully anticipate that the content of the *Yearbook* will evolve from year to year, responding to new information, a lot more feedback, and renewed research.

Sincerely,

Kate Walsh, *President*
Executive Summary: New Mexico

Welcome to the New Mexico edition of the National Council on Teacher Quality’s *State Teacher Policy Yearbook*. This analysis is the first of what will be an annual look at the status of state policies impacting the teaching profession. It is our hope that this report will help focus attention on areas where state policymakers could make improvements to benefit both students and teachers.

Our policy evaluation is broken down into six areas that include a total of 27 goals. Broadly, these goals examine the impact of state policy on the preparation, certification, licensure, compensation and effectiveness of teachers across the elementary, secondary and special education spectra. New Mexico’s progress toward meeting these goals is summarized on the following page.

Overall, New Mexico has done a good job in meeting some of our goals, but there is considerable work that needs to be done in all areas. New Mexico completely missed eight goals, met a small portion of eight, partially met seven, nearly met one and fully met three.

New Mexico has stronger general education requirements for elementary teacher candidates than most other states, although there are still gaps in essential areas. The state, however, needs to work to improve other areas of teacher preparation, especially its program approval process.

The body of the report provides a more detailed breakdown of the state’s strengths and weaknesses in each area.

Overall Performance: Unsatisfactory
Executive Summary: How is New Mexico Faring?

STATE ANALYSIS

AREA 1 – Meeting NCLB Teacher Quality Objectives
New Mexico needs to improve its data policies, which can help it ameliorate inequities in teacher assignments. The state’s subject matter preparation policies for future elementary teachers are very good, although its policies for future secondary teachers need some improvement. New Mexico is phasing out its use of the HOUSSE route, but it has not defined a subject matter major.

AREA 2 – Teacher Licensure
New Mexico’s standards lack specificity and do not clearly refer to the knowledge and skills that new teachers must have before beginning to teach. Teachers must pass their licensure tests before they enter the classroom. State policies do not ensure that teachers are prepared in scientifically based reading instruction. The state has taken a first step toward facilitating out of state teacher licensure reciprocity, but its policies could be improved. New Mexico does not recognize distinct levels of academic caliber at the time of initial certification.

AREA 3 – Teacher Evaluation and Compensation
In the area of teacher accountability, New Mexico has some positive practices as well as some room for improvement. While the state requires limited objective and subjective evidence of teacher effectiveness, it does not make this the preponderant criterion of teacher evaluations. The state only requires full, comprehensive evaluations every three years, although the state does require a minimal assessment during the intervening years. Promoting teacher effectiveness is further weakened by a lack of value-added data and by granting tenure after only three years. The state does not burden districts with a minimum salary schedule, only mandating a minimum starting salary for each of the state’s three licensing tiers.

AREA 4 – State Approval of Teacher Preparation Programs
New Mexico does not do enough to hold its programs accountable for the quality of their preparation. It has failed to address their tendency to require excessive amounts of professional coursework. Furthermore, New Mexico does not require aspiring teachers to demonstrate basic skills before entering a teacher preparation program. The state appropriately separates accreditation from state approval.

AREA 5 – Alternate Routes to Certification
New Mexico does not currently provide a genuine alternate route into the teaching profession. The alternate route the state offers has structural shortcomings combined with low and inflexible admissions standards. New Mexico does not ensure that programs do not require excessive coursework, and it does not ensure that adequate support is provided to new teachers. In addition, the state does not use objective performance data to hold its alternate route programs accountable for the quality of their teachers. New Mexico has a restrictive policy regarding licensure reciprocity for teachers from out of state who were prepared in an alternate route program, making it difficult for some teachers to transfer their licenses.

AREA 6 – Preparation of Special Education Teachers
New Mexico’s standards for special education teachers are better than those of many states, and they adequately address all of the critical areas of knowledge required to teach students with disabilities. However, the state places no limit on the amount of professional education coursework that its teacher preparation programs can require of special education candidates, resulting in program excesses. The state does not ensure that elementary special education candidates receive preparation in subject matter relevant to the PK-6 classroom. New Mexico also requires secondary special education candidates to complete the equivalent of a major in an academic content area. These requirements should help teachers become highly qualified. New Mexico, however, has not developed a streamlined HOUSSE route to help new secondary special education teachers meet additional subject matter requirements once they are in the classroom.

**APPENDIX**

- Goals with this icon are especially important for attracting science and mathematics teachers.
Area 1: Goal A – Equitable Distribution of Teachers

The state should contribute to the equitable distribution of quality teachers by means of good reporting and sound policies.

GOAL COMPONENTS

The state should make the following data publicly available:

- The percentage of highly qualified teachers, disaggregated both by individual school and by teaching area;
- The ratio of new teachers (first and second year) to the full teaching staff, disaggregated by individual school, reported for the previous three years;
- The annual teacher absenteeism rate reported for the previous three years, disaggregated by individual school;
- The average teacher turnover rate for the previous three years, disaggregated by individual school and school district in the state, and further disaggregated by reasons that teachers leave.

The state should include measurable goals, timelines, or other benchmarks to evaluate the success of strategies aimed at improving the equitable distribution of qualified teachers.

RATIONALE

- See appendix for detailed rationale.
- States need to report data at the level of the individual school.
- Experience matters a lot at first, but quickly fades in importance.
- Sweeping policy changes may be needed.
- Teacher compensation is a critical carrot.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

**Area 1: Goal A – New Mexico Analysis**

**State Meets a Small Part of Goal**

**ANALYSIS**

Comprehensive reporting may be the state’s most important role for ensuring the equitable distribution of teachers among schools. New Mexico currently collects and reports on some of the data recommended by NCTQ. The state does not publicly report on teacher absenteeism, turnover rates, or the ratio of new teachers to the full teaching staff, but it does report on the percentage of highly qualified teachers by school and by teaching area and disaggregates these data in several ways to determine where inequities exist.

In its revised Equity Plan submitted to the U.S. Department of Education, New Mexico reported on the current distribution of highly qualified teachers, noting that the state has made substantive progress since it identified in 2003-04 a baseline figure of 67.2 percent of classes taught by a highly qualified teacher. By 2005-06, that figure grew to 89.6 percent. When it comes to disaggregating data on highly qualified teachers, New Mexico conducts a thorough analysis of how such teachers are distributed among schools in the state. The state finds that non-highly qualified teachers are only slightly more likely to work in high-poverty schools on the secondary level (but not elementary). In terms of subject area, the state identified the fields of math, science and special education as those most likely to be taught by a non-highly qualified teacher. Although New Mexico currently collects data on teacher education and years of experience, it does not yet have the capacity to report on the percentage of novice teachers by school. However, the state outlined plans to update its data system to reflect this information.

- State initiatives play a limited role in remediying the systemic reasons for inequitable distribution of teachers. Nevertheless, state initiatives signal New Mexico’s concern for this issue and have some capacity to seed reform. New Mexico has proposed: –Supporting avenues for alternate route certification, such as Transition to Teaching; and

- Offering financial incentives, such as stipends for Native American teachers.

However, based on the information included in its Equity Plan, New Mexico appears to be a model for other states in establishing effective tools for monitoring districts and schools. First, the state uses its electronic data system to track districts’ progress in meeting key performance indicators, including the provision of highly qualified teachers. It then provides districts with both summary reports as well as individual teacher reports and establishes annual measurable objectives for the provision of highly qualified teachers at each school. Second, the state provides on-site monitoring visits that complement the data generated by the reports, which help it tailor its assistance even further.

**SUPPORTING RESEARCH**

RECOMMENDATION

New Mexico meets only a small part of this goal. New Mexico should consider expanding its data collection and reporting efforts to include teacher absenteeism, teacher experience and turnover rates, including the reasons why teachers leave their positions. These data will ensure that the state and its school districts have the necessary information available to understand and remedy staff stability and quality. Furthermore, providing comparative data for schools with similar poverty and minority populations would yield an even more comprehensive picture of gaps in equitable distribution.

The state should be commended for analyzing its data to examine inequitable distribution of highly qualified teachers and for putting in place mechanisms for monitoring schools’ and districts’ progress toward goals, establishing measurable benchmarks for its programs, and demonstrating a commitment to making its data transparent to the public.

NEW MEXICO RESPONSE

New Mexico was helpful in providing NCTQ with facts that enhanced our analysis.

LAST WORD

New Mexico, like many states, collects more data than it publicly reports. The state should consider making public, by school, critical information about teacher quality and stability by school.

Figure 2  Equitable Distribution

Does **NEW MEXICO** Publicly Report School-Level Data about Teachers?¹

<table>
<thead>
<tr>
<th>Data Point</th>
<th>Credit</th>

</tr>
</tbody>
</table>

¹ States that collect this information but do not publicly report it were not given credit. States that report on these factors only by district were also not given credit.
² States reporting at the school level on teachers’ average years of experience were not given credit, as this fails to capture what percent of the staff is new and just learning to be a teacher.
³ States were given credit for reporting publicly at the school level on either the percent of highly qualified teachers or the more preferred percent of classes taught by highly qualified teachers.
**BEST PRACTICE**

No state has a perfect record when it comes to public reporting of teacher data and well-designed policies to ameliorate inequities in teacher quality, but Connecticut comes close. Connecticut’s public reporting is the best among the states. Connecticut publishes information by school on the percent of classes taught by highly qualified teachers, the percentage of inexperienced teachers, teachers’ attendance rates and annual turnover rates, although it does not yet collect teachers’ reasons for leaving. For all of these indicators, the state provides comparisons with schools that have similar proportions of poor and minority students.

When it comes to the states’ Equity Plans, few states have developed strategies aimed specifically at recruiting and retaining qualified teachers in high-needs classrooms. Ohio and Nevada are exceptions. Both states presented comprehensive Equity Plans that identified the gaps in teacher distribution among poor and minority children and presented targeted strategies for balancing teacher expertise, aligned with measurable benchmarks.

"The majority of my students come from backgrounds of poverty and disadvantage. Unfortunately, at my school the principal and assistant principal are new—their inexperience is coupled with an extremely high teacher turnover rate, making any sort of lasting reform virtually impossible.”

- Megan Sembera, Teacher

---

*Figure 3  Equitable Distribution of Teachers  How Many States Publicly Report School-Level Data about Teachers?*

12

45*

5

5

* Including New Mexico.

1 States that collect this information but do not publicly report it were not given credit. States that report on these factors only by district were also not given credit.

2 States reporting at the school level on teachers’ average years of experience were not given credit, as this fails to capture what percent of the staff is new and just learning to be a teacher.

3 States were given credit for reporting publicly at the school level on either the percent of highly qualified teachers or the more preferred percent of classes taught by highly qualified teachers.
Area 1: Goal B – Elementary Teacher Preparation

The state should ensure that its teacher preparation programs provide elementary teacher candidates with a broad liberal arts education.

GOAL COMPONENTS

The state should require that its approved teacher preparation programs deliver a comprehensive program of study in broad liberal arts coursework. An adequate curriculum is likely to require approximately 42 credit hours to ensure appropriate depth in each of the five core subject areas (science, mathematics, social studies, English and fine arts). An appropriate elementary teacher preparation program should look something like the following:

- 3 credit hours (or standards to justify) of a survey of American literature;
- 3 credit hours (or standards to justify) of a survey of British and/or world literature;
- 3 credit hours (or standards to justify) of the technical aspects of good writing and grammar;
- 6 credit hours (or standards to justify) of general science, covering basic topics in earth science, biology, physics, and chemistry;
- 6 credit hours (or standards to justify) of mathematics covering foundational topics (e.g., fractions), algebra, and geometry;
- 6 credit hours (or standards to justify) of a survey of U.S. history;
- 6 credit hours (or standards to justify) of a survey of world history, including ancient history;
- 3 credit hours (or standards to justify) of world geography;
- 3 credit hours (or standards to justify) of a survey of music appreciation; and
- 3 credit hours (or standards to justify) of a survey of art history.

These courses that elementary teacher candidates need in liberal arts content would likely fulfill most institutions’ general education requirements, allowing candidates sufficient time to devote to pedagogy coursework, electives, and—if they chose—an additional content specialization.

This coursework should be directly relevant to the broad subject areas typically taught in the elementary grades and/or delineated in state standards (see “Best Practices” for examples).
Arts and sciences faculty, not education faculty, should teach this coursework.

The state should allow elementary teacher candidates to test out of specific coursework requirements, provided the test that is administered is specific to only one particular subject area.

**RATIONALE**

- See appendix for detailed rationale.

- Elementary teachers need coursework that is relevant to the PK through 6 classroom.

- Subject area coursework should be taught by arts and sciences faculty.

- Standards-based programs can work when verified by testing.

- Teacher candidates need to be able to ‘test out’ of coursework requirements.

- Mere alignment with student learning standards is not sufficient.

**SUPPORTING RESEARCH**

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 1: Goal B – New Mexico Analysis

State Partly Meets Goal

ANALYSIS

New Mexico’s subject-matter preparation requirements for elementary teacher candidates are stronger than those of most states.

NCTQ examined four different ways that New Mexico might ensure that elementary teacher candidates have adequate subject-matter knowledge across subject areas:

1. General Education Requirements
   - New Mexico has more demanding general education requirements than any other state. Teacher candidates must complete 54 credit hours in the following coursework: 12 credit hours in English;
   - 12 credit hours in history including American history and Western civilization;
   - 6 credit hours in mathematics;
   - 6 credit hours in government, economics, or sociology;
   - 12 credit hours in science, including biology, chemistry, physics, geology, zoology, or botany;
   - 6 credit hours in fine arts.

2. Coursework Requirements for all Elementary Candidates
   Elementary teacher candidates in New Mexico must also complete an additional 24 to 36 credit hours of coursework in a specific teaching field. The requirement of extensive subject-area and general coursework, while commendable for its breadth, probably exceeds the academic demands of elementary teaching and may dissuade talented prospects.

3. Standards for Programs to Apply in Preparing Elementary Candidates
   New Mexico does not have standards that its approved teacher preparation programs must use to frame instruction in elementary content.

4. Testing Requirements
   In New Mexico, all new elementary teachers must pass a general subject-matter test, New Mexico’s own NMTA series of assessments. While this test puts the state in technical compliance with NCLB’s requirements that all elementary teachers take a test of broad subject matter, it does not report teacher performance in each subject area, meaning that it is possible to pass the test and still fail some subject areas.

SUPPORTING RESEARCH

NMAC 6.61.2
RECOMMENDATION

New Mexico meets this goal in part. The state has better and more extensive requirements for elementary teacher candidates than most states. However, there are gaps in essential areas such as American literature, geometry, ancient world history, earth and life sciences.

New Mexico should also consider eliminating its requirement that elementary teacher candidates also complete an additional specialization in a particular teaching field.

Working with its teacher preparation programs, New Mexico could use its licensing test to attract individuals with strong academic backgrounds into teaching. A test that reports subscores could be administered to teacher candidates when they enter a program. This gives these candidates the opportunity to test out of core coursework requirements that they do not really need, and frees them up for electives.

NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis. The state added that it was not planning on lowering state standards in elementary education or any other area.

LAST WORD

TQ appreciates New Mexico’s position. In requiring extensive arts and sciences coursework, including study of U.S. history and Western civilization, New Mexico has demonstrated its commitment to preparing broadly educated elementary teachers. More specific coursework requirements, however, could help the state improve these requirements. For example, New Mexico’s blanket requirement of mathematics, for example, offers no guarantee that elementary teacher candidates will study algebra, geometry and foundations of mathematics.

Moreover, we reaffirm our contention that an academic major, while certainly not a bad thing, may be unnecessary for a state to require. The state’s role should be to set the minimum expectations for elementary teachers. With regard to subject-matter knowledge, future elementary teachers need to be prepared, first and foremost, to teach a range of topics. Academic specialization is not a requisite to the job of teaching elementary students.
BEST PRACTICE

Massachusetts requires elementary teacher candidates to complete 36 credit hours of arts and sciences coursework in the following areas:

- Composition;
- American literature;
- World literature, including British literature;
- U.S. history from colonial times to the present;
- World history, including European history, from ancient times to the present;
- Geography;
- Economics;
- U.S. government including founding documents;
- Child development;
- Science laboratory work; and
- Appropriate math and science coursework.

In addition, the Core Knowledge Foundation has articulated an excellent list of the subject-matter courses that elementary teacher candidates should complete (http://www.coreknowledge.org/CK/resrcs/syllabus.htm).

* Including NEW MEXICO.
Area 1: Goal C – Secondary Teacher Preparation

The state should require its teacher preparation programs to graduate secondary teachers who are highly qualified.

GOAL COMPONENTS

- Teacher preparation programs should require high school candidates to earn a major in their intended teaching area.
- The state should encourage middle school candidates to earn two minors in two core academic areas, preferably over the choice of a single major.
- The state should require that new middle school teachers pass a test in every core academic area they intend to teach.
- The state should require that new high school teachers pass a subject matter test.

RATIONALE

- See appendix for detailed rationale.
- Approved programs should require high school teacher candidates to earn a subject area major in their intended teaching area.
- Approved programs should prepare middle school teacher candidates to be qualified to teach two subject areas.
- Subject area coursework should be taught by arts and sciences faculty.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 1: Goal C – New Mexico Analysis

State Partly Meets Goal

ANALYSIS

New Mexico’s subject matter preparation requirements for secondary teacher candidates could be improved.

Middle school teacher candidates must complete 24 or more credit hours in at least one subject matter area.

High school teachers must complete 24-36 credit hours in a subject matter area.

All new secondary teachers in New Mexico are also required to pass a subject matter test, the NMTA, in order to attain licensure.

Unfortunately, the state still allows K-8 generalist teachers to teach grades seven and eight. These teachers are required to be “highly qualified” in each core area they teach, but the state does not require that they pass a test in each subject they teach.

SUPPORTING RESEARCH

NMAC 6.61.3, 6.61.4

RECOMMENDATION

New Mexico meets this goal in part. The state should consider explicitly requiring that high school teacher candidates complete a subject-area major of 30 credit hours, as well as giving middle school teacher candidates the option of completing two 15-credit subject matter minors and passing tests in both, thereby becoming highly qualified in two subject areas.

New Mexico should also draw clear lines between elementary and middle school preparation and accordingly adopt middle school teacher preparation policies, requiring two minors and tests, which will ensure that students in grades seven and eight have teachers who are more deeply prepared in content than elementary generalist teachers.

NEW MEXICO RESPONSE

New Mexico reported that pending regulatory changes would explicitly require high school teacher candidates to complete a major of 30 credit hours.

LAST WORD

This is a sensible policy change for New Mexico to make, but we stand by our contention that the state would be well served by a policy allowing middle school teacher candidates to complete two minors.
“It’s more than extremely difficult—it’s almost impossible to find teachers who are HQT in two content areas. As a pre-k through grade 8 school, we still only have one homeroom class in each grade of sixth, seventh, and eighth. So sometimes teachers have to teach two content areas, but are only certified in one. And we have to provide support at the school level to that teacher.”

- Sharon VanDyke, Principal

There are only a few states that meet all of NCTQ’s recommendations for both middle and high school teacher candidates. Connecticut, in particular, combines rigor with flexibility, requiring middle school teachers to complete either a subject-matter major or an interdisciplinary major consisting of 24 credit hours in one subject and 15 in another. Georgia, Louisiana and Mississippi also require two minors of middle school teacher candidates and a major for high school teacher candidates.

With the advent of NCLB, most states now require a subject-matter major for high school teacher candidates.
Area 1: Goal D – Veteran Teachers Path to HQT

For most teachers, the state should phase out its alternative “HOUSSE” route to becoming highly qualified.

GOAL COMPONENTS

By the end of the 2007 school year, states should significantly limit veteran teachers’ ability to use their High Objective Uniform State System of Evaluation (HOUSSE) routes to achieve “highly qualified teacher” status.

States still need to provide a HOUSSE route for a limited number of teachers: rural teachers of multiple subjects (both new and veteran), foreign teachers in the United States on a temporary basis, and secondary special education teachers (both new and veteran).

RATIONALE

- See appendix for detailed rationale.
- NCLB’s “HOUSSE” route is problematic.
- HOUSSE plans need to be phased out.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 1: Goal D – New Mexico Analysis

STATE MEETS GOAL

ANALYSIS
In a recent report to the U.S. Department of Education, New Mexico stated that all teachers hired prior to the end of the 2005-2006 school year must complete their use of the HOUSSE option by June 30, 2007. Thereafter, HOUSSE will be used for only two groups of teachers: rural secondary teachers who are teaching multiple subjects and are already highly qualified in one subject area and special education teachers teaching multiple subjects who are already highly qualified in one of the core areas specified in the Individuals with Disabilities Education Act (IDEA) 2004.

SUPPORTING RESEARCH

RECOMMENDATION
New Mexico meets this goal. The state is commended for having a sensible timeframe for phasing out the use of HOUSSE.

NEW MEXICO RESPONSE
New Mexico added that the state has conducted HOUSSE trainings and alerted districts to the new timeline for making use of the HOUSSE route. The state also noted that it is “putting in place a system for addressing the highly qualified issues with Special Education teachers.”

LAST WORD
The state’s focus on communication about HOUSSE is commendable and should help facilitate its discontinuation. In developing a system to address issues relating to highly qualified status and special education teachers, NCTQ encourages the state to consider the recommendations made in Goal 6-C.
BEST PRACTICE

A number of states have phased out HOUSSE in an extremely efficient manner, including Alabama, Arizona, Florida, Louisiana, Maine, Minnesota and Wyoming. These states have already completed the use of HOUSSE for veteran teachers (having done so prior to the start of the 2006-2007 school year), and implemented a revised system that only allows extensions of the process for teachers who fall under the exact exceptions identified by the U.S. Department of Education: rural secondary teachers who are teaching multiple subjects and are already highly qualified in one subject area; special education teachers teaching multiple subjects who are already highly qualified in one of the core areas specified in IDEA 2004; and teachers from other countries teaching in the United States on a temporary basis.
Area 1: Goal E – Standardizing Credentials

The state should adopt the national standard defining the amount of coursework necessary to earn a major or minor.

**GOAL COMPONENTS**

- A major should be defined as 30 credit hours.
- A minor should be defined as 15 credit hours.

**RATIONALE**

- See appendix for detailed rationale.
- Different definitions of a major and minor pose a burden on teachers.
- The job of the state is to set the minimum standard, not the optimum.
- Multi-subject majors may be an exception.

**SUPPORTING RESEARCH**

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 1: Goal E – New Mexico Analysis

○ State Does Not Meet Goal

**ANALYSIS**
New Mexico does not explicitly define the number of credit hours necessary for completion of a subject-area major or minor.

**SUPPORTING RESEARCH**
New Mexico does not meet this goal. The state should consider strengthening its policies by explicitly defining a subject-area major as 30 credit hours and a subject-area minor as 15 credit hours.

**RECOMMENDATION**
New Mexico does not meet this goal. The state should consider strengthening its policies by explicitly defining a subject-area major as 30 credit hours and a subject-area minor as 15 credit hours.

**NEW MEXICO RESPONSE**
New Mexico recognized the factual accuracy of our analysis, and added that the state is currently considering a policy that would define a subject-area major as 30 credit hours and a subject-area minor as 24 credit hours.

**LAST WORD**
New Mexico should adopt this definition of a major, but its proposed definition of a minor is excessive.

---

**Figure 12 Standardizing Credentials**

Area 2: Goal A – Defining Professional Knowledge

Through teaching standards, the state should articulate and assess the professional knowledge of teaching and learning that new teachers need, but steer clear of “soft” areas that are hard to measure.

GOAL COMPONENTS

- Standards should describe knowledge that is grounded in science and consensus thinking about effective teaching, while avoiding overt ideological statements and descriptions of teachers’ “soft” attributes that cannot be tested.
- Standards should address the needs of the novice teacher, describing the state’s expectations of what a new teacher needs to know before starting to teach.
- Standards should be specific enough to drive the instruction of teacher preparation programs and inform teacher candidates of what they need to know in order to become licensed teachers.
- The state should verify that new teachers meet its professional standards by means of a licensing test, leaving observations and performance assessments to schools.
- All standards should be found in one document, clearly posted on the state’s website, easily accessible to both teacher preparation programs and new teachers.

RATIONALE

- See appendix for detailed rationale.
- Standards need to be grounded in science and proven practices.
- Standards need to address expectations for the novice teacher.
- Teacher dispositions are hard to assess.
- Standards need to be specific to be useful.
- A good test puts teeth in standards.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Alaska, Georgia, Indiana, New Hampshire, Wisconsin, Wyoming
Area 2: Goal A – New Mexico Analysis

State Meets a Small Part of Goal

ANALYSIS

New Mexico does not have teaching standards that clearly refer to new teachers or that are specific enough to form the basis of an entry-level test. New Mexico’s standards refer mainly to classroom-based application, which can only be assessed through direct observation and is thus impractical for state-level oversight.

The professional knowledge that New Mexico expects of entry-level teachers is not outlined with nearly enough specificity or depth. This is evident from New Mexico’s expectation that teachers possess knowledge of “the principles of student growth, development and learning” without citing the specific areas of growth and development that the state holds as required knowledge and without citing the related theories that the state views as valid. Only by adding specificity to these references can knowledge requirements for new teachers be successfully standardized. This type of standardization is critical in guiding teacher preparation programs and better ensuring the competence of teaching candidates.

The need for specificity is also illustrated in New Mexico’s assessment standard which cites the ability to use “a variety of assessment tools and strategies, as appropriate” without including elaboration as to the specific knowledge requirements that the state holds for new teachers in relation to assessment. The addition of such specificity would also greatly improve the testability of this standard.

New Mexico’s standards focus more on the teacher’s ability to encourage students (e.g., the teacher “Demonstrates sensitivity and responsiveness to the personal ideas, needs, interests and feelings of students”), rather than focusing on the concrete knowledge that teachers must have. New Mexico has also failed to standardize some critical basics, such as required knowledge of state education laws and professional ethics. Similarly, New Mexico’s standards do not address ESL methods, abuse recognition, or intervention methods.

Specifics relating to even the most basic aspects of professional competence should be more clearly articulated. New Mexico’s standards lack point-by-point reference to the elements the state views as require knowledge across all endorsement types in areas such as child and adolescent development, knowledge of reading skills and how language is acquired, and specific aspects of curricular planning, classroom management and required technology based skills.

New Mexico requires new teachers to pass a pedagogy test from its own New Mexico Teacher Assessments (NMTA) series.

RECOMMENDATION

New Mexico meets only a small part of this goal. New Mexico should revise its standards to exclude all untestable and emotionally driven statements and to more clearly address the requirements for new teachers. These standards should include more research citations (book, article and theory references) to help guide teacher preparation programs and better act as a compendium of the knowledge that the state views as vital for all teachers.

New Mexico should also verify that the current test of pedagogy ensures that new teachers enter classrooms with the requisite knowledge and skills.
NEW MEXICO RESPONSE

New Mexico indicated that its evaluation system requires the same competencies of all teachers, while recognizing the different “attainment levels” of new and experienced teachers through a three-tiered licensure system, modeled after the National Board Certification process.

LAST WORD

While recognizing the existence of different competency levels is commendable, it remains for New Mexico to clearly identify the foundational knowledge that extends across all endorsement types and that marks a minimum standard for entry-level teacher competence. Without clearly identifying basic, testable knowledge and skill requirements, the state’s standards cannot successfully identify the foundation from which teachers progress to higher levels of competence.
**BEST PRACTICE**

New York does not have a single set of standards for all new teachers, but the state’s framework for its teacher certification tests of professional knowledge serve the same purpose. The state clearly delineates its expectations for the specific professional knowledge new teachers must have. The specificity and testability of New York’s standards and their clear connection to the kind of knowledge likely to be related to teacher effectiveness make them an excellent example for other states.

Colorado’s standards earn a best practice designation as well, as they focus on the practical aspects of teaching and include the type of specificity that facilitates testing as a means to verify that entry-level teachers meet these standardized requirements.

Texas’ clear and specific standards are also among the best in the country. Each standard includes the subheadings “What teachers know” and “What teachers can do,” which provide meaningful guidance to teacher candidates and teacher preparation programs and allow these standards to easily form the basis of an entry-level test. The standards are written in excellent detail.

While not state standards, the professional teaching standards of the American Board for Certification of Teacher Excellence offer another example of thoughtful, precise teaching standards focused on teacher effectiveness. The third topic in these standards is “Provides Clear and Focused Instruction” which is as far as most state standards go in terms of specificity. ABCTE, however, breaks this general statement down into subtopics, knowledge of which is assessed by well-designed test questions. A few examples of the subtopics ABCTE identifies for providing clear and focused instruction include:

- Teaches vocabulary required for mastery of the subject matter;
- Identifies mistake patterns or knowledge gaps in student responses;
- Systematically reduces or withdraws assistance as students become proficient; and
- Utilizes metaphors and analogies to communicate key ideas.

Area 2: Goal B – Meaningful Licenses

The state should require that all teachers pass required licensing tests before they begin their second year of teaching.

GOAL COMPONENTS

States that confer conditional, provisional, or sometimes even standard licenses on teachers who have not passed the required licensing tests should eliminate their generous waiver policies after one year.

RATIONALE

See appendix for detailed rationale.

The title of “Teacher” should signify an accomplishment.

SUPPORTING RESEARCH

Research citations to support this goal are available at www.nctq.org/stpy/citations.

1 State only requires elementary teachers to pass licensure tests.
Area 2: Goal B – New Mexico Analysis

State Meets Goal

ANALYSIS
According to current New Mexico policy, only teachers who have met all state requirements may teach in core academic areas. The state allows teachers in other areas to teach under waivers under certain circumstances. Although the state should make an effort to ensure that all of its teachers pass their licensing tests prior to entering the classroom, New Mexico is commended for this policy, which is better than that of most states.

RECOMMENDATION
New Mexico meets this goal. The state may want to consider requiring that all teachers who have not passed state licensing tests are categorized as long-term substitutes, interns, or instructors.

NEW MEXICO RESPONSE
New Mexico recognized the factual accuracy of our analysis.
Food for Thought
Distinguishing teachers who have not passed licensing tests from fully certified teachers.
► See appendix for entire food for thought.

Figure 18  Meaningful Licenses
How Long can New Teachers Practice without Passing Licensing Tests?

![Bar chart showing the distribution of new teachers practicing without passing licensing tests.

- NEW MEXICO
  - No deferral: 3
  - 1 year: 19
  - 2 years: 7
  - 3 years + (or unspecified): 20

Montana and Nebraska do not currently require licensing tests.

BEST PRACTICE
Several states meet this goal. Connecticut and Massachusetts deserve special attention for their more restrictive policies regarding licensure tests. These states restrict the use of one-year testing waivers to transferring and charter school teachers.

“We have teachers who have master’s degrees (that we even provide tuition support to help them get!) who cannot pass a basic skills test. These tests assess middle school level skills. This begs two questions: How do they get that far? What does this say about the quality of a college education?”

- Gary Thrift, District Director of Human Resources

Montana and Nebraska do not currently require licensing tests.
Area 2: Goal C – Interstate Portability

The state should help to make teacher licenses fully portable among states—with appropriate safeguards.

GOAL COMPONENTS

- The state should not use transcript analysis, a method that offers little insight into a teacher’s effectiveness, as a means of judging the eligibility of a certified teacher moving from another state. The state can, and should, require evidence of good standing in previous employment, such as letters of reference, current certification status, student achievement data, and/or copies of teacher evaluations.

- The state should uphold its standards for all teachers by insisting that teachers meet its testing requirements.

RATIONALE

- See appendix for detailed rationale.
- Using transcript analysis to judge teacher competency provides little value.
- Testing requirements should be upheld, not waived.
- Signing on to the NASDTEC Interstate Contract at least signals a willingness to consider portability.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 2: Goal C – New Mexico Analysis

State Meets a Small Part of Goal

ANALYSIS

New Mexico has needlessly restrictive policies for granting licensure to traditionally prepared, licensed teachers who wish to transfer from other states. The state routinely reviews the college transcripts of licensed out-of-state teachers, an exercise that often leads the state to require additional coursework before it will offer an equivalent license. A survey of district personnel officers confirmed that school districts do, in fact, have trouble hiring out-of-state teachers without the state imposing additional coursework requirements. States that reach a determination about an applicant’s licensure status on the basis of the course titles listed on the applicant’s transcript may end up mistakenly equating the amount of required coursework with the qualifications of the teachers produced.

Conversely, New Mexico takes considerable risk by granting a waiver for its licensing tests to any out-of-state teacher who has passed a test in a previous state, regardless of whether or not they have met standards comparable to New Mexico’s passing scores on its own tests.

Finally, New Mexico has indicated its willingness to support the portability of teacher licenses by having signed a national agreement known as the NASDTEC Interstate Agreement. While signing this agreement does not ensure that a state will provide unconditional reciprocity, it is, at the very least, symbolically important.

RECOMMENDATION

New Mexico meets only a small part of this goal. The state should consider adopting a more flexible policy, similar to what is found in other professions, in which teachers would be required to have completed an approved program in another state and meet New Mexico’s testing standards. Transcript reviews, which involve a state official comparing course titles from the applicant’s transcript with New Mexico’s expectations, are not a particularly meaningful exercise. A licensing test of sufficient rigor can satisfy the state’s goals more accurately and efficiently.

New Mexico should not provide any waivers of its teacher tests unless an applicant can provide evidence of a passing score under its own standards. The negative impact on student learning stemming from a teacher’s inadequate subject matter knowledge is not mitigated by the fact that the teacher has more experience.

NEW MEXICO RESPONSE

New Mexico was helpful in providing NCTQ with facts that enhanced our analysis. The state added that it is working to revise its reciprocity policies to make them more consistent and flexible, as well as to eliminate transcript reviews of licensed teachers.

LAST WORD

New Mexico is commended for working to make its policies in this area more flexible.
**Figure 20  Interstate Portability**

Does the state offer reciprocity without a lot of strings attached?

Does the state require all teachers to pass its licensing tests?
Area 2: Goal D – Teacher Prep in Reading Instruction

The state should ensure that new teachers know the science of reading instruction.

GOAL COMPONENTS

☒ To ensure that teacher preparation programs adequately prepare candidates in the science of reading, the state should require that these programs train teachers in the five instructional components proven by scientifically based reading research to be essential to teaching children to read.

☒ The most flexible and effective way of achieving this crucial goal is by requiring that new teachers pass a rigorous test of reading instruction in order to attain licensure. Most current tests of pedagogy and reading instruction allow teachers to pass without knowing the science of reading instruction. If a state elects to test knowledge of reading instruction on the general test of pedagogy or elementary content, it should require that the testing company report a subscore clearly revealing the candidates’ knowledge in the science of reading. Elementary teachers who do not possess the minimum knowledge needed should not be eligible for a teaching license.

RATIONALE

► See appendix for detailed rationale.

► Reading instruction should address five essential components.

► Most current reading tests do not offer assurance of teacher knowledge.

SUPPORTING RESEARCH

► Research citations to support this goal are available at www.nctq.org/stpy/citations.

State Does Not Meet Goal
28
Area 2: Goal D – New Mexico Analysis

ANALYSIS

New Mexico’s reading standards do not reflect the components of reading instruction proven by scientifically based reading research to be essential to teaching children to read. The science of reading is critical to addressing the nation’s sense of urgency to reduce the large numbers of children who are not proficient readers, due in large part to teachers who lack the required knowledge and skills to deliver effective reading instruction. New Mexico requires all new teachers to take coursework in the teaching of reading. Elementary teachers must complete at least six credit hours, and middle and high school teachers must complete at least three credit hours. However, it is not explicitly stated that this coursework must include study of the five essential components of reading instruction.

As demonstrated in NCTQ’s recent study, “What Elementary Schools Aren’t Teaching About Reading and What Elementary Teachers Aren’t Learning,” New Mexico’s current regulations do not guarantee that teacher preparation programs are teaching the science of reading. The New Mexico university in this study was not found to provide adequate training to teachers in the five components of reading instruction.

The state does not require a separate reading assessment measuring a candidate’s knowledge of scientifically based reading instruction.

RECOMMENDATION

New Mexico does not meet this goal. New Mexico should consider adopting more specific standards that reflect the science described in the National Reading Panel’s 2000 report “Teaching Children to Read.” The state should also consider requiring its teachers to pass a reading instruction assessment. A good reading assessment assures the state and the public that teacher preparation programs are delivering proper training in reading instruction. It also provides candidates who have acquired the necessary skills elsewhere with a “test out” option.

NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis. The state also noted that institutions of higher education meet state requirements, which “are based on competencies that are scientifically based”, and have been reviewed and approved by the Public Education Department.

LAST WORD

The state should require teacher preparation programs to provide training to teachers in the science of reading, and an assessment should be used to ensure that teacher candidates have mastered these critical skills. Without these requirements, the state risks sending unprepared teachers who lack the knowledge to effectively teach children to read into elementary classrooms.
“As a graduate from the most highly recommended teacher prep university in the Midwest, I graduated with high honors. Sadly though, I was not prepared to teach children, especially not prepared to teach children how to read. I discovered that there was a clear and compelling scientific research base about how children learn to read—which my teacher prep program did not address.”
- Amy Jo Leonard, Teacher

**BEST PRACTICE**

Virginia and Massachusetts have some of the strongest policies for teacher preparation in reading instruction in the country. Virginia requires all teacher candidates—including middle and secondary teachers—to complete reading coursework that focuses on the science of reading, and requires pre-kindergarten, elementary and special education teacher candidates to pass a reading exam. Massachusetts has standards that clearly address the science of reading, and requires early childhood, elementary and some special education teachers to pass a reading exam. Recent reviews have rated Virginia and Massachusetts’ tests as among a very small number that actually verify teacher candidates’ knowledge of the science of reading.

http://www.rften.org/content/Rigden_Report_9_7_06.pdf

**Figure 23** Teacher Prep in Reading Instruction

*How Many States Address the Science of Reading?*

- States that do not address reading science
- States with requirements that partially address reading science
- States with requirements that address reading science

**NEW MEXICO**

- 40 States have no reading test
- 32 including New Mexico
- 6 States have stand-alone reading test
- 7 States have inadequate reading test

**Figure 24** Teacher Prep in Reading Instruction

*How Many States Measure New Teachers’ Knowledge of the Science of Reading?*
Area 2: Goal E – Distinguishing Promising Teachers

The state license should distinguish promising new teachers.

GOAL COMPONENTS

States should officially recognize new teachers who are of superior academic caliber.

RATIONALE

- See appendix for detailed rationale.
- A teacher’s own academic ability matters.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 2: Goal E – New Mexico Analysis

- State Does Not Meet Goal

**ANALYSIS**
New Mexico does not recognize distinct levels of academic caliber for newly certified teachers.

**RECOMMENDATION**
New Mexico does not meet this goal. The state should consider recognizing distinct levels of academic caliber at the time of initial certification.

**NEW MEXICO RESPONSE**
New Mexico recognized the factual accuracy of our analysis. It emphasized that the state’s three-tiered licensure system is intended to distinguish Level I (beginning) teachers from teachers at Levels II and III, and that progress from Level I requires them to meet state competencies.

**LAST WORD**
New Mexico’s point is well taken, but the state may also want to identify promising new teachers.
BEST PRACTICE

Delaware, the District of Columbia, Maryland and Virginia all offer the Meritorious New Teacher Candidate credential to new teachers with strong academic backgrounds. MNTC holders must score in the upper quartile on state licensing tests and achieve a 3.5 GPA in their undergraduate teacher preparation (or, for secondary teachers, in the content major). They must also score in the upper quartile of the verbal portion of the SAT, ACT or GRE.

Figure 26  Distinguishing Promising Teachers

Do States Recognize Academic Caliber on the Initial License?

“- Ariela Rozman,
Teacher Recruitment Program Administrator

“- The system is not set up to attract and embrace the most talented teachers. We need to knock down the barriers to make sure that can happen.”
Area 3: Goal A – Evaluating Teacher Effectiveness

The state should require instructional effectiveness to be the *preponderant* criterion of any teacher evaluation.

GOAL COMPONENTS

- Evaluation instruments should be structured so as to make it impossible for a teacher to receive a satisfactory rating if found ineffective in the classroom. States that choose not to require a common evaluation instrument should still formally endorse the important principle that student learning should be the preponderant consideration in local evaluation processes.

- Evaluation instruments should include classroom observations that focus on and document effectiveness of instruction.

- Apart from observations, teacher evaluations should consider objective evidence of student learning, including the value a teacher adds not only as measured by standardized test scores, but also by other classroom-based artifacts, such as tests, quizzes, and student work.

RATIONALE

- See appendix for detailed rationale.

- Teachers should be judged primarily by their impact on students.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 3: Goal A – New Mexico Analysis

State Partly Meets Goal

ANALYSIS

New Mexico requires districts to use a uniform teacher evaluation model, produced by the state. The teacher evaluation instrument is a performance-based model, judging teacher performance on nine competencies, divided among three strands: instruction, student learning and professional learning. Classroom observations are required alongside other data sources, such as student work portfolios, student achievement data and reflective journals to document teachers’ mastery of the nine competencies. Although the nine competencies are focused on evaluating teacher behaviors and they also include some limited evidence of teachers’ impact on student learning, the evaluation criteria do not direct districts to base teacher evaluations on a preponderance of evidence of student learning.

SUPPORTING RESEARCH

NMAC 6.69.4.11 (D-E); Guidelines for the New Mexico Annual Teacher Performance Evaluation: http://www.teachnm.org/annual_eval_guidelines.html

RECOMMENDATION

New Mexico meets this goal in part. New Mexico is commended for including multiple measures of student learning in its teacher evaluations. However, the state should consider revising its guidelines to insist that districts use evidence of student learning garnered both through subjective and objective measures, such as standardized test results, as the preponderant criterion of a teacher evaluation.

NEW MEXICO RESPONSE

New Mexico was helpful in providing NCTQ with facts that enhanced our analysis. New Mexico also provided information about its Three-Tiered Licensure System indicating teachers must demonstrate a positive impact on student performance as demonstrated by objective assessments in order to move to the next licensure tier.

LAST WORD

NCTQ sees this as important information to be included in the licensure process, however, the state’s annual evaluation criteria should be equally comprehensive in its expectation that teachers cannot earn a positive rating without demonstrating an impact on student learning.

#### BEST PRACTICE

**Florida** is the only state that explicitly requires teacher evaluations to be based primarily on evidence of student learning. The state requires evaluations to rely on classroom observations as well as objective measures of student achievement, including state assessment data. Moreover, Florida specifically states that evaluations should be based on a preponderance of evidence of student learning. **South Carolina, Tennessee, and Texas** also structure their formal evaluations so that teachers cannot get an overall satisfactory rating unless they also get a satisfactory rating on each of the evaluation domains, including those directly related to classroom effectiveness.

Two national programs, Teach For America and the Teacher Advancement Program are also worth noting for the high expectations they set for participating teachers.

Teach For America, which places teachers in some of the hardest-to-serve classrooms in the nation, sets high expectations for its teachers:

- One-and-a-half years’ growth in math and reading in one school year (this generally only applies to elementary) or two years’ growth in either math or reading in one school year (elementary or secondary); and/or
- 80-percent mastery of state student learning standards—as measured by teacher-chosen diagnostics (elementary or secondary).

These benchmarks (while not related to teachers’ employment status) send an important signal to teachers about what the organization values most.

The Teacher Advancement Program has a rigorous performance model for teachers based on:

- Multiple teacher evaluations by multiple evaluators that address instruction, designing and planning instruction, environment, and responsibilities; and
- Value-added student achievement gains (both school-wide and at the classroom level).

---

Footnotes for Figure 28

1 Significant guidance means the state requires districts to use a statewide comprehensive evaluation system (or to develop local evaluations that have all the components of the state system and meet state approval) OR the state provides significant regulatory guidance to districts about the content and process for teacher evaluations.

Minimal guidance means the state provides only general instruction about teacher evaluations.

2 N/A states do not require teacher evaluation.
### Food for Thought
Identifying good ways to assess teacher effectiveness.

**Footnotes for Figure 29**

1. Louisiana has an optional teacher evaluation system that does make explicit the need to include objective measures of student learning as part of the teacher evaluation.

2. Although Minnesota does not have policies regarding teacher evaluations, the state has implemented an optional teacher evaluation system based on evidence of student learning as measured by observations and objective measures, such as student achievement data.

3. For teachers participating in Utah’s career-ladder program, in which teachers earn incentives for taking on additional responsibilities, teacher evaluations must include evidence of student achievement gains.
Area 3: Goal B – Using Value-Added

The state should install strong value-added instruments to add to schools’ knowledge of teacher effectiveness.

GOAL COMPONENTS

The state should be the leading innovator in the development of value-added methodology.

Provided there are multiple years of data available, there are a number of meaningful purposes for which a state can help its schools to use this new methodology to obtain data about individual teachers:

- Identifying professional development needs;
- Evaluating teachers, provided other criteria are considered as well;
- Awarding individual bonuses, provided other criteria are considered as well; and
- Providing the objective data needed for dismissal of an ineffective teacher.

Value-added analysis is also useful at the school level before multiple years of data are available:

- Analyzing the overall effectiveness of a team of teachers or the entire school staff;
- Designing school-improvement plans;
- Awarding schoolwide bonuses.

Value-added systems can also be used to hold teacher preparation programs accountable. By linking individual teacher performance back to teacher preparation programs and aggregating the data for all program graduates, the state can learn which programs are producing the most effective teachers.

To lay the necessary groundwork for value-added analysis, the state needs to establish a student- and teacher-level longitudinal data system with, at the very least, three key components:

- A unique statewide student identifier number that connects student data across key databases across years;
- A unique teacher identifier system that can match individual teacher records with individual student records;
- An assessment system with the ability to match individual student test records from year to year to measure academic growth.

Footnotes for Figure 31

1 Data source: Data Quality Campaign, reported Fall 2006. www.dataqualitycampaign.org. State responses were reported by data directors from state education agencies in September 2006. Although the Data Quality Campaign lists ten essential elements for developing a strong, functional student-level longitudinal database, NCTQ is highlighting the three elements that most statisticians and economists agree are absolutely essential for developing value-added data analysis: 1) a unique statewide student identifier number that connects student data across key databases across years, 2) a unique teacher identifier system that can connect individual teacher records with student records, and 3) the ability to match individual student test records year to year to measure academic growth.

Area 3: Goal B – New Mexico Analysis

State Partly Meets Goal

ANALYSIS
New Mexico does not have a value-added assessment model that analyzes the effect of teachers on student achievement gains.

However, New Mexico has all three necessary elements that would allow for the development of a student- and teacher-level longitudinal data system. The state has assigned unique student identifiers that connect individual student data across key databases and a teacher identifier system that can match teacher records with student records. The state has also adopted a new assessment system that can match student test records from year to year so as to measure student academic growth.

SUPPORTING RESEARCH
Data Quality Campaign: www.dataqualitycampaign.org

RECOMMENDATION
New Mexico meets this goal in part. The capacity of the state’s data system is better than most states’ and offers a great deal of potential for the development of a value-added assessment model, a goal that New Mexico should consider pursuing in an effort to provide objective evidence of teacher effectiveness—which could be used in compensation reform—and to provide the school with critical student-learning data necessary for measuring and improving overall school performance.

NEW MEXICO RESPONSE
New Mexico recognized that it does not conduct value-added analysis, but also expressed satisfaction with its own new performance evaluation system.
BEST PRACTICE

Tennessee pioneered the first statewide value-added assessment (Tennessee Value-Added Assessment System) that analyzes and reports student achievement gains at the classroom level. Although value-added analysis is not included as an indicator on teacher evaluations in Tennessee, school districts do use the data to better target the professional development needs of teachers.

Food for Thought

Building state longitudinal data systems: laying the foundation for value-added methodology.

See appendix for entire food for thought.
Area 3: Goal C – Teacher Evaluation

The state should require that schools formally evaluate teachers on an annual basis.

GOAL COMPONENTS

☐ The state should require that all teachers receive a formal evaluation annually.

☐ The state should work with districts to encourage them to adopt a statewide standard, requiring all teachers who have received a single unsatisfactory evaluation to be placed on an improvement plan—no matter what their employment status may be.

☐ The state should work with districts to encourage them to adopt a statewide standard, requiring that all teachers who have received two unsatisfactory evaluations within five years be formally eligible for dismissal—no matter what their employment status may be.

RATIONALE

- See appendix for detailed rationale.

- Annual evaluations are standard practice in most professional jobs.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

State Does Not Meet Goal
22
Colorado, District of Columbia, Indiana, Kansas, Louisiana, Maine, Maryland, Massachusetts, Minnesota, Missouri, Montana, Nebraska, New Hampshire, Ohio, Oregon, Rhode Island, South Dakota, Tennessee, Utah, Vermont, West Virginia, Wisconsin
Area 3: Goal C – New Mexico Analysis

State Partly Meets Goal

ANALYSIS

New Mexico requires veteran teachers (Levels II and III) to receive a full, comprehensive evaluation every three years. During the intervening years, the state requires a more minimal assessment that includes a classroom observation as well as a review of the teacher's professional development plan.

Newer (Level I) teachers receive a full, comprehensive evaluation annually.

The state provides strong guidance on how a district must proceed regarding a teacher with an unsatisfactory evaluation. If a teacher fails to demonstrate competency on an evaluation, the district must provide additional professional development and peer intervention during the next school year. If that teacher again fails to demonstrate competency, the district may choose not to renew the contract.

RECOMMENDATION

New Mexico meets this goal in part. While New Mexico’s expectations for reviewing teachers in the years between formal evaluations are better than what many states require, the state still falls short of conducting a full, comprehensive evaluation annually. Teachers—even effective, experienced teachers—benefit from regular feedback based on a thorough evaluation.

The state is commended for requiring annual evaluations and for explicitly allowing the dismissal of teachers deemed incompetent.

NEW MEXICO RESPONSE

New Mexico was helpful in providing NCTQ with facts that enhanced our analysis.
**BEST PRACTICE**

Pennsylvania requires annual evaluations of all teachers and provides guidance to districts about the need to place teachers receiving unsatisfactory evaluations on probation. Furthermore, Pennsylvania requires that teachers who do not improve are formally eligible for dismissal.

---

- No: 37

NEW MEXICO
Area 3: Goal D – Compensation Reform

The state should encourage, not block, efforts at compensation reform.

GOAL COMPONENTS

- The state should not have a minimum salary schedule; it should only articulate the minimum starting salary that every teacher should be paid. Further, the state should not have regulatory language that would block differential pay.
- The state should encourage compensation reform by offering differential pay programs that tie teacher pay to district and school needs, such recruiting and retaining teachers in hard-to-staff subjects and schools.
- The state should experiment with performance pay efforts, rewarding teachers for their effectiveness in the classroom.

RATIONALE

- See appendix for detailed rationale.
- Reform can be accomplished within the context of local control.
- There is an important difference between setting the minimum teacher salary in a state and setting a salary schedule.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
- Goals with this icon are especially important for attracting science and mathematics teachers.
Area 3: Goal D – New Mexico Analysis

State Partly Meets Goal

ANALYSIS

New Mexico has a three-tiered licensure system with an accompanying minimum base salary for each tier. Aside from these minimum starting salaries, there is no state-mandated minimum salary schedule that designates salary increases for teacher degree level and years of experience. These increases are negotiated locally.

The state does not have regulatory language that directly blocks differential pay, yet, despite this flexibility, the state does not support differential pay and has not initiated a performance pay plan that would reward teachers for producing student achievement gains. Teachers certified by the National Board for Professional Teaching Standards receive an annual stipend established by a formula (for the year 2006, the stipend was $5,166).

SUPPORTING RESEARCH

Education Counts: http://www2.edweek.org/agentk-12/states/nm.html?state=NM
National Board for Professional Teaching Standards: http://www.nbpts.org/resources/state_local_information

RECOMMENDATION

New Mexico meets this goal in part. While the state does allow for local negotiation of teacher salaries, it also maintains a tiered salary system that aligns starting salary advances with successful completion of licensure requirements and not necessarily with the needs of the district itself. However, the state’s salary requirements are better than most as they still allow for some flexibility within each tier.

New Mexico should consider developing differential pay plans as a way to more closely link teacher compensation to district and school needs and to achieve greater equitable distribution of teachers among schools. The state should also consider initiating or encouraging development of performance pay plans that reward effective teachers.

NEW MEXICO RESPONSE

New Mexico was helpful in providing NCTQ with the facts necessary for our analysis.
BEST PRACTICE

Florida offers strong policies that encourage and protect compensation reform. The state has passed legislation that requires local districts to offer differential pay. Moreover, the state prohibits districts from approving collective bargaining agreements that preclude salary incentives.

Footnotes for Figure 36
1 NBPTS=National Board for Professional Teaching Standards
2 Figures based on teaching in a high-needs school.

“The quality of teaching is never recognized, good or bad. The most ineffective, careless teachers are paid just the same—and sometimes more than the most successful ones. Most schools just aren’t the sort of place that skilled and talented people want to work because those characteristics aren’t valued or rewarded.”

- Haily Korman, Teacher

NEW MEXICO STATE SUMMARY – AREA 3: GOAL D

STATE POLICY YEARBOOK 2007 : 55
Area 3: Goal E – Tenure

The state should not give teachers permanent status (tenure) until they have been teaching for five years.

GOAL COMPONENTS

The state’s probationary period should not end until a teacher has been in the classroom for five years.

RATIONALE

- See appendix for detailed rationale.
- Tenure should be a meaningful milestone in a teacher’s career.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 3: Goal E – New Mexico Analysis

State Meets a Small Part of Goal

**ANALYSIS**
New Mexico has a three-year probationary period for new teachers.

**RECOMMENDATION**
New Mexico meets only a small part of this goal. New Mexico should consider extending the minimum probationary period required for tenure to five years.

**NEW MEXICO RESPONSE**
New Mexico recognized the factual accuracy of its analysis.
**BEST PRACTICE**

Two states, Indiana and Missouri, currently have probationary periods of five years for new teachers.

**Figure 38 Tenure**

*How Long Before a Teacher Earns Tenure? State-by-State Breakout*
Area 4: Goal A – Entry Into Preparation Programs

The state should require undergraduate teacher preparation programs to administer a basic skills test as a criterion for admission.

GOAL COMPONENTS

☐ It is inappropriate to wait until teacher candidates are ready to apply for licensure to administer a basic skills test that assesses reading, writing, and mathematics.

☐ All approved programs in a state should use a common test to facilitate program comparison.

☐ The state, not teacher preparation programs, should set the score needed to pass this test.

☐ Programs should have the option of exempting candidates who submit comparable SAT/ACT scores at a level set by the state.

RATIONALE

► See appendix for detailed rationale.

■ The best time for assessing basic skills is at program entry.

■ Screening candidates at program entry protects the public’s investment.

SUPPORTING RESEARCH

► Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 4: Goal A – New Mexico Analysis

State Does Not Meet Goal

ANALYSIS
New Mexico does not require aspiring teachers to pass a basic skills test as a condition for admission into a teacher preparation program, instead delaying the requirement until candidates are ready to apply for licensure.

RECOMMENDATION
New Mexico does not meet this goal. The state should require that its approved teacher preparation programs only accept applicants who have first passed a basic skills test or demonstrated equivalent performance on a college entrance exam. Furthermore, the test, the minimum passing scores, and the equivalent college entrance exam scores should be determined by the state.

NEW MEXICO RESPONSE
New Mexico asserted that its teacher preparation programs require a passing score on a basic skills test.

LAST WORD
The notion that teacher preparation programs should have a certain amount of flexibility to decide who they can admit is good policy. However, basic skills testing is too critical to allow programs to establish their own requirements. Basic skills tests measure minimum competency, essentially those skills that a person should have acquired in middle school. Teacher preparation programs that do not sufficiently and appropriately screen candidates according to criteria established by the state end up investing considerable resources in individuals who may not be able to successfully complete the program and pass licensing tests. Public teacher preparation programs rely on considerable public funding to support their programs. Responsible spending of public funds begins with admitting only those aspiring teachers who can meet a set of minimum standards.
BEST PRACTICE

A number of states—Connecticut, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee and West Virginia—require candidates to pass a basic skills test as a condition for admission to a teacher preparation program. These states set a minimum passing score for the test. They also eliminate unnecessary testing by allowing candidates to opt out of the basic skills test by demonstrating a sufficiently high score on the SAT or ACT.

Food for Thought
Using testing to expand and restrict the supply of teachers.
See appendix for entire food for thought.

Figure 41 Entry Into Preparation Programs

When do States Test Basic Skills?

- Before admission to prep program: 17
- During or after completion of prep program: 24 including NEW MEXICO
- Does not require basic skills test: 10
Area 4: Goal B – Program Accountability

The state should base its approval of teacher preparation programs on measures that focus on the quality of the teachers coming out of the programs.

GOAL COMPONENTS

The most important currently available data for states to collect are candidates’ pass rates on state licensing tests, but more meaningful data on this variable need to be obtained. Rather than ask that programs report the pass rates of teachers graduating from the program, the state should ask programs to report the percentage of teacher candidates who entered student teaching and who were able to pass state licensing tests. Even more can be learned by asking the percentage of teachers who passed on first attempt versus multiple attempts.

In addition to better pass-rate information, states should consider collecting the following data, which comprise a more comprehensive index of program performance:

- Average raw scores of graduates on licensing tests (basic skills, subject matter, professional);
- Satisfaction ratings (by school principals and teacher supervisors) of programs’ student teachers, using a standardized form to permit program comparison;
- Evaluation results from first and/or second year of teaching and percentage of teachers eligible for tenure;
- Academic achievement gains of graduates’ students averaged over the first three years of teaching; and
- Five-year retention rate of graduates in the teaching profession.

The state should also establish the minimum standard of performance for each of these categories of data. Programs must be held accountable for meeting these standards and the state, after due process, should shut down programs that do not do so.

The state should produce an annual report card, published on the state’s website, that shows all of the data that the state collects on individual teacher preparation programs.

The state can also collect the following evidence as well, although it may be unwise to use them as accountability measures:

- The program limits admission to certification areas that produce too many teachers;

- State Does Not Meet Goal
  - 31
The program trains teachers in high-shortage areas; the number of candidates taking jobs in-state, out-of-state, or not entering the profession.

RATIONALE
- See appendix for detailed rationale.
- States need to hold programs accountable for the quality of their graduates.

SUPPORTING RESEARCH
- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Footnotes for Figure 43:
1 State sets minimal standard of performance for some but not all of the areas recommended by NCTQ.
2 State makes reports on program pass rates on state licensure tests available on its website, but does not make other key outcome and performance data available to the public.
Area 4: Goal B – New Mexico Analysis

State Does Not Meet Goal

ANALYSIS

New Mexico does not collect the objective, measurable data recommended by NCTQ when deciding whether a teacher preparation program should receive state approval. New Mexico's program approval process appears to be largely based on site visits and syllabi reviews, used to determine if the instruction and assessment of teacher candidates meets the state’s teaching standards.

The state does not appear to apply any transparent, measurable criteria for conferring program approval. Alaska collects programs’ annual summary licensure test pass rates (80 percent of program completers must pass their licensure exams). However, the 80 percent pass-rate standard, while common among many states, sets the bar quite low and may not be a meaningful measure of program performance.

In addition, the state’s website does not include a report card that allows the public to review and compare program performance.

SUPPORTING RESEARCH

Title II Report 2006; Title II Report 2005; Title II Report 2004

RECOMMENDATION

New Mexico does not meet this goal. The state should consider making objective outcomes the focus of its teacher preparation program approval process and establishing precise standards for program performance that are more useful for accountability purposes. At minimum, the state should require programs to report pass rates for individuals entering student teaching, not program completers, as the latter method masks the number of individuals the program was unable to properly prepare. In addition, the state should consider raising the minimum pass rate on its licensing test. Other states including Florida and Nevada, are requiring 90 or 95 percent pass rates.

New Mexico should also post an annual report card on its website that details the data it collects and the criteria used for program approval. This report card should also identify the programs that fail to meet these criteria and why they failed.

NEW MEXICO RESPONSE

New Mexico added that through its partnership with NCATE, programs must submit data demonstrating measurable objectives met by both programs and students. The state explained that these data are examined and evaluated using the NCATE rubrics during national and state accreditation visits. If a program does not meet standards, it is cited with contingencies or placed on probation and a re-evaluation is conducted within a one-year period.
LAST WORD

State approval of teacher preparation programs should focus on objective data that measure effectiveness in terms of the quality of programs’ graduates. Accreditation focuses primarily on inputs; NCATE’s approach includes only one objective outcome for program evaluation, requiring an 80 percent pass rate on state licensing tests. This criterion sets the bar quite low, and as discussed in the rationale, may mask the number of individuals programs were unable to properly prepare. Furthermore, research has not shown that programs with accreditation perform better than those without it.

“We welcome the opportunity to show that the teachers coming out of our program will be among the best in the state. We see the importance of being transparent with regard to teacher performance and demanding with regard to learning outcome expectations.”

- Tom Lasley, Dean, College of Education

**BEST PRACTICE**

While no state fully meets NCTQ's recommendations for approval of teacher preparation programs, **Alabama** and **Louisiana** do base program approval on the quality of graduates. Alabama holds programs accountable on the basis of first-year teachers evaluations by their principals, among other indicators. Alabama has established clear standards for performance and makes its findings transparent by posting the data and program grades on its website. Louisiana’s program approval process includes a number of objective outcomes. In addition, program scores are determined on the basis of a relatively complex rating formula. The state intends for the scores a program must have to increase over time, so that programs must consistently demonstrate growth.
Area 4: Goal C – Program Approval and Accreditation

The state should keep its program approval process wholly separate from accreditation.

GOAL COMPONENTS

☑️ The state should not allow its teacher preparation programs to substitute national accreditation for state program approval.

☑️ The state should not require its teacher preparation programs to attain national accreditation in order to receive state approval.

RATIONALE

▶️ See appendix for detailed rationale.

- Accreditation is concerned with inputs, how a program achieves quality; state approval of programs should be about outputs.

SUPPORTING RESEARCH

▶️ Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 4: Goal C – New Mexico Analysis

State Meets Goal

ANALYSIS
New Mexico does not require its teacher preparation programs to attain national accreditation. Though some of the state’s program approval standards are very similar to NCATE’s accreditation standards, the state does not explicitly allow programs to substitute national accreditation for state approval.

RECOMMENDATION
New Mexico meets this goal.

NEW MEXICO RESPONSE
New Mexico had no comment on this goal.
**BEST PRACTICE**

The nature of this goal does not lend itself to a best practice, as NCTQ is recommending that states avoid a specific policy, rather than pursuing one.

Area 4: Goal D – Controlling Coursework Creep

The state should regularly review the professional coursework that teacher candidates are required to take, in order to ensure an efficient and balanced program of study.

GOAL COMPONENTS

- The state should adopt policies designed to encourage efficient delivery of the professional sequence, for both its own requirements and the requirements made by individual programs.
- The state should mandate only coursework or standards that are likely to make teachers more effective in the classroom.

RATIONALE

- See appendix for detailed rationale.
- Most states have programs that demand excessive requirements.
- States should only mandate courses or set standards that relate to student achievement, giving programs discretion to determine remaining sequence.
- States need to establish a cycle for reviewing their coursework requirements.
- States need to monitor programs’ total professional coursework requirements.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 4: Goal D – New Mexico Analysis

State Does Not Meet Goal

ANALYSIS

New Mexico specifies the professional education coursework that teacher candidates must complete to qualify for licensure.

Elementary teacher candidates must complete 36 to 42 credit hours of professional education coursework (including the reading coursework discussed in Goal 2-D).

Middle school teacher candidates must complete 33 to 39 credit hours of education coursework.

High school teacher candidates must complete 27 to 33 credit hours of education coursework.

These requirements, especially those for middle and high school teacher candidates, are more extensive than those found in many states. Moreover, states setting minimum coursework requirements still need to monitor the number of credit hours that programs require, if only to ensure that they deliver content efficiently, eliminating outdated or redundant courses.

While assessing the value of coursework requires careful analysis, the sheer quantity of coursework required at some of New Mexico’s approved teacher preparation programs is cause for concern. At New Mexico State University, for instance, elementary teacher candidates must complete 58 credit hours in professional coursework, the equivalent of nearly two full majors. These are excessive requirements could easily discourage talented individuals from pursuing teaching.

SUPPORTING RESEARCH

http://education.nmsu.edu/departments/administrative/advisement/pdf/degrees/E_ED_06_07.pdf

RECOMMENDATION

New Mexico does not meet this goal. The state should consider adopting policies that can check the tendency of teacher preparation programs to impose excessive professional coursework requirements.

Other states have adopted policies in this area that the state could adapt to its own needs. New Jersey’s approach of placing a set limit on coursework is straightforward, but also decreases programs’ flexibility. Tennessee’s approach of providing a general template illustrating how coursework requirements should be allocated may provide more flexibility. In either case, states avoid tying the hands of rigorous professional programs by exempting institutions that demonstrate the value of additional coursework. States should allow programs to exceed states’ guidelines if in doing so, they produce more effective teachers—but such exemptions also require the programs to produce the sort of outcomes data described in Goal 4-B.

New Mexico’s professional standards could use some improvement (see Goal 2-A), and some of the state’s professional coursework requirements may do little to enhance teacher effectiveness. The state should work to ensure that it requires programs to deliver only professional knowledge directly related to increased student learning, letting programs decide for themselves whether or not to require additional coursework that may not be related to student learning.
NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis. The state also reiterated that all teacher preparation programs are required to meet minimum coursework requirements as well as address state-required competencies.
**BEST PRACTICE**

Teacher preparation programs in **Tennessee** are required to offer courses based roughly on a template laid out in state policy. According to this template, teacher preparation should consist of the following components:

- 50 percent of the program is devoted to general liberal arts coursework;
- 30 percent of the program is devoted to a major in a specific area;
- 20 percent of the program is devoted to professional coursework.

**New Jersey** has policies explicitly limiting the amount of professional coursework that programs may require, while also allowing exceptions for programs that can justify additional requirements. While this policy does place a check on programs’ tendency to require excessive amounts of coursework, it offers less flexibility than Tennessee’s model. Nevertheless, the state is commended for addressing this issue.

---

**Food for Thought**

An alternative to limiting the amount of professional coursework.

- See appendix for entire food for thought.

---

“I have always been passionate about teaching and education but the process to become a teacher never inspired me. Learning to teach should be provoking, not tedious and mundane. If only I could have found a challenging and exciting undergraduate program, then I would have gone into the classroom.”

- **Eric Dang, Assistant to State Legislator**

NEW MEXICO
Area 5: Goal A – Genuine Alternatives

The state should ensure its alternate routes to certification are well structured, meeting the needs of new teachers.

GOAL COMPONENTS

There are nine features which define a genuine, high-quality alternate route.

1. **Amount of coursework.** The state should ensure that the number of credit hours it either requires or allows should be manageable for the new teacher. Anything more than 12 credit hours of coursework (in which a teacher is required to physically attend a lecture or seminar) in the first year may be counterproductive, placing too great a burden on the new teacher. This calculation is premised on no more than 6 credit hours in the summer, 3 credit hours in the fall and 3 credit hours in the spring.

2. **Program length.** The alternate route program should be no longer than two years in length, at which time the new teacher should be eligible for a standard certificate.

3. **Relevant coursework.** Any coursework requirements should target the immediate instructional needs of the new teacher (e.g., seminars with other grade-level teachers, mentoring, training in a particular curriculum, reading instruction, and classroom management techniques).

4. **New teacher support.** The state should ensure that candidates have an opportunity to practice teach in a summer training program. Alternatively, the state can provide an intensive mentoring experience, beginning with a trained mentor assigned full-time to the new teacher for the first critical weeks of school, and gradually reducing the amount of time. The state should only support induction strategies that can be effective even in a poorly managed school: intensive mentoring; seminars appropriate to grade level or subject area; a reduced teaching load; and frequent release time to observe other teachers.

5. **Broad usage.** The state should not treat the alternate route as a program of “last resort,” restricting the availability of alternate routes to certain geographic areas, grades, or subject areas.

---

Goals with this icon are especially important for attracting science and mathematics teachers.
6. **Diversity of providers.** The state should allow districts and nonprofit organizations other than institutions of higher education to operate programs. To encourage diversity, states should articulate any training requirements in terms of both credit hours and clock hours.

The three remaining features, described in the next goal, address the criteria that should be considered in accepting individuals into a high-quality alternate route program: 7. Evidence of strong academic performance; 8. Verification of subject matter knowledge; and 9. Availability of “test-out” options to meet standards.

**RATIONALE**

- See appendix for detailed rationale.
- The program must provide practical, meaningful preparation that is sensitive to the stress level of the new teacher.

**SUPPORTING RESEARCH**

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 5: Goal A – New Mexico Analysis

State Meets a Small Part of Goal

ANALYSIS

New Mexico classifies its Alternative Licensure route as an alternate route to teacher certification. Because of structural flaws, in combination with low and inflexible admissions standards (see Goal 5-B), this route cannot currently be considered a genuine alternate route into the teaching profession.

Candidates are required to complete between 12 and 21 credit hours of coursework. As a result, depending on the individual program, the amount of coursework ranges from manageable to burdensome. Aside from three credits of reading courses for secondary candidates or six credits of reading for elementary candidates, the state does not further specify the topics that should be covered, except to say that the courses must address the “appropriate competencies.”

In the area of new teacher support, candidates must complete either a student teaching experience or a field experience, but the state does not specify when this opportunity must be provided. The state does not verify that this important opportunity is provided in the summer so that a candidate does not have to quit his or her job to do student teaching in the spring. And, while the state requires candidates to complete a one to three year mentoring program, it allows each local board to adopt its own mentoring policies under some very general guidelines. The guidance is not specific enough to ensure that districts will develop mentoring programs to offer new teachers the intensive support they need.

The state allows teachers in all districts and in most major subject areas to enter through this route. Teachers using this route are not eligible for the state’s standard certification for three years; this is too long.

The state does not specify coursework requirements in terms of clock hours, effectively preventing districts and other nonprofit providers from developing programs. The route is only available through colleges and universities. Online programs, however, are available.

The state is commended for permitting districts to utilize a respected national program, Teach For America, to recruit talented new teachers.

SUPPORTING RESEARCH
NMAC 6.60.3.8B; http://www.teachnm.org/bachelor_teacher_prep.html

RECOMMENDATION

New Mexico meets only a small part of this goal. New Mexico should work to ensure that a new teacher’s workload is not too great, limiting coursework to no more than one course at a time while teaching. The state should also ensure that any required coursework targets the immediate needs of new teachers.

The state may want to provide more specific guidelines about the type of coursework that will contribute the most value with the least burden. Alternatively, the state can keep program designs more flexible by regularly reviewing coursework or professional development requirements of individual programs. Such courses might include grade- or subject-level seminars; methodology in the content area; classroom management; assessment; and for elementary teachers, scientifically based early reading instruction. Simply mandating coursework without specifying the purpose of can inadvertently send the wrong message to program providers—that “anything goes” as long as credits are granted. However constructive, any course that is not fundamentally practical and immediately necessary should be eliminated as a requirement.
The state should also shore up its new teacher support, utilizing strategies that will work even in underperforming and poorly-managed schools. Effective strategies, even in poorly managed schools, include practice teaching to similar populations prior to starting to teach in the classroom, intensive mentoring with full classroom support in the first few weeks or month of school, a reduced teaching load, and relief time to allow new teachers to observe experienced teachers during each school day. New Mexico might consider New York’s policy of requiring daily mentoring for new teachers during their first eight weeks in the classroom (see Transition B route). Finally, the state should classify credit hours in terms of clock hours to provide districts and nonprofits with the ability to operate their own programs.

**NEW MEXICO RESPONSE**

New Mexico was helpful in providing NCTQ with facts that enhanced our analysis. The state added that it has 15 university-level programs that offer alternative licensure programs.

**LAST WORD**

The genesis of alternate routes to certification (going back to the 1980s) was not just to provide teachers the ability to “earn while they learn,” as New Mexico believes. This current view of alternative certification ignores fundamental principles that were behind the public pressure on states to create new routes. The motivation behind the alternative certification movement was three-fold: 1) to attract greater numbers of talented individuals into the profession (faced with declining numbers of talented college graduates choosing to teach); 2) to provide an accelerated program of study, meaning that the amount of professional coursework should be significantly reduced (in response to both popular opinion and emerging research that was unable to draw a relationship between coursework and teacher effectiveness); and 3) to eliminate widespread use of emergency certificates that allowed “anyone” to teach through more legitimate and responsible routes. While many states have intentionally or unintentionally disregarded these founding principles, there has been no evidence that should have led to their compromise. NCTQ’s definition of a genuine alternate route stays true to the founding principles, but it also fills in the practical details that can serve as useful guidelines for states.

Area 5: Goal B – Limiting Alternate Routes to Teachers with Strong Credentials

The state should require all of its alternate route programs to be both academically selective and accommodating to the nontraditional candidate.

GOAL COMPONENTS

- With some accommodation for work experience, alternate route programs should screen candidates for academic ability, such as a 2.75 overall college grade point average (GPA).
- All candidates, including elementary candidates and candidates who have a major in their intended subject area, should be required to pass a subject matter test.
- A candidate lacking a major in the intended subject area should be able to demonstrate sufficient subject matter knowledge by passing a test of sufficient rigor.

RATIONALE

- See appendix for detailed rationale.
- Alternate route teachers need the leg up of a strong academic background.
- What should be the state’s minimum academic standard?
- Multiple ways for assessing competency are needed for the nontraditional candidate.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Area 5: Goal B – New Mexico Analysis

State Meets a Small Part of Goal

ANALYSIS

Not only does New Mexico’s alternate route have serious structural flaws (see Goal 5-A), its low and inflexible admissions standards lessen the state’s capacity to advance teacher quality. Accordingly, New Mexico does not currently offer a genuine alternate route to teacher certification.

Still, New Mexico classifies its Alternative Licensure program as an alternate route to certification, so it is analyzed here for its admissions selectivity.

By requiring all of its alternate route candidates to take a subject-matter test, New Mexico meets one important criterion for a quality alternate route, but it falls short on two remaining criteria: 1) flexibility built into its policy that respects nontraditional candidates’ diverse backgrounds; and 2) some evidence from the candidate of good academic performance.

Applicants are not required to provide any evidence of their own performance as a student, such as a minimum college GPA.

New Mexico requires all candidates to pass a subject-area test. The state also requires candidates to have a major in the subject they intend to teach or a graduate degree in the field. It does not allow candidates to test out of these coursework requirements.

RECOMMENDATION

New Mexico meets only a small part of this goal. New Mexico should require candidates to submit some measure of academic caliber, such as a minimum GPA. The concept behind the alternate route into teaching is that the nontraditional candidate is able to concentrate on acquiring professional knowledge and skills because he or she has demonstrated strong subject-area knowledge and/or an above-average academic background.

The state should also allow candidates to use its subject-area test to test out of some coursework requirements. An inflexible policy can shortchange candidates from nontraditional backgrounds who may have gained expertise in a subject by means of a career or independent study.

NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis.
**BEST PRACTICE**

Arizona meets three admission criteria for a quality alternate route: 1) a requirement that all candidates pass a subject-area test; 2) flexibility built into its policy that respects nontraditional candidates’ diverse backgrounds; and 3) some evidence from candidates of good academic performance.

</tr>
</tbody>
</table>

---

1. State does not require subject area test at all, or exempt some candidates from having to take it; or does not require candidate to pass test until program has been completed.
Area 5: Goal C – Program Accountability

The state should hold alternate route programs accountable for the performance of their teachers.

GOAL COMPONENTS

The state should collect the following performance data to hold alternate route programs accountable:

- The average raw score of each program’s teachers on state licensing tests (basic skills, subject matter, professional.);
- Evaluation results from first and/or second year of teaching and percentage of teachers eligible for standard certificates and tenure;
- Academic achievement gains of graduates’ students averaged over the first three years of teaching; and
- Five-year retention rate of graduates in the teaching profession.

The state should also establish the minimum standard of performance for each of these categories of data. Programs must be held accountable for meeting these standards and the state, after due process, should shut down programs that do not do so.

The state should produce an annual report card, published on the state’s website, which shows all of the data that the state collects on individual teacher preparation programs.

The state can also collect evidence that the program limits admission to certification areas that produce too many teachers, that it trains teachers in high-shortage areas, and about the number of its graduates who take jobs in-state, out-of-state, or who do not enter the profession. It may be unwise to use these data as accountability measures.

RATIONALE

- See appendix for detailed rationale.
- Alternate route programs should show they consistently produce effective teachers.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 5: Goal C – New Mexico Analysis

- State Does Not Meet Goal

ANALYSIS

New Mexico pays insufficient attention to collecting performance data from its alternate route programs, collecting only pass rate data on state licensing tests.

The state has not set any performance standards based on any measurable outcomes that alternate route programs must meet in order to receive state approval.

The state does not post any data online, which would allow the public and prospective teachers to review and compare program performance.

RECOMMENDATION

New Mexico does not meet this goal. The state should consider establishing precise standards for program performance as recommended here and making objective outcomes a focus of its teacher preparation program approval process. New Mexico should also post an annual report card on its website that details the data it collects on individual teacher preparation programs.

NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis. The state added that it tracks the quality of teachers exiting from alternate route programs through a “dossier” process. New Mexico reported that it has been collecting pass rate data for three years and gives this information to the universities for the purpose of program planning. The state also added that all alternate route programs have to meet and pass the New Mexico NCATE standards and competencies.

LAST WORD

NCTQ found no evidence that New Mexico is collecting objective data of teacher performance. For example, if New Mexico was focusing on outputs, the success of a program’s graduates, it would not be concerned with whether the program met NCATE standards. It shouldn’t matter what philosophy a program has taught as long as the program’s teachers are successful in the classroom.

BEST PRACTICE

While no state earns a Best Practice designation in this goal, Kentucky comes the closest.
Area 5: Goal D – Interstate Portability

The state should treat out-of-state teachers who completed an approved alternate route program no differently than out-of-state teachers who completed a traditional program.

GOAL COMPONENTS

The state should accord the same license to an experienced teacher who was prepared in an alternate route as it accords an experienced teacher prepared in a traditional teacher preparation program.

The terms under which the state offers licensure reciprocity to teachers who completed a program but who have not yet taught three years should be no different for the teacher prepared in an alternate route as the teacher prepared in a traditional route.

RATIONALE

- See appendix for detailed rationale.
- States can embrace portability without lowering standards.
- Using transcript analysis to judge teacher competency provides little value.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Goals with this icon are especially important for attracting science and mathematics teachers.
Area 5: Goal D – New Mexico Analysis

State Meets a Small Part of Goal

ANALYSIS

At first glance, New Mexico policy appears more flexible than it is. New Mexico will issue a comparable license, not just an initial license, to an out-of-state teacher who was prepared in an alternate route and wishes to teach in New Mexico. The state will offer a standard ‘Level II’ license. This reciprocity, however, carries with it a significant condition. The state only accepts alternate route teachers who completed their program at an institute of higher education (IHE), with a transcript showing that they completed the “required hours.” This stipulation may require teachers to repeat some, most, or all of a preparation program in New Mexico.

New Mexico imposes the same condition on teachers prepared in an alternate route with less than three years of experience.

The state has signaled its willingness to consider licensure reciprocity for teachers prepared in an alternate route by signing a national agreement (the NASDTEC Interstate Agreement), extending reciprocity to alternate route teachers in all states, whether experienced or with less than three years of experience. This agreement, as in the case of New Mexico, does not prevent states from interpreting for themselves under what conditions they will offer reciprocity.

RECOMMENDATION

New Mexico meets only a small part of this goal. The state’s policy should recognize a teacher’s experience, employability and effectiveness. Other licensed professions rely on evidence of 1) having completed an approved or accredited preparation track; 2) passing required tests; and 3) good standing in the profession.

The state should remove its condition that alternate route teachers can only have completed a program through a college or university. States that cite the evidence of uneven quality of alternate route programs are ignoring the similarly uneven quality of traditional teacher preparation programs. The policy is also speculative; there are also no research findings suggesting that alternate route teachers who completed an IHE-based program are more effective than those who did not.

The state also needs to better accommodate out-of-state teachers with less than three years of experience. Provided that a teacher can demonstrate evidence of program completion, has satisfactory evaluations, and can meet the state’s testing requirements, the state should make an interim certificate available. The state may want to look at Georgia’s model provision in this area, which will waive another state’s experience requirement if it was the only factor that prevented a teacher from earning a standard license in that state.

State policies that discriminate against teachers who were prepared in an alternate route are not supported by any evidence. In fact, a substantial body of research has failed to discern differences in effectiveness between alternate and traditional route teachers.

States that cite the evidence of uneven quality of alternate route programs are ignoring the similarly uneven quality of traditional teacher preparation programs. Judging the quality of a candidate on the basis of what course titles are listed on a transcript is unlikely to yield any meaningful data as to the quality of the preparation or if the teacher found other ways to acquire the knowledge and skills needed.
NEW MEXICO RESPONSE

New Mexico was helpful in providing NCTQ with facts that enhanced our analysis. The state added that it was planning to streamline its reciprocity policies and reduce its reliance on transcript reviews, although it intended to continue requiring incoming teachers to complete coursework in the teaching of reading.

LAST WORD

New Mexico is commended for working to streamline its policies for out-of-state teachers, and for its commitment to ensuring that all teachers know the science of reading. However, the state could both achieve a more effective reading policy and greater flexibility by providing a rigorous test in reading that all teachers must take, and allowing someone who has attained the necessary knowledge by some other means than coursework, allowing them to test out of a coursework requirement.

Figure 64 Interstate Portability

Does NEW MEXICO Offer Reciprocity to Alternate Route Teachers without a lot of Strings Attached?

| Teachers with 3 or more years of experience | NO |
| Teachers with less than 3 years of experience | NO |
Georgia’s policies on teachers prepared through an alternate route are the most fair. Georgia offers a standard license to a teacher who completed a program but who did not yet have a standard license in the previous state, provided the only reason that prevented the teacher from earning the license was time served.

Food for Thought
Barring the National Teacher of the Year.
See appendix for entire food for thought.

“I taught middle school math for 8 years in the District of Columbia, coming in through Teach For America. I love teaching math and my students made dramatic gains on our state test. And in 2005 I was named the National Teacher of the Year. But, because I didn’t major in math, I’m not employable “as is” in many states. I’d be more than happy to take a test to demonstrate my math knowledge, but most states don’t allow this.”

- Jason Kamras, Teacher
Area 6: Goal A – Special Education Teacher Preparation

The state should articulate the professional knowledge needed by the special education teacher and monitor teacher preparation programs for efficiency of delivery.

GOAL COMPONENTS

☐ Standards for special education teachers need to be explicit and research based. It should not be possible for programs to train teachers in any method, strategy or assessment and still meet the state standards.

☐ The standards should be specific enough to drive the instruction of teacher preparation programs and inform teacher candidates of what they need to know in order to become licensed teachers.

☐ The standards should be testable.

☐ States should adopt policies that ensure efficient delivery of professional coursework and a corresponding balance between academic and professional coursework. Absent formal policies, the state can still do much to achieve this balance.

RATIONALE

► See appendix for detailed rationale.

- Standards need to define the professional knowledge teachers must have to work with students with disabilities.

- Overly prescriptive teacher preparation programs may be exacerbating state teacher shortages in special education.

- The state needs to establish a review cycle for its own coursework requirements and/or teaching standards.

- The state should monitor the number of courses, mandated or not.

SUPPORTING RESEARCH

► Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 6: Goal A – New Mexico Analysis

State Nearly Meets Goal

ANALYSIS

New Mexico requires special education teacher candidates to complete an approved program that is premised on the state’s teaching standards rather than a fixed amount of professional coursework. This standards-based approach offers approved programs and their students greater flexibility than fixed course requirements, but does not ensure that programs will provide an efficient program of study.

New Mexico’s state standards for the preparation of special education teachers are explicit and address the four critical areas that are essential to providing effective interventions for students with disabilities: historical and legal foundations, assessment, behavior, and instruction. The standards contain a section on the teaching of reading and require that teachers are knowledgeable about research, assessment, and methods of instruction in reading, as well as about the essential components of an effective reading program, as described in the Individuals with Disabilities Education Act (IDEA). While the standards should be updated to address the new assessment requirements of IDEA, they are adequate to train teachers to meet the needs of students with disabilities. Furthermore, the format of the standards with topic areas and performance indicators allow for the assessment of teacher competencies.

New Mexico’s strong standards may be undermined by the fact that individual programs are given free rein to decide how much coursework to require with no check on their tendency to require increasing amounts of professional coursework. States using a standards-based approach must monitor the number of credit hours that programs require, if only to ensure that they are delivering content efficiently, eliminating outdated or redundant courses. New Mexico’s coursework requirements for special education teachers are not excessive, requiring teachers to complete 36 credit hours of special education coursework. However, by only articulating minimum coursework requirements, the state does not ensure that programs will require appropriate coursework. For example, New Mexico State University, an approved program, requires undergraduate elementary special education majors to complete 83 credit hours in education and professional coursework, the equivalent of more than two majors. While more extensive requirements may be appropriate for teachers preparing to work with students with severe disabilities, these requirements seem excessive for general special education preparation and may discourage prospective teachers from entering the field.

SUPPORTING RESEARCH
http://education.nmsu.edu/departments/administrative/advisement/pdf/degrees/Special_Ed_06_07.pdf

RECOMMENDATION

New Mexico nearly meets this goal. Although New Mexico has stronger standards than many states, the state should also monitor the coursework required by approved programs and work with them to streamline delivery and reduce redundancy.

NEW MEXICO RESPONSE

Although the state did not have the opportunity to review our analysis of its standards, New Mexico recognized the factual accuracy of other parts of our analysis.
**BEST PRACTICE**

While no state fully meets this goal, Virginia comes closest. Virginia’s standards for special education teachers are explicit and focus on the key areas for providing effective instruction to students with disabilities. In addition, Virginia’s policy allows for flexibility while still providing proper guidance to teacher preparation programs regarding the role of professional coursework in special education teacher preparation.

**Figure 66 Special Education Teacher Preparation**

*Do States Articulate the Professional Knowledge Needed by Special Education Teachers?*

**Figure 67 Special Education Teacher Preparation**

*How do States Regulate Teacher Prep Programs’ Course of Study?*
Area 6: Goal B – Elementary Special Education Teachers

The state should require that teacher preparation programs provide a broad liberal arts program of study to elementary special education candidates.

GOAL COMPONENTS

- All elementary education candidates should have preparation in five content areas: math, science, English, social studies and fine arts.
- States should ensure that the coursework elementary special education teachers take is relevant to what is taught in the Pre-K through grade six classroom.

RATIONALE

- See appendix for detailed rationale.
- All teachers, including special education teachers, teach content, and therefore need relevant coursework.
- Test-out options: there is no sense in making teachers take coursework when they have already mastered the material.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.
Area 6: Goal B – New Mexico Analysis

State Meets a Small Part of Goal

ANALYSIS

New Mexico does not require elementary special education teacher candidates to meet the same preparation requirements as all other elementary candidates. It only requires that they meet the state’s general education requirements for all teachers, PK-12. These “gen ed” requirements are an inadequate substitute for subject matter preparation geared to the topics taught in the PK-6 classroom.

Unfortunately, New Mexico exempts elementary special education candidates from having to take the same subject matter licensing test as other elementary teachers.

RECOMMENDATION

New Mexico meets only a small part of this goal. Goal 1-B describes the steps that New Mexico should take to improve these requirements. Although there are many competing demands on the program of study for special education teachers, the state should not compromise on the fundamental principle that all children deserve teachers who are qualified in every respect. States not requiring special education teachers to be well trained in academic subject matter are shortchanging special education students, who deserve the opportunity to learn grade-level content.

Importantly, New Mexico should not exempt special education teachers from the state’s subject-area licensing tests.

NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis.
**BEST PRACTICE**

**Massachusetts** requires elementary special education teacher candidates to complete the same coursework (and pass the same test) as other elementary candidates. They must complete 36 credit hours of arts and sciences coursework including: composition, American literature, world literature, U.S. history, world history, geography, economics, U.S. government, child development, science laboratory work and appropriate math and science coursework.

- Lisa McSherry, Teacher

---

1. State requires either subject-matter coursework or a subject-matter test.
Area 6: Goal C – Secondary Special Education Teachers

The state should require that teacher preparation programs graduate secondary special education teacher candidates who are “highly qualified” in at least two subjects.

GOAL COMPONENTS

- The most efficient route to becoming adequately prepared to teach multiple subjects may be for teacher candidates to earn the equivalent of two subject-area minors and pass tests in those areas.
- Preparation should also include broad coursework in remaining core subject areas, covering topics relevant to PK-12 teaching. Secondary special education teacher candidates would therefore need to become highly qualified in as few additional subject areas as possible upon completion of a teacher preparation program (see Goal 6-D).

RATIONALE

- See appendix for detailed rationale.

- Conflicting language in IDEA and NCLB has led to much confusion.
- Secondary special education teachers need to graduate highly qualified in two subject areas.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

State Does Not Meet Goal

Area 6: Goal C – New Mexico Analysis

State Partly Meets Goal

ANALYSIS

New Mexico’s policies regarding the subject matter training of secondary special education teacher candidates are likely to ensure that new secondary special education teachers will be highly qualified in at least one core academic area upon completion of an approved program. The state explicitly requires teacher candidates to complete 24 to 36 credit hours of coursework in an academic content area.

Additionally, special education teacher candidates are required to complete the same general education requirements as all other new teachers, which are more extensive and specific than those of most states. (see Goal 1-B). These general education requirements can help prepare secondary special education candidates to teach in core subject areas.

SUPPORTING RESEARCH

6.61.5 NMAC

RECOMMENDATION

New Mexico meets this goal in part. It is ahead of most states in requiring new secondary special education teachers to become highly qualified in at least one core academic area, but the state should further require that programs prepare teachers to be highly qualified in two core academic areas. The state can use a combination of coursework and testing to meet this goal. New Mexico could also consider giving new secondary special education teacher candidates the option of completing two subject matter minors and passing tests in both.

NEW MEXICO RESPONSE

New Mexico recognized the factual accuracy of our analysis and stated that its legislators require this level of rigor.
BEST PRACTICE

While no state fully meets this goal, Michigan and New Jersey come closest. Michigan requires secondary special education teachers to have dual certification. As part of their certification, all secondary teacher candidates must complete a major in the subject area they intend to teach and a minor in another area. Teachers are eligible to be certified to teach in both fields if they pass the appropriate subject-matter tests. New Jersey is phasing in a new special education certificate that requires a grade and subject-matter-appropriate endorsement. New Jersey requires middle school teacher candidates to complete a major in one area and a minor in each additional teaching area; it requires high school teacher candidates to complete a major or the equivalent in their intended teaching area. All new secondary teachers are also required to pass a subject-area test in order to attain licensure.

13
Area 6: Goal D – Special Education Teachers and HQT

The state should customize a “HOUSSE” route for new secondary special education teachers to help them achieve highly qualified status in all the subjects they teach.

GOAL COMPONENTS

- The state should offer a customized High Objective Uniform State System of Evaluation (HOUSSE) route for new secondary special education teachers who may find the existing state HOUSSE route a mismatch.
- This unique route should be focused only on increasing teacher subject matter knowledge, not pedagogical skills.

RATIONALE

- See appendix for detailed rationale.
- The needs of special education teachers, new or veteran, are different from most other teachers needing to earn highly qualified status.
- The special education HOUSSE route needs to be clear and meaningful.

SUPPORTING RESEARCH

- Research citations to support this goal are available at www.nctq.org/stpy/citations.

Best Practice
State Meets Goal
State Nearly Meets Goal
State Partly Meets Goal
State Meets a Small Part of Goal
State Does Not Meet Goal

Area 6: Goal D – New Mexico Analysis

State Does Not Meet Goal

ANALYSIS
New Mexico does not currently have a separate HOUSSE route for new secondary special education teachers.

RECOMMENDATION
New Mexico does not meet this goal. The state should create a HOUSSE route uniquely tailored to new secondary special education teachers. They need to be able to teach one, two, three and sometimes four different subjects at a more advanced level than what is required of elementary special education teachers. Although ideally these teachers will graduate with highly qualified status in two core areas (see Goal 6-C), the state should provide a practical and meaningful way for them to achieve highly qualified status in all remaining core subjects once they are in the classroom.

States’ HOUSSE routes for veteran teachers are inappropriate for meeting this goal as they typically award significant points for teaching experience, professional development, and other qualifications that new teachers lack. Moreover, these options are insufficient for ensuring adequate content knowledge.

NEW MEXICO RESPONSE
New Mexico recognized the factual accuracy of our analysis. The state added that New Mexico is in the process of developing a web-based program to help special education teachers assess their knowledge in core subject areas to determine whether they are ready to take tests in them.

LAST WORD
New Mexico is commended for acknowledging and addressing this problem. Provided that it is part of a coherent policy strategy to help secondary special education teachers attain “highly qualified” status, we look forward to giving it a high rating in next year’s Yearbook.
BEST PRACTICE

Unfortunately, NCTQ cannot highlight any state’s policy in this area.

Food for Thought

An illustration of the problems that a new special education teacher faces.

See appendix for entire food for thought.
Appendix

AREA 1: GOAL A
Equitable Distribution

Rationale

States need to report data at the level of the individual school.

Only by achieving greater stability in the staffing of individual schools can school districts hope to achieve the nation’s goal of more equitable distribution of teacher quality. A strong reporting system reflecting data on teacher attrition, teacher absenteeism, and teacher credentials can lend much-needed transparency to those factors that contribute to staffing instability and inequity.

The lack of such data feeds a misconception that all high-poverty schools are similarly unable to retain staff because of their socioeconomic and racial status. If collected and disaggregated to the level of the individual school, however, such data could shift the focus of districts and states toward the quality of leadership at the school level and away from the notion that instability and inequity are simply the unavoidable consequences of poverty and race.

The truth is that there are huge variations in staff stability among schools with similar numbers of poor and/or minority children. School culture, largely determined by school leadership, contributes greatly to teachers’ morale, which in turn affects teachers’ success and student achievement. By revealing these variations between schools facing the same challenges, school leadership can be held accountable—and rewarded when successful.

Within-district comparisons are crucial in order to control for as many elements specific to a district as possible, such as a collective bargaining agreement (or the district’s personnel policies) and the amount of resources.

Experience matters a lot at first, but quickly fades in importance.

Teacher experience matters, but the benefits of experience are in large part accumulated within the first few years of teaching. School districts that try to equalize experience among all schools are overestimating the impact of experience. In other words, there is no reason why a school with many teachers with only three to five years of experience cannot outperform a school with teachers who have an average of 10 to 15 years of experience. That is why NCTQ’s recommendations suggest that states focus on indicators of high turnover year to year, not the youth of a staff.

Sweeping policy changes may be needed.

To achieve the goal of equitable distribution as intended by No Child Left Behind (NCLB), states also need to consider key reforms, addressed in other Yearbook goals:

- Remove regulations that permit teachers who have not passed state licensing tests to teach for more than one year (Goal 2-B);
- Remove any compensation restrictions that block districts from paying higher salaries to qualified teachers working in high-poverty schools, including restrictions that block salary differentials for high-shortage subject areas and pay for performance (Goal 3-D);
- Cultivate flexible, high-quality alternate routes that can prepare qualified teachers, especially in high-shortage subject areas, such as math and science (Goals 5-A, 5-B, 5-C); and
- Make it more practical for special education teachers to complete undergraduate training and achieve “highly qualified teacher” status in multiple subjects (Goals 6-A, 6-B, 6-C, 6-D).

Teacher compensation is a critical carrot.

To the extent that states have a role in local teacher compensation systems, they can also target resources to qualified teachers who agree to serve in Title I schools.

- Many states are currently experimenting with programs to direct existing or newly identified funds to high-poverty schools.
- Almost all states currently provide across-the-board bonuses to National Board-certified teachers, but without factoring in the school environment (see Goal 3-D). Such bonuses or pay differentials could be refashioned to reward National Board teachers who choose to work in high-poverty schools.

BACK to Area 1: Goal A.

AREA 1: GOAL B
Elementary Teacher Preparation

Rationale

Elementary teachers need coursework that is relevant to the PK through 6 classroom.

Currently, many states’ policies fail to guarantee that elementary teacher candidates will complete coursework in topics relevant to common topics in elementary grades, specifically topics found in the elementary learning standards.
Even when states specify liberal arts coursework requirements, the regulatory language can be quite broad, alluding only loosely to conceptual approaches such as “quantitative reasoning” or “historical understanding.” Another common but inadequate approach that states take is to specify broad curricular areas like “humanities” or “physical sciences.” A humanities course could be a general overview of world literature—an excellent course for a prospective elementary teacher—but it could also be “Introduction to Film Theory.” Likewise, a physical science course could be an overview of relevant topics in physics, chemistry, and astronomy, or it could focus exclusively on astronomy and fail to prepare a teacher candidate to understand basic concepts in physics.

Too few states’ requirements distinguish between the value gained from a survey course in American history, such as “From Colonial Times to the Civil War,” and an American history course such as “Woody Guthrie and Folk Narrative in the Great Depression.”

In addition to the common-sense notion that teachers ought to know the subjects they teach, research supports the benefits to be gained by teachers being broadly educated. Teachers who are more literate—who possess richer vocabularies—are more likely to be effective. In fact, of all the measurable attributes of a teacher, teacher literacy correlates most consistently with student achievement gains.

Some states still require that elementary teacher candidates major in elementary education, with no expectation that they be broadly educated. Others have regulatory language that effectively requires the completion of education coursework instead of liberal arts coursework by mandating courses in ‘methods and materials of teaching’ core academic areas, rather than in the areas themselves.

Subject area coursework should be taught by arts and sciences faculty.

Most states do not explicitly require that subject matter coursework be taught by academics in the field, that is, faculty from a university’s college of arts and sciences. While an education professor who specializes in science education, for instance, is well suited to teach effective methodologies in science instruction, a scholar in science should provide the foundation work in the subject itself.

States cannot leave these decisions entirely in the hands of teacher preparation programs because it can run counter to their financial interest to send teacher candidates to the college of arts and sciences to complete coursework.

Standards-based programs can work when verified by testing.

Many states no longer prescribe specific courses or credit hours as a condition for teacher candidates to qualify for a license. Instead, they require teacher candidates to complete an approved program that meets the standards set forth by accrediting bodies—the National Council for Accreditation of Teacher Education (NCATE) and the Association for Childhood Education International (ACEI)—and leave it at that. The advantage of this “standards-based” approach is that it grants greater flexibility to teacher preparation programs regarding program design.

However, there is also a significant disadvantage: the standards-based approach is far more difficult to monitor or enforce. While some programs do a great job with the flexibility, others do not. Though the ACEI/NCATE standards may provide many benefits, they are too general for states to rely on as a guarantee of adequate subject matter training. For example, ACEI’s standard for “acceptable” knowledge in social studies says that elementary teacher candidates should “Demonstrate knowledge and understanding of the themes, concepts, and modes of inquiry drawn from the social studies that address: (1) culture; (2) time, continuity, and change; (3) people, places, and environment; (4) individual development and identity; (5) individuals, groups, and institutions; (6) power, governance, and authority; (7) production, distribution, and consumption; (8) science, technology, and society; (9) global connections; and (10) ideals and practices.” These broad conceptual themes do very little to articulate the actual knowledge that elementary teacher candidates should possess.

What is the answer? Standards are important, but they are essentially meaningless without strong tests to ensure that teacher candidates have met them. States choosing to take a standards-based approach have not put such tests in place. Verifying that teacher preparation programs are teaching to the standards requires an exhaustive review process of matching every standard with something that is taught in a course. This approach is neither practical nor efficient. Standards, absent tests verifying that a teacher has mastered a subject area, end up being meaningless. Tests of broad subject matter are not the solution either, given that it is possible to pass current state tests having failed two or more sections of these tests.
Teacher candidates need to be able to ‘test out’ of coursework requirements.

Many elementary teacher candidates have acquired the knowledge needed to teach elementary grades in their high school coursework and other experiences. Someone who has earned a score of 3 or higher on an Advanced Placement (AP) exam in American history does not need to take a general survey course in college but should be eligible to take an American history course with a more focused topic. States need to have some process for allowing teacher candidates to test out of survey requirements.

A legitimate test-out option would require individual subject matter tests, or at least minimum sub-scores on a general test. Good policy would also accept equivalent scores from AP and SAT II tests.

Mere alignment with student learning standards is not sufficient.

Another growing trend in state policy is to require teacher preparation programs to align their instruction with the state’s student learning standards. In many states, this alignment exercise is the only factor in deciding the content that will be delivered to elementary teacher candidates. Alignment of teacher preparation with student learning standards is an important first step, but it is by no means the last step. For example, a program should prepare teachers in more than just the content that the state expects of its fourth graders. The next critical step, moving past alignment, is to decide the broader set of knowledge a teacher needs to have to be able to effectively teach fourth grade. The teacher’s perspective must be both broader and deeper than what he or she will actually teach.

Approved programs should prepare middle school teacher candidates to be qualified to teach two subject areas.

Since No Child Left Behind requires most aspiring middle school teachers to possess a major or pass a test in each teaching field, this provision would appear to largely preclude them from teaching more than one subject. However, middle school teacher candidates could instead earn two subject-area minors, gaining sufficient knowledge to pass state licensing tests and be highly qualified in both subjects. This policy would give schools much more flexibility in staffing, especially since teachers seem to show little interest in taking tests to earn highly qualified teaching status in another subject once they are in the classroom. There is little evidence from the research that middle school teachers with a major will be more effective than middle school teachers with a minor; and in fact most middle schools do not require this credential of teachers.

Subject area coursework should be taught by arts and sciences faculty.

Most states do not explicitly state that subject matter coursework should be taught by subject matter experts, that is, faculty from the university’s college of arts and sciences. While an education professor who specializes in science education, for example, is well suited to teach effective methodologies in science instruction, a professor of science should provide foundation work in the subject.

States cannot leave these decisions entirely in the hands of teacher preparation programs because it can run counter to their financial interest to send teacher candidates outside of the program to complete coursework.
credit for certain professional activities that bore little or no
connection to their command of content knowledge—pro-
essional development seminars, service activities, curricu-
lum design and mentoring, for example—and in doing so,
provided loopholes for unqualified teachers to attain highly
qualified status. In most cases, states’ HOUSS plans have
done little to verify that veteran teachers possess the
requisite subject matter knowledge for delivering effective
instruction.

HOUSS plans need to be phased out.

In response to the ineffective use of HOUSS as a means
for verifying content mastery, the federal government
has been working with states to phase out this first set of
HOUSS plans.

In May 2006 the U.S. Department of Education asked
states to provide plans for requiring all teachers hired prior
to the 2005-2006 school year to complete the HOUSS
process. This directive was made under the reasoning that
most “not new” teachers have already had ample time to
activate the HOUSS option, and that the process should
be brought to a close.

The Department also stipulated that HOUSS should be
discontinued as an option for any teacher hired after the
start of the 2005-2006 school year, with the following ex-
ceptions: rural secondary teachers who are teaching multi-
ple subjects and are already highly qualified in one subject
area; special education teachers teaching multiple subjects
who are already highly qualified in one of the core areas
specified in the Individuals with Disabilities Education Act
2004; and teachers from other countries teaching in the
U.S. on a temporary basis.

The Department of Education was correct in advising
states to discontinue the use of HOUSS for most teachers;
the option does not offer a viable path to proving content
proficiency for most teachers. States should both limit the
use of HOUSS for veteran teachers by the close of the
2007 school year, and implement a new HOUSS system
available only to the teacher areas specified here.

AREA 1: GOAL E
Standardizing Credentials

Rationale

Different definitions of a major and minor pose a
burden on teachers.

There are still considerable disparities between states’ in-
terpretations of No Child Left Behind’s requirement that
teachers must earn a major. Indeed, some states do not
define these academic benchmarks at all. The unfortunate
consequence of these interstate disparities is that teachers
may have to take additional coursework to meet one state’s
definition of a major if the state in which they trained had
a different definition. In order to move towards a system
of national portability of licenses and endorsements, states
need to adopt a standard definition of both a major and a
minor.

The job of the state is to set the minimum standard, not
the optimum.

Some states require teachers to complete more than the
equivalent of a standard major in subject matter course-
work in order to qualify for a license. States should primar-
ily be concerned with setting the minimum standards for
entry into the profession and not impose coursework re-
quirements that go beyond this standard. There is no body
of research that shows teachers are more effective for tak-
ing additional subject matter courses beyond what a major
requires. What little research exists indicates that there is a
ceiling effect for the value of coursework beyond a certain
level. Also, when states require more than a standard major,
they may make it more difficult for individuals to complete
alternate routes to licensure.

Multi-subject majors may be an exception.

When a major is required that includes study of multiple
disciplines, the 30-credit hour standard may not be appro-
priate. Elementary teachers, for example, may need to take
considerably more than 30 credit hours in coursework (see
Goal 1-B) to be broadly educated in all of the core subject
areas. The program of study recommended in Goal 1-B for
elementary teachers would require at least 42 credit hours
of study.

BACK to Area 1: Goal D.

BACK to Area 1: Goal E.
AREA 2: GOAL A
Defining Professional Knowledge

Rationale

Standards need to be grounded in science and proven practices.

The state can work to avoid standards that offer little more than emotion-laden beliefs or ideologies by supporting standards with references. By including citations to specific research-based texts, the state can ensure that all entry-level teachers are utilizing the best and most current research. Citing specific research will also enable the state to create more effective testing and will guarantee that new teachers have this required knowledge before entering the classroom. This type of standardization is critical in guiding teacher preparation programs and ensuring that entry-level teachers have the same foundational knowledge. In light of the pace of current research, adding greater detail to these references can also help states recognize how quickly material may become outdated, while also facilitating communication across states about best practices.

Standards need to address expectations for the novice teacher.

Many states’ teaching standards are generic in tone and are written for all teachers, regardless of their experience. In addition, assessing whether or not a teacher has met many of these standards would require an opportunity to extensively observe the teacher in action, which makes them inappropriate for the purposes of a state licensing decision. For state teaching standards to be of any practical use in assessing new teachers, they must be written specifically for the new teacher, with no presumption of experience.

Teacher dispositions are hard to assess.

Many states’ standards articulate not only the professional knowledge and skills that teachers should have but also their “dispositions” (e.g., demonstrates a caring attitude, works collaboratively, respects diversity). While having a good disposition for teaching is important, it is not feasible for the state to assess a teacher’s personal attributes. What the state articulates in its standards should be testable; dispositions are at best only observable, and it is difficult to do so reliably. Furthermore, some teachers may be quite effective while not necessarily meeting an ideal vision of what constitutes a good teacher.

Standards need to be specific to be useful.

Many states’ standards are based on the Interstate New Teacher Assessment and Support Consortium (INTASC) Principles (http://www.ccsso.org/content/pdfs/corestrd.pdf), which are not nearly specific enough to offer meaningful guidance to preparation programs and teacher candidates, much less form the basis of a rigorous pedagogy test. INTASC is clear about the fact that its standards are meant to offer no more than a starting point, but many states go no further. In an August 2006 update, INTASC explained that its standards are only “model” standards and intended to be a resource that all states can use to develop their own specific standards. The need for development of clear, specific standards is also highlighted by the National Council for Accreditation of Teacher Education (NCATE). NCATE’s standards explain that teacher candidates should be able to “reflect a thorough understanding of pedagogical content knowledge delineated in professional, state, and institutional standards” (NCATE Standard 1, page 15). The acknowledgment by these two organizations, to which many states defer on such matters, highlights the importance of specific state standards. It is the responsibility of the state to articulate a body of standards that applies to all teachers and that can guide the setting of institutional standards. NCATE can only act as a monitor of compliance. Without the state fulfilling this critical role, the NCATE accreditation process is significantly weakened, and, more importantly, there can be no guarantee that new teachers will enter the classroom with the same foundational knowledge.

A good test puts teeth in standards.

In order to ensure that the state is only licensing teachers that meet its expectations, all standards must be testable. There is no point in the state specifying standards that cannot be assessed in a practical and cost-effective manner. Examples of knowledge that can be tested include the basic elements of good instruction, how to communicate effectively with children, how to use class time efficiently, effective questioning techniques, establishing smooth classroom routines, the importance of feedback, engaging parents, the best methods for teaching reading (as well as other subject areas), appropriate use of technology, knowledge of testing, and the fundamentals of dealing with individual learning challenges.

Too many tests used by states to measure new teachers’ professional knowledge utterly fail to do so, either because the passing score is set so low that anyone—even those who have not had professional preparation—can pass or because...
it is possible to discern the “right” answer on an item simply by the way it is written.

▲ BACK to Area 2: Goal A.

**Food for Thought**

**Backing up standards with research.**

All skills that are applied in the classroom begin as knowledge of theory, research and best practices. Optimally, new teachers have integrated this body of knowledge before gaining access to classroom teaching. It is the responsibility of the state to make sure that teaching candidates are equipped with the highest-quality, most current and clearest information on teaching practices, classroom management and research-based information on childhood development and learning. To meet this goal, state standards must do more than consist of ambiguities and platitudes. While it is up to teacher preparation programs to design the curriculum for specific classes, it is up to the state to ensure that teaching candidates at all programs receive a common core of foundational knowledge. State standards must standardize this body of knowledge. As such, it is incumbent upon these state standards to cite core research in the form of texts and scholarly articles that should be taught in all programs in the state. In light of the pace of current research about areas such as brain development and learning disabilities, states have a great deal to gain by bringing together panels to develop research citations for use in state standards. Ensuring that the best research is being utilized is the responsibility of the state. Instead, some states have standards documents that have been untouched for more than 10 years.

While backing up standards with good research and texts would certainly represent a new approach, it has the potential to dramatically improve the quality of teaching candidates and make the state more responsive and agile in dealing with important issues in education. This type of specificity will allow standards to better address the core knowledge found to help raise student achievement, as well as target specific weaknesses that may have been found in entry-level teachers. States will be able to go back once a target area has been identified and check the research that is being used, adding more or replacing what has been found to be outdated or ineffective.

This type of standardization would also allow states to be more responsive to new issues in education. Issues of school safety and in-school violence, for example, might have required little reference in state standards decades ago. States could better equip new teachers and ensure that these issues are being addressed by all programs through research citations. These references would not only provide uniformity for teaching candidates, but could also act as an important reference for veteran teachers. State standards have the potential to gain greater practical relevance and vitality through research citations.

▲ BACK to Area 2: Goal A.

**AREA 2: GOAL B**

**Meaningful Licenses**

**Rationale**

The title of “Teacher” should signify an accomplishment.

While states clearly need a regulatory basis for filling classroom positions with a small number of people who do not hold full teaching credentials, many of the regulations used to do this put the instructional needs of children at risk, year after year. For example, schools can make liberal use of provisional certificates or waivers provided by the state if they fill classroom positions with persons who may have completed a teacher preparation program but who have not yet passed their state licensing tests. These allowances may be made for up to three years in some states. The unfortunate consequence is that students’ needs are neglected in an effort to extend personal consideration to adults who are unable to meet minimal state standards. While some flexibility is necessary because licensing tests are not always administered with the frequency that is needed, the availability of provisional certificates and waivers year after year signals that even the state does not put much stock in its licensing standards or what they represent. States accordingly need to ensure that any person given full charge of children is required to pass the relevant licensing tests in their first year of teaching. Licensing tests are an important minimum benchmark in the profession, and states that allow teachers to postpone passing these tests for too long are abandoning one of the basic responsibilities of licensure.

▲ BACK to Area 2: Goal B.

**Food for Thought**

**Distinguishing teachers who have not passed licensing tests from fully certified teachers.**

The state may want to consider labeling these individuals interns, long-term substitutes or instructors, or using some
other title to distinguish them from fully certified teachers. This mirrors the practice of higher education, which delineates a person’s credentials and the milestones they have achieved in the title conferred by college or university.

▲ BACK to Area 2: Goal B.

AREA 2: GOAL C
Interstate Portability

Rationale
Using transcript analysis to judge teacher competency provides little value.

In an attempt to ensure that teachers have the appropriate professional and subject matter knowledge base when granting certification, states often review a teacher’s college transcript, no matter how many years ago a bachelor’s degree may have been earned. A state certification specialist reviews the college transcript, looking for course titles that appear to match existing state requirements. If the right matches are not found, this analysis may then serve as a basis for requiring teachers to complete additional coursework before being granted full standard licensure. This practice even holds true for experienced teachers who are trying to transfer from another state, regardless of how experienced or successful a teacher they are. The application of these often complex state rules results in unnecessary obstacles to hiring talented and experienced teachers. There is little evidence that the process of reviewing a person’s undergraduate coursework improves the quality of the teaching force or ensures that teachers have adequate knowledge.

Testing requirements should be upheld, not waived.

While many states impose burdensome coursework requirements, they often fail to impose minimum standards on licensure tests. Instead, they offer waivers to veteran teachers transferring from other states, thereby failing to impose minimal standards of professional and subject matter knowledge. In upholding licensure standards for out-of-state teachers, the state should be flexible in its processes but vigilant in its verification of adequate knowledge. Too many states currently have policies and practices that reverse these priorities, focusing diligently on comparison of transcripts to state documents while demonstrating little oversight of teachers’ knowledge. If states can verify that a teacher has taught successfully and possesses the required subject matter and professional knowledge, their only concern should be ensuring that transferring teachers are familiar with the state’s student learning standards.

Signing on to the NASDTEC Interstate Contract at least signals a willingness to consider portability.

Many states have signed onto the Interstate Agreement sponsored by the National Association of State Directors of Teacher Education and Certification (NASDTEC), an organization concerned with facilitating licensure reciprocity. However, the NASDTEC Interstate Agreement does not guarantee full transfer of certification and endorsement. Although most states have signed the agreement, many of them still require veteran teachers to complete additional coursework in order to attain full licensure. Nevertheless, by signing this agreement, states are taking a good first step toward achieving nationwide portability.

▲ BACK to Area 2: Goal C.

Food for Thought

Consider the recent case of a music teacher from Indiana.

Consider the recent case of a music teacher from Indiana, Neil Manzenberger, who had 30 years of teaching experience but was only granted a provisional license by the state of Arizona. The reason for the provisional status is that Manzenberger had not taken the course “Methods of Teaching Elementary Music.” He had, however, taught that class at the college level to teacher candidates. Veteran teachers deserve greater flexibility and deserve to be treated as professionals who can prove their competency without facing new obstacles. At the time of this writing, the state of Arizona—which purportedly offers reciprocity to licensed Indiana teachers by way of the NASDTEC Interstate Agreement—had not granted Manzenberger full certification and does not plan to do so until he has completed the course. An unusual case? Not at all. There are similar stories to be found in nearly every state.

▲ BACK to Area 2: Goal C.

AREA 2: GOAL D
Teacher Prep in Reading Instruction

Rationale
Reading instruction should address five essential components.

Teaching children to read is the most important task that teachers undertake. While elementary teachers need to be well-versed in the five components of reading (phonemic awareness, phonics, fluency, vocabulary, and comprehension), even secondary teachers need some knowledge of this
process, particularly if they work in high-poverty schools.

Many states’ policies still do not reflect the strong research consensus in reading instruction that has emerged over the last few decades and that is a key provision of the No Child Left Behind Act. Many teacher preparation programs, still caught up in the reading wars, resist teaching scientifically based reading instruction. States need to make clear to programs the importance of delivering adequate training in reading instruction.

**Most current reading tests do not offer assurance of teacher knowledge.**

Many states, like California, have pedagogy tests that include items on reading instruction. However, since reading instruction is only addressed in one small part of most of these tests, it is often not necessary to know the science of reading in order to pass. States need to make sure that it is not possible for a teacher candidate to pass a test that purportedly covers reading instruction without knowing the critical material.

▲ BACK to Area 2: Goal D.

**AREA 2: GOAL E**

**Distinguishing Promising Teachers**

**Rationale**

A teacher’s own academic ability matters.

Teacher quality research indicates that there is a positive correlation between a teacher’s verbal ability, as measured by his or her performance on college aptitude tests, and the ability of a teacher to raise student achievement. In fact, based on 50 years of cumulative research, this is the most important of any measurable teacher attributes, including certification status, experience, and advanced degrees. Many educators still operate under an assumption that a teacher’s own academic ability is not of particular significance and place no value on hiring teachers with stronger academic backgrounds. States can help to raise understanding of the importance of a teacher’s own ability by conferring beginning teacher licenses that distinguish academic performance of the candidates, helping school principals and district administrators to also recognize the importance of this significant attribute.

▲ BACK to Area 2: Goal E.

**AREA 3: GOAL A**

**Evaluating Teacher Effectiveness**

**Rationale**

Teachers should be judged primarily by their impact on students.

While there are many factors to be considered when a teacher is formally evaluated, nothing is more important than effectiveness in the classroom. Unfortunately, many evaluation instruments used by districts, some of which are mandated by states, are structured so that teachers can earn a satisfactory rating without any evidence that they are sufficiently advancing student learning in the classroom. It is often enough that they just appear to be trying, not necessarily succeeding.

Many evaluation instruments give as much weight, or more, to factors that do not bear any direct correlation with student performance, such as taking professional development courses, assuming extra duties like sponsoring a club or mentoring, and getting along well with colleagues. Some instruments express a hesitation to hold teachers accountable for student progress. Teacher evaluation instruments should include a combination of factors and combine both human judgment and objective measures of student learning.

A teacher evaluation instrument that focuses on student learning could include the following components:

I. **OBSERVATION**

1. Ratings should be based on multiple observations by multiple persons, usually the principal and senior faculty, within the same year to produce a more accurate rating than is possible with a single observation. Teacher observers should be trained to use a valid and reliable observation protocol (meaning that the protocol has been tested to ensure that the results are trustworthy and useful). They should assign degrees of proficiency to observed behaviors.

2. The primary observation component should be the quality of instruction, as measured by: student time on task; student grasp or mastery of the lesson objective; and efficient use of class time.

3. Other factors often considered in the course of an observation can provide useful information:
   - Questioning techniques and other methods for engaging class;
   - Differentiation of instruction;
Continual student checks for understanding throughout lesson;
- Appropriate lesson structure and pacing;
- Appropriate grouping structures;
- Reinforcement of student effort; and
- Classroom management and use of effective classroom routines.

Some other elements commonly found on many instruments, such as “makes appropriate and effective use of technology,” or “ties lesson into previous and future learning experiences,” may seem important to document but can be difficult to reliably do so in an observation. Too many elements often end up distracting the observer from focusing on answering one central question: “Are students learning?”

II. OBJECTIVE MEASURES OF STUDENT LEARNING
Apart from the observation, the evaluation instrument should provide evidence of work performance. Many districts use portfolios, which create a lot of work for the teacher and may be unreliable indicators of effectiveness. Good and less-cumbersome alternatives exist to the standard portfolio:
- The value that a teacher adds, as measured by standardized test scores (see Goal 3-B);
- Periodic standardized diagnostic assessments;
- Benchmark assessments that show student growth;
- Artifacts of student work connected to specific student learning standards that are randomly selected for review by the principal or senior faculty, scored using rubrics and descriptors;
- Examples of typical assignments, assessed for their quality and rigor; and
- Periodic checks on progress with the curriculum (e.g., progress on textbook) coupled with evidence of student mastery of the curriculum from quizzes, tests, and exams.

Food for Thought

Identifying good ways to assess teacher effectiveness.
NCTQ asked practicing teachers and school administrators to identify ways that different types of teachers might be held accountable for student learning. They suggested evaluating teachers according to some combination of the following measures, emphasizing the need to use multiple criteria to ensure effective and fair evaluation:

Kindergarten
- Beginning, middle, and end-of-year diagnostic tests of literacy and math skills, administered by both the teacher and someone outside the classroom;
- Unannounced walkthroughs on a monthly basis in which principals can review recent student work;
- Lesson plans, especially for newer teachers;
- Observations (formal and informal—at least two formal);
- Tracking student mastery on a checklist of standards (struggling, basic, proficient, advanced).

Third Grade
- Quarterly assessments of literacy and math standards;
- Value-added gains on standardized tests, averaged over three-year period;
- Lesson plans, especially for newer teachers;
- Observations (formal and informal—at least two formal);
- Grade book rubric (weekly grade per subject);
- Progress on textbook/curriculum, checked against student mastery.

Secondary Foreign Language
- Teacher is at ease and conversant in the language;
- Quarterly written, listening and speaking assessment measuring mastery of student learning standards;
- Lesson plans, especially for newer teachers;
- Observations (formal and informal—at least two formal);
- End-of-year exam grades, if standardized across teachers;
- Student grades on SAT II and AP foreign language tests;
- Progress on textbook/curriculum, checked against student mastery;
- Year-end student evaluations of the teacher.

High School Mathematics
- Observations (formal and informal—at least two formal);
- End-of-year exam grades, if standardized across departmental teachers;
- Student grades on SAT II and AP exams if subject is Calculus or Statistics;
- Progress on textbook/curriculum, checked against student mastery with sampling of rigorous quizzes and tests;
- Year-end student evaluations of the teacher.
High School Art (similar structure for P.E., music, etc.)
- Diagnostic test at beginning and end of school year (based on state standards; e.g., color, line, form);
- Lesson plans collected on a regular basis, biweekly. Daily/weekly lesson plans must always be present and accessible in classroom (portfolio and lesson plans must correspond);
- Observations (formal and informal—at least two formal);
- Student grades on AP art exam;
- Student participation and performance in local art contests;
- Year-end student evaluations of the teacher;
- Art-related participation in school events, such as set design, posters.

A word of caution about lesson plans: While they impose important structure and organization for the less-experienced teacher, they do not always mirror what is actually happening in the classroom. Ineffective teachers are often capable of producing good lesson plans; the real question is, can they deliver the lesson successfully? More experienced teachers, on the other hand, often do not need to make formal lesson plans in order to teach well.

Back to Area 3: Goal A

Area 3: Goal B
Using Value-Added Rationale

What is value-added analysis?
Value-added models are an important new development in measuring student achievement and school effectiveness. Value-added models measure the learning gains made by individual students, controlling for students’ previous knowledge. They can also control for students’ background characteristics. In the area of teacher quality, value-added models offer a fairer, and potentially more meaningful, way to evaluate a teacher’s effectiveness than previous methods used by schools.

For example, it used to be that a school might have only known that its fifth-grade teacher, Mrs. Jones, consistently had students who did not score on grade level on standardized assessments of reading. Once the school had access to value-added analysis, it learned that Mrs. Jones’ students were reading on a third-grade level when they entered her class, and that they were above a fourth-grade performance level at the end of the school year. While not yet reaching appropriate grade level, Mrs. Jones’ students had made more than a year’s progress in her class. Because of value-added data, the school was able to see that Mrs. Jones is an effective teacher.

There are a number of responsible uses for value-added analysis.

Assessing Individual Teachers
With three years of good data, value-added analysis can successfully identify the strongest and weakest teachers. It is not as useful at distinguishing differences among teachers in the middle range of performance. (See Goal 3-A).

School Performance
Value-added analysis can accurately assess the learning gains and losses made within a single school, with less risk of measurement error. The U.S. Department of Education is now working with states to pilot something akin to value-added analysis, known as “student growth” models for determining schools’ Adequate Yearly Progress (AYP). Student growth models are not as effective as value-added models at controlling for other factors besides the quality of the teacher. Yet, these models are still valuable for providing a measure of academic improvement for the school overall, leaving open their potential use for determining school-wide bonuses. A good value-added model is a subset of a student growth model; it is able to more precisely separate out nonschool effects on learning, making it possible to better distinguish the impact of an individual teacher.

Applicability to All Teachers
Many critics of value-added models dismiss them because they can only be used for teachers in tested subjects. While some subjects do not lend themselves to a value-added model, more types of teachers may be eligible than may be immediately obvious. For example, student reading scores are certainly affected by the quality of social studies and science instruction, not just instruction in language arts. Reading comprehension is directly connected to student learning of broad subject matter, including history, geography, and science.

High School
A value-added model is theoretically most useful at the high school level, because high school teachers are typically assigned many more students, making results more reliable within a given year. Data from an elementary class size of 20 to 30 students can produce relatively unstable results for a single year. A high school teacher, however,
will be assigned on average 120 students, yielding a much more stable, reliable indicator of actual teacher performance. Use at the high school level would require states adopting reliable pre- and post-tests in core subject areas.

PILOTS
States can directly and indirectly encourage districts to implement value-added analysis. By piloting value-added analysis in districts or schools, the state can encourage the development of this valuable tool for eventual statewide use. Other programs, such as state-sponsored pay-for-performance programs that base bonuses, in part, on teachers’ ability to produce student academic gains, can also encourage experimentation with value-added analysis.

EVALUATING TEACHER PREPARATION PROGRAMS
Another innovative use for value-added technology is its inclusion in the evaluation of teacher preparation programs. Value-added analysis that can measure the effectiveness of program graduates can provide valuable information that will hold poor teacher preparation programs accountable, as well as identifying strong programs that can be models for best practices.

Food for Thought
Building state longitudinal data systems: laying the foundation for value-added methodology.

To create a value-added model, a state has to have certain capacities for collecting data, including at least three elements:

1. Every student in the state must be assigned a unique identifier, so that students can be tracked from year to year no matter where they are in school;
2. Student identifiers must be linked to the state’s assessment system, in order to follow the progress of a student’s learning over time; and
3. Every teacher in the state must be assigned a unique identifier, so that student test records can be matched with individual teachers.

The Data Quality Campaign (DQC; www.dataqualitycampaign.org) has surveyed states for the last four years about the capacity of their data systems. According to the 2006-2007 DQC survey, 15 states report having these three elements in place. They are: Arkansas, Delaware, Florida, Georgia, Hawaii, Kentucky, Louisiana, New Mexico, Ohio, Rhode Island, South Carolina, Tennessee, Utah, West Virginia and Wyoming.

Although states’ data system might have these three elements, they could still be a long way off from actually implementing value-added methodology.

When considering these survey results, there are some caveats to keep in mind:

- The list of states with the three critical elements reflects only the states’ data system capacity, not actual action on the parts of states toward putting value-added methodology in place.
- The DQC survey results are based on the states’ reporting of their own capacity. Survey results have not been validated by anyone outside of the states, which means these responses should be considered cautiously. States might overstate their data systems’ capacity.
- These three data elements are necessary but by no means sufficient for value-added analysis.
- In some cases, for example, the states might have each of the elements in place, but lack an infrastructure that allows the different components to “talk” with one another and generate the actual value-added analysis.
- There are also limitations based on state assessment systems, specifically regarding score comparability from one year’s test to another.

Still, despite these limitations, encouraging states to develop these capacities is a minimum requirement for developing longitudinal student and teacher data systems.

AREA 3: GOAL C
Teacher Evaluation
Rationale
Annual evaluations are standard practice in most professional jobs.

Most states do not mandate annual evaluations of teachers who have reached permanent or tenured status. The lack of regular evaluations is unique to the teaching profession and does little to advance the notion that teachers are professionals.

Further, teacher evaluations are too often treated as mere formalities, rather than as important tools for rewarding good teachers, helping average teachers improve, and hold-
ing weak teachers accountable for poor performance. State policy should reflect the importance of evaluations so that teachers and principals alike take their consequences seriously. Accordingly, states should consider articulating policies wherein two negative evaluations within five years are sufficient for justifying dismissal of a teacher.

▲ BACK to Area 3: Goal C.

AREA 3: GOAL D
Compensation Reform

Rationale
Reform can be accomplished within the context of local control.

Teacher pay is, and should be, largely a local issue. Districts should not face state-imposed regulatory obstacles to paying their teachers the way they see fit; different communities have different resources, needs, and priorities. States should remove any obstacles to districts’ autonomy in deciding the terms for teacher compensation packages.

The state can ensure that all teachers are treated fairly by imposing a minimum starting salary for all teachers. However, a state-imposed salary schedule that can lock in pay increases (or the requirement of a uniform salary schedule) deprives districts of the ability to be flexible and responsive to supply and demand problems that they face.

There is an important difference between setting the minimum teacher salary in a state and setting a salary schedule.

What is the difference between establishing a minimum starting salary and a salary schedule? Maine, for example, set a minimum starting salary of $27,000 for its teachers in 2006-07. No district is allowed to pay less. In contrast, Alabama, like many states, has established a salary schedule that lays out what the minimum salary has to be at every level. A teacher who has been teaching four years and has a master’s degree must not be paid less than $42,675. A teacher who has been teaching four years and does not have a master’s degree may not be paid less than $37,109. While most districts exceed the state minimum, setting the salary schedule forces districts to adhere to a compensation system that is primarily based upon experience and degree status, even when they would like to have other options.

▲ BACK to Area 3: Goal D.

AREA 3: GOAL E
Tenure

Rationale
Tenure should be a meaningful milestone in a teacher’s career.

Because of the high turnover rate during the first five years of teaching in many school districts, the decision to give teachers tenure (or permanent status) is often made automatically, with little thought or deliberation put into the decision. Shifting the probationary period to five years could help to improve the quality of the evaluation process, since fewer teachers would be under consideration.

State policy should reflect the fact that “initial” certification is intended to be temporary and probationary, and that tenure is intended to be a significant reward for teachers who have consistently shown commitment and effectiveness. Tenure and advanced certification are not rights implied by the receipt of an initial teaching certificate, yet tenure is often granted automatically, without even a hearing to review a teacher’s performance. No other profession, including higher education, offers practitioners this benefit after only a few years of working in the field.

▲ BACK to Area 3: Goal E.

AREA 4: GOAL A
Entry Into Preparation Programs

Rationale
The best time for assessing basic skills is at program entry.

Basic skills tests were not intended to be licensing tests, but rather to be used at the point of admission into a teacher preparation program. They generally assess middle school-level skills and should be used by the state as a minimal screening mechanism to ensure that teacher preparation programs are not admitting individuals who are not prepared to do college-level work. Admitting aspiring teachers who have not passed these tests may result in programs devoting too much time to remediation.

Screening candidates at program entry protects the public’s investment.

Teacher preparation programs that do not screen candidates, particularly programs at public institutions that are heavily subsidized by states, end up investing considerable taxpayer dollars in the preparation of individuals who may
not be able to successfully complete a program and pass the licensing tests required to become a teacher. It would be far better to require individuals who want to teach to complete remediation as a condition of program entry, avoiding an unsuccessful (but significant) investment of public tax dollars.

▲ BACK to Area 4: Goal A.

Food for Thought

Using testing to expand and restrict the supply of teachers.

Currently, states with basic skills test requirements set a single passing score without regard to the subject areas that aspiring teachers intend to teach. States could consider using these tests to better manage the flow of aspiring teachers into certain subject areas and grade levels. Other countries, such as France, engage in this practice, resetting passing scores on an annual basis. For example, raising the passing scores needed to enter an elementary education program might help to reduce the number of eligible elementary education teachers in excess supply in many states. A neighboring state in need of elementary teachers might keep its scores low to attract candidates. Such policies would also reduce the significant expense that states incur by subsidizing teacher preparation programs that produce teachers in already overcrowded teaching fields.

States might also vary passing scores based on the expected difficulty of the subject area. For example, the state may want to allow a lower passing score on a basic skills test for aspiring early childhood teachers than for aspiring high school physics teachers.

▲ BACK to Area 4: Goal A.

AREA 4: GOAL B
Program Accountability

Rationale

States need to hold programs accountable for the quality of their graduates.

The state should look at a number of factors when approving teacher preparation programs. The quality of both the subject matter preparation (see Goals 1-B and 1-C) and the professional sequence (see Goal 4-D) are crucial. However, in addition to consideration of program content, the measures recommended by NCTQ can provide the state and the public with meaningful, readily understandable indicators of how well programs are doing in what is most important: preparing teachers to be successful in the classroom.

Average scores on basic skills tests of individuals admitted to programs can help the state learn, “Are programs appropriately screening applicants?” Pass-rate data on licensing tests can help answer the question, “Are programs delivering essential academic and professional knowledge?” Classroom performance data and evaluation ratings can help the state find out, “Are programs producing effective classroom teachers?”

Collecting effective pass-rate data on state licensing tests is especially important. Most states are currently failing to meet the spirit of Title II, Section 207 of the Higher Education Act, which requires states to collect pass-rate data and hold approved programs accountable for poor performance. The insufficient response to this law was, until recently, a consequence of its language mandating collection of the licensing test pass rates of program completers. Many teacher preparation programs responded to this language by requiring a passing score on licensing tests in order to complete the program, thus ensuring pass rates of nearly 100 percent. These data consequently gave little meaningful insight into the quality of a program. Only 22 out of more than 1,300 teacher preparation programs nationwide were identified as “low performing” in the 2003-04 academic year.

▲ BACK to Area 4: Goal B.

AREA 4: GOAL C
Program Approval and Accreditation

Rationale

Accreditation is concerned with inputs, how a program achieves quality; state approval of programs should be about outputs.

The recent growth in the popularity of national accreditation has led some states to adopt policies that blur the line between the public process of state program approval and the private process of national accreditation. The factors considered for accreditation are broader and more formative in nature than the factors that should be considered by the state when approving programs. The state’s primary interest is—or should be—narrower, more sharply focused on only those aspects of teacher preparation that directly relate to teacher effectiveness and those measures that can be quantified (see Goals 4-B and 4-D). While both the state and the accrediting body share the same ultimate goal—quality teachers—the questions that each asks differ.

Furthermore, although there may be a growing consensus as to what teachers should know and be able to do—a
consensus that could eventually strengthen the accreditation movement—no single accrediting body has yet to demonstrate its inherent advantage or superiority over any other. There is no solid evidence that nationally accredited teacher preparation programs produce better teachers than unaccredited programs.

Accordingly, states may choose to endorse the standards of national accrediting bodies, but these bodies’ standards should not be seen as adequate substitutes for state program approval standards. Unfortunately, some states have allowed programs to substitute national accreditation for state program approval. A few states have gone further and required that all teacher preparation programs at public universities attain NCATE accreditation. A few more have required that all in-state programs, public and private, attain national accreditation. These policies are inappropriate, since they require that public funds and institutional resources be spent meeting the standards of a private organization that has yet to be recognized as the undisputed guarantor of minimum quality in its field.

▲ BACK to Area 4: Goal C.

AREA 4: GOAL D
Controlling Coursework Creep

Rationale
Most states have programs that demand excessive requirements.

NCTQ’s research shows that there are teacher preparation programs in the majority of states where teacher candidates are required to complete 60 or more credit hours of professional coursework. We found programs in still more states where candidates are required to complete 50 to 59 credit hours of professional coursework. These are excessive requirements that leave little room for electives, and often leave insufficient room for adequate subject matter preparation. Though there is no research data to confirm this, it seems likely that such excessive requirements are likely to discourage talented individuals from pursuing teacher preparation—and public school teaching.

States should only mandate courses or set standards that relate to student achievement, giving programs discretion to determine remaining sequence.

When deciding what courses the state wants to require of aspiring teachers, there is not necessarily a one-to-one correspondence between the goals of teacher preparation programs (or the organizations that accredit them) and the interests of the state. Generally speaking, programs’ concerns are broader and more formative in nature in defining what future teachers should learn and be able to do. The state’s interest is—or should be—narrower, focusing only on that portion of teacher candidates’ preparation that will make them more effective once they reach the classroom.

For example, virtually all teacher preparation programs require that aspiring teachers take “foundations” coursework. This includes courses like “Social Foundations,” “Philosophy of Education,” and “Introduction to American Education.” Programs would probably assert that such coursework is integral to the formation of the future teacher. Yet the connection of foundations coursework to teacher effectiveness and student learning has not been established and is not likely to be—at least not easily.

Foundations coursework is not the only curricular area with a loose connection (at best) to teacher effectiveness. Another area seeks to develop teacher candidates’ understanding of the teaching profession. These courses, which are common in higher-ranking education schools and are often intellectually engaging, deal with social issues related to schools, alternative structures of schools, the politics of education, and other related issues.

Ultimately, though, little about the intentions or nature of these various types of courses suggests that teachers will be more effective in the classroom for having taken them. That’s not to say that they are unimportant, or that programs should be prevented from requiring them. By the same token, however, whether or not they are required should lie outside the realm of state concern, and the state should not deny approval to programs that elect not to require them.

What about the professional sequence is the concern of the state? When approving a program, what evidence should the state seek that would indicate that a program is making every effort to produce effective teachers? The following is not a comprehensive list nor even a suggested list of topics, but it highlights the sort of topics that would enhance teacher effectiveness. Some topics might need more than a single course; other topics might be covered as part of a broader course:

- Important principles generated from the field of cognitive psychology. Many child development and learning theory classes do not teach these established principles well, in spite of course titles to the contrary.
- Types of instruction, lesson planning, classroom management strategies and routines.
- Fundamentals of school law and professional ethics,
particularly with regard to special education.

- The science of reading instruction, including diagnosis and remediation.
- Strategies for teaching children whose native language is not English.
- Recognition and diagnosis of learning disabilities.
- The social and cultural roots of the achievement gap; learning challenges from poverty.
- Methods for teaching subject matter, particularly mathematics.
- Testing in an era of school accountability.

The line between coursework that is formative and coursework that is likely to lead to teacher effectiveness can be blurry. But recognizing that the goals of institutions and those of states are not always the same can help the state to focus on its primary responsibility: producing teachers who can improve student learning.

**States need to establish a cycle for reviewing their coursework requirements.**

States that require all teacher candidates to complete a specific set of professional courses need to review these requirements on an ongoing basis. Many states rarely assess their required coursework sequences and end up only doing so when there is a move to add a new course to the list. States that schedule a comprehensive review of the entire professional sequence on a regular cycle, once every five years for instance, are more apt to weigh the benefit and value that each requirement offers, eliminating requirements that are no longer relevant and ensuring that the state focuses on teacher effectiveness.

**States need to monitor programs’ total professional coursework requirements.**

Although some states specify a reasonable amount of minimum professional coursework that new teachers are required to complete, teacher preparation programs often require far more than the required minimum amount. Requiring that teachers complete a minimum amount of coursework does nothing to ensure that approved programs will limit themselves to the state requirements (nor is it necessarily the case that programs should be limited to these requirements).

As described above, there are programs in most states that require teacher candidates to take two to three times the equivalent of a college major. This problem of “coursework creep” is often even worse in the majority of states that have adopted a “standards-based” approach. This requires teacher candidates to complete a program that meets certain curricular standards, rather than a state-mandated set of coursework requirements. The standards of national accrediting bodies, like minimum coursework requirements, do little to ensure that programs will make it a priority to deliver professional preparation in an efficient manner.

The problem of excessive coursework requirements is rarely, if ever, one that can be laid at the feet of arts and sciences faculty. Education departments decide the professional sequence of coursework that teacher candidates must complete in order to graduate and be recommended for licensure. The problem of coursework creep is often worst in the area of elementary teacher preparation, in which candidates first complete the equivalent of a major in broad professional coursework (e.g., Foundations and Sociology of Education)—and then complete what should be a subject matter major in the education department. At universities around the country, elementary teacher candidates complete coursework taught by education faculty in “Teaching Elementary Math,” “Teaching Elementary Music,” and so on, instead of courses in math and music taught by faculty with scholarly credentials in those fields. The problem of insufficient subject matter preparation (see Goal 1-B) is thus inseparable from the problem of excessive professional coursework. If elementary teacher candidates completed subject matter coursework while preparing to teach subject matter, much of the problem of coursework creep would disappear.

Coursework creep is far less of a problem in secondary teacher preparation than in elementary preparation. Secondary teacher candidates are now required by almost every state to complete a subject matter major or the equivalent, rather than a major in “math education” or “science education.” This much-needed focus on subject matter preparation has placed a check on the amount of professional coursework that programs can require of secondary teacher candidates.

Teacher preparation programs have an inherent financial disincentive to cut down on the number of professional courses that they require of candidates. As such, it is likely that nothing short of state policy can address this problem.

▲ BACK to Area 4: Goal D.
Food for Thought

An alternative to limiting the amount of professional coursework.

If states do not want to place limits on the amount of professional coursework that approved programs may require, they could also address this issue by requiring programs with excessive coursework requirements to show measurably superior results over programs with fewer requirements.

▲ BACK to Area 4: Goal D.

AREA 5: GOAL A

Genuine Alternatives

Rationale

The program must provide practical, meaningful preparation that is sensitive to the stress level of the new teacher.

Too many states have policies requiring alternate route programs to “back-load” large amounts of traditional education coursework, thereby preventing the emergence of real alternatives to traditional preparation. This issue is especially important given the large proportion of alternate route teachers who complete this coursework while teaching. Alternate route teachers often have to deal with the stresses of beginning to teach while also completing required coursework in the evenings and on weekends. States need to be careful to only require participants to meet standards or complete coursework that is practical and immediately helpful to a new teacher.

▲ BACK to Area 5: Goal A.

Food for Thought

State-run programs are not optimal.

Because states do not actually hire and place teachers, states are generally not the optimal choice to actually run alternate route programs. The proper role of the state may be to articulate good alternate route policies and hold districts and programs accountable for meeting them. Since school districts are in the best position to know what kinds of teachers they need to recruit and what kind of curricular training will best serve those teachers, school districts are the optimal providers. States that do run their own alternate route programs should match teacher candidates with specific job openings before candidates begin their pre-service training, at least mitigating the primary weakness of existing state-run programs.

▲ BACK to Area 5: Goal A.

AREA 5: GOAL B

Limiting Alternate Routes to Teachers with Strong Credentials

Rationale

Alternate route teachers need the leg up of a strong academic background.

The intent of alternate-route programs has been to provide a route for persons who already have strong subject matter knowledge to enter the profession, allowing them to focus quickly on gaining the professional skills needed for the classroom. This motivation is based on the fact that academic caliber has been shown to be a strong predictor of classroom success. Programs that admit candidates with both a weak grasp of subject matter and a lack of professional knowledge can put the new teacher in an impossible position, much more likely to experience failure, and perpetuate high attrition rates.

What should be the state’s minimum academic standard?

Assessing a teacher candidate’s college GPA and/or aptitude scores can provide useful and reliable measures of academic caliber, provided that the state does not set the floor too low. A 2.5 minimum grade point average (GPA) of half Bs and half Cs is a popular choice of many alternate route programs but may set the standard somewhat too low. It is about the same as what most teacher prep programs require of traditional candidates. Some programs address this problem by looking for at least a 2.75 in the last 60 hours of college, as indicative of a growing seriousness of purpose on the part of the candidate. GPA measures are especially useful for assessing elementary teacher qualifications since elementary teaching demands a broader body of knowledge that can be harder to define in terms of specific tests or coursework.

Multiple ways for assessing competency are needed for the nontraditional candidate.

Rigid coursework requirements can dissuade talented, qualified individuals who lack precisely the “right” courses from pursuing a career in teaching. States can maintain high standards by allowing individuals to instead prove their
subject matter knowledge by means of appropriate tests. For instance, there should be no coursework obstacles to an engineer who wishes to teach physics, as long as he or she can prove sufficient knowledge of physics on a test. A good test with a sufficiently high passing score is certainly as telling, if not more so, than the courses listed on a transcript.

A testing exemption would also allow alternate routes to recruit college graduates with strong liberal arts backgrounds to work as elementary teachers, even if their transcripts do not exactly meet state requirements.

▲ BACK to Area 5: Goal B.

AREA 5: GOAL C
Program Accountability

Rationale
Alternate route programs should show they consistently produce effective teachers.

All data that is collected on alternate route programs should focus on the central question of whether or not they produce effective teachers. Although there are many components involved in a good alternate route program, the output of productive teachers is the only true indicator of success. The indicators recommended by NCTQ capture a comprehensive vision of teacher effectiveness.

Alternate route programs need to be held as accountable for their results as traditional programs. While the training and time associated with alternate route programs differs substantially from that of traditional programs, the outputs of student learning and teacher effectiveness should be held to an identical standard.

▲ BACK to Area 5: Goal C.

AREA 5: GOAL D
Interstate Portability

Rationale
States can embrace portability without lowering standards.

It is understandable that states are wary of accepting alternate route teachers from other states, since programs vary widely in quality. However, the same wide variety in quality can be found in traditional programs. To decide if a teacher from out of state meets his standards, states often conduct transcript reviews as the only safeguard on quality, oddly enough ignoring the record and performance of the teacher in the classroom. Satisfactory evaluations, evidence of a valid license, and meeting licensing test requirements offer more meaningful indicators of good standing.

Using transcript analysis to judge teacher competency provides little value.

In an attempt to ensure that teachers have the appropriate professional and subject matter knowledge base when granting certification, states often review a teacher’s college transcript, no matter how many years ago a bachelor’s degree may have been earned. A state certification specialist reviews the college transcript, looking for course titles that appear to match existing state requirements. If the right matches are not found, this analysis may then serve as a basis for requiring teachers to complete additional coursework before being granted full standard licensure. This practice even holds true for experienced teachers who are trying to transfer from another state, regardless of how experienced or successful a teacher he or she is. The application of these often complex state rules results in unnecessary obstacles to hiring talented and experienced teachers, with little evidence that the process of reviewing a person’s undergraduate coursework improves the quality of the teaching force or ensures teachers have adequate knowledge.

▲ BACK to Area 5: Goal D.

Food for Thought
Barring the National Teacher of the Year.

Consider the example of Jason Kamras, 2005 National Teacher of the Year. With his unconventional background (he did not major in the subject he teaches), Kamras would likely be barred from teaching in many states. Another example is that of Jeffers Huyck, a Latin teacher with a doctorate in classics who had taught for 22 years when the state of California decided that he needed to meet standard certification requirements. It is unlikely that Huyck, who never completed traditional teacher preparation, would be allowed to teach in most states. States should ensure that unusually talented individuals—especially those with years of teaching experience—are allowed to teach. One way to build this option into policy is to offer teaching licenses to individuals with outstanding accomplishments. States could recognize extraordinary work experience as well as above-average academic qualifications.

▲ BACK to Area 5: Goal D.
AREA 6: GOAL A
Coursework Creep in Special Education

Rationale
Standards need to define the professional knowledge teachers must have to work with students with disabilities.

State standards for the preparation of special education teachers should clearly define what the state expects teachers to know and be able to do. A comprehensive set of standards should address the specific knowledge teachers need in each of four key areas essential to the education of students with disabilities: the legal and historical foundations of special education, instruction, behavior management and assessment. Specificity is key; when the state is not clear about which practices and methods it is expects teachers to know, preparation programs are free to decide in which strategies they will train teacher candidates. Leaving these choices to preparation programs is particularly problematic in special education, because the 2004 authorization of the Individuals with Disabilities Education Act specifically requires the use of research-based practices in special education.

In order to ensure that the state is only licensing teachers that meet its expectations, all standards must be testable. Standards that require an opportunity to observe teachers in action are inappropriate for the purposes of teacher preparation and licensing. Furthermore, many states’ teaching standards are generic in tone and are written for all teachers, regardless of their experience. For state teaching standards to be of any practical use in assessing new teachers, they must be written specifically for the new teacher, with no presumption of experience.

Overly prescriptive teacher preparation programs may be exacerbating state teacher shortages in special education.

The pervasive shortage of special education teachers in the U.S. has many causes; however, the large amount of professional education coursework required of prospective special education teachers is a likely contributor to this ongoing problem.

While more extensive requirements may be appropriate for teachers preparing to work with students with severe disabilities, some states require teachers to complete excessive amounts of professional coursework in order to attain any licensure in special education. State requirements aside, many programs require excessive amounts of coursework of their own volition. Teacher preparation programs have a financial disincentive to deliver coursework efficiently, so it is up to states to monitor programs and ensure that they offer streamlined courses of study. In addition, No Child Left Behind and the recent reauthorization of the Individuals with Disabilities Education Act have placed unprecedented emphasis on special education teachers’ subject matter preparation (see Goals 6-B and 6-C), and efficient program design is imperative for special education teachers to receive the subject matter training they need.

The state needs to establish a review cycle for its own coursework requirements and/or teaching standards.

States that require all teacher candidates to complete a specific set of professional courses need to review these requirements on an ongoing basis. Many states rarely assess their required coursework sequences and end up only doing so when there is a move to add a new course to the list. States that schedule a comprehensive review of the entire professional sequence on a regular cycle, once every five years for instance, are more apt to weigh the benefit and value that each requirement offers, eliminating requirements that are no longer relevant and ensuring that the state focuses on teacher effectiveness.

The state should monitor the number of courses, mandated or not.

Although some states specify a reasonable amount of minimum professional coursework that new teachers are required to complete, teacher preparation programs often require far more than the required minimum amount. Requiring that teachers complete a minimum amount of coursework does nothing to ensure that approved programs will limit themselves to the state requirements (nor is it necessarily the case that programs should be limited to these requirements).

There are programs in most states that require teacher candidates to take two to three times the equivalent of a college major. This problem of “coursework creep” is often even worse in the majority of states that have adopted a “standards-based” approach. This requires teacher candidates to complete a program that meets certain curricular standards, rather than a state-mandated set of coursework requirements. The standards of national accrediting bodies, like minimum coursework requirements, do little to ensure that programs will make it a priority to meet state standards in an efficient manner.
The problem of excessive coursework requirements is rarely, if ever, one that can be laid at the feet of arts and sciences faculty. Education departments decide the professional sequence of coursework that teacher candidates must complete in order to graduate and be recommended for licensure. The problem of coursework creep is often worst in the area of elementary teacher preparation, in which candidates first complete the equivalent of a major in broad professional coursework (e.g., Foundations and Sociology of Education)–and then complete what should be a subject matter major in the education department. At universities around the country, elementary teacher candidates complete coursework taught by education faculty in “Teaching Elementary Math,” “Teaching Elementary Music,” and so on, instead of courses in math and music taught by faculty with scholarly credentials in those fields. The problem of insufficient subject matter preparation (see Goal 1-B) is thus inseparable from the problem of excessive professional coursework. If elementary teacher candidates completed subject matter coursework while preparing to teach subject matter, much of the problem of coursework creep would disappear.

### AREA 6: GOAL B
### Elementary Special Education Teachers

#### Rationale

All teachers, including special education teachers, teach content, and therefore need relevant coursework.

Elementary special education teacher candidates should complete roughly the same core of liberal arts coursework as regular elementary teacher candidates. They will need this same knowledge in the classroom. (See Goal 1-B for further discussion of this issue.) Moreover, from a practical perspective, it is incumbent on teacher preparation programs to produce special education teachers who are highly qualified in the areas they are going to teach.

#### ONE POSSIBLE MODEL

- 3 credit hours of children’s literature;
- 3 credit hours of composition and grammar;
- 6 credit hours of general science (biology, chemistry, physics, earth science);
- 6 credit hours of mathematics, covering foundational topics and geometry, not higher level math courses like calculus;
- 3 credit hours of U.S. history;
- 3 credit hours of ancient history;
- 3 credit hours of world geography;
- 3 credit hours of music appreciation; and
- 3 credit hours of art history.

**Test-out options:** there is no sense in making teachers take coursework when they have already mastered the material.

Some elementary teacher candidates have acquired the knowledge needed to teach elementary grades in their high school coursework and other experiences. There is no need for someone who has passed an Advanced Placement (AP) exam in U.S. History to be required to take a survey course in that subject during college. Nevertheless, to ensure that all teachers, not just some, are broadly educated, states need to provide a vehicle that allows candidates to test out of college coursework requirements.

The current myriad of state licensing tests, including the general testing requirement in No Child Left Behind teacher quality provisions, only provides for a general subject matter test of all elementary teacher candidates. This
test allows candidates who may be weak in one, two, and even three subject areas to still pass. The tests generally have such low minimum scores that someone can miss up to 50 to 75 percent of the questions and still pass. A legitimate “test-out” option requires individual subject matter tests, or at least minimum subscores on a general test. Good policy would also accept equivalent scores from AP and SAT II tests.

\[ \text{BACK to Area 6: Goal B} \]

### AREA 6: GOAL C

**Secondary Special Education Teachers**

**Rationale**

**Conflicting language in IDEA and NCLB has led to much confusion.**

No Child Left Behind (NCLB) and the 2004 reauthorization of the Individuals with Disabilities Education Act (IDEA) present conflicting expectations for the subject matter preparation of new secondary special education teachers. Although IDEA 2004, which was passed after NCLB, lays out greater flexibility and is more realistic than what NCLB suggests, it may not adequately address teachers’ subject matter knowledge. States can provide some middle ground, while meeting the requirements of both laws.

Under IDEA, states can award “highly qualified teacher” status to new secondary special education teachers who:

- Possess a major or have passed a subject matter test in one of three content areas: language arts, mathematics, or science (but without explanation, the law does not include social studies); and
- Complete a single High Objective Uniform State System of Evaluation (HOUSSE) route for multiple subjects in all other subjects that they are likely to teach within their first two years of teaching (see Goal 6-C).

States need to provide more specific guidance on this issue. They should require secondary special education teachers to have broad coursework in multiple subjects and to become highly qualified in two core academic areas. This will make teachers more flexible and thus better able to serve schools and students. States can use a combination of testing and coursework to meet this goal. For an example of how an institution could prepare more flexible teachers, see Food For Thought.

**Secondary special education teachers need to graduate highly qualified in two subject areas.**

Given that these teachers will be expected to complete a HOUSSE route in all remaining subject areas during their first two years of teaching, it makes sense for them to complete undergraduate training in two related areas, probably either math and science or English and social studies. That way, the HOUSSE route can focus on related subject areas and candidates can focus on related fields, rather than studying up on English, history, and mathematics, for example, in their first two years of teaching.

\[ \text{BACK to Area 6: Goal C} \]

**Food for Thought**

**One model for how an institution might prepare special education teacher candidates.**

Here is one model for how an institution might prepare secondary special education teacher candidates to be highly qualified in two subject areas and provide broad preparation in all core academic subjects:

- A minor in *mathematics* with a licensing test in mathematics (15 credits): meets HQT;
- A minor in *general science* with a licensing test in science (15 credits): meets HQT;
- A survey course in American history (3 credits);
- Two survey courses in world history (including ancient history) (6 credits);
- An American literature class (3 credits);
- A British literature class (3 credits); and
- A world literature class (3 credits).

This scenario would require 45-48 credit hours of academic content coursework. Much of this coursework would also fulfill institutions’ general education requirements.

\[ \text{BACK to Area 6: Goal C} \]

### AREA 6: GOAL D

**Special Education Teachers and HQT**

**Rationale**

The needs of special education teachers, new or veteran, are different from most other teachers needing to earn highly qualified status.

Special education teachers face unique pressures, as they must be competent in both the subject areas they teach and in the strategies for teaching children with a variety of special needs. The 2004 reauthorization of the Individuals with Disabilities Education Act recognized these pressures in its proviso allowing new secondary special education teachers to use states’ HOUSSE routes to become “highly
qualified,” a route normally reserved for veteran teachers.

There are several problems common to most states’ traditional HOUSSE routes that make them inappropriate for new secondary special education teachers. First, most state plans are weak on teacher content preparation even though the Congressional intent of the HOUSSE was to address weak subject matter knowledge. Second, in order for teachers to achieve highly qualified status, states place a lot of value on experience—which, of course, a new teacher does not have (see Goal 1-D). Third, state requirements tend to be inordinately complicated, making it hard on a new teacher to figure out how to navigate the system to earn the required credential.

Providing a HOUSSE option to special education teachers was originally envisioned as a way to streamline the process of achieving highly qualified teacher status for teachers who must instruct in multiple subject areas each day. While it is certainly important that a secondary special education teacher has a basic competency in subject matter ranging from mathematics to world history, it is unreasonable to expect this teacher to hold multiple college degrees or pass four or five different content examinations in order to be deemed highly qualified.

The special education HOUSSE route needs to be clear and meaningful.

States can help new secondary special education teachers become highly qualified in multiple subjects by encouraging them to pursue professional development and coursework that is focused on state’s student learning standards. Having available adapted subject matter tests would also add some much-needed flexibility.

Structured properly, HOUSSE would offer an efficient means by which a teacher could get a broad overview of a specific area of content knowledge. One clear option would be for a state to identify focused, content-driven university courses that would provide each teacher with a survey of the information necessary to teach in a given subject area. A single world history course could provide a sufficient basis in social studies; a single quantitative reasoning course could give a broad review of mathematical concepts. This class may not provide expertise, but it could provide the proficiency needed for a teacher to obtain highly qualified teacher status in the subject.

Food for Thought
An illustration of the problems that a new special education teacher faces.

To illustrate the problems that a new special education teacher faces when trying to achieve “highly qualified teacher” status, it may be helpful to look at a specific state’s requirement, typical of what most teachers would be asked to do.

In Massachusetts, teachers who want to use the HOUSSE option need to have an approved Individual Professional Development Plan (IPDP) that has a total of 120 PDPs (Professional Development Activities) which are doled out for various professional activities that a teacher might complete. The very terms used here illustrate the jargon-heavy nature of most current HOUSSE processes.

Every PDP earned by a new teacher has to be awarded by a registered provider: the Department of Education, a school district or “educational collaboratives.” Accordingly, these groups are each responsible for creating an “appropriate end-of-course assessment” for any sponsored activity.

And what are these activities? A teacher in question might first attend four 10-hour professional development programs sponsored by the Department of Education, worth 60 PDPs. Since these programs can be in either “content or pedagogy related to the content of the core academic subjects,” they might include “Theme Based Science Units” or “Teaching Geometry Through Art.” Next, the teacher might clock 10 hours of inservice time sponsored by the district, worth 10 PDPs. That might be followed by making a presentation at a professional conference, worth 30 PDPs. Again, there’s no requirement that the activity improve teacher knowledge of subject matter. Finally, the teacher might earn the last 20 PDPs by spending 20 hours involved in the school-based implementation of “an activity for students, parents or teachers that incorporates the learning standards of the curriculum framework.” Confusing? Yes. Meaningful? Most likely not.

After these professional development hours, inservice hours, conference presentations, and school-based activities, the teacher would make sure to submit to his district his completed Individual Professional Development Plan, with documentation of each PDP earned.

Contrast what this Massachusetts teacher had to do with what the state could require. Even just a cursory exploration of college and university schedules for Spring 2007.
shows that a teacher could enroll in “World Civilization II” or “U.S. History I” at Bunker Hill Community College; a teacher living on the other side of the state might enroll in these same classes at Berkshire Community College. These courses are offered in the evenings and would give a teacher familiarity with both the process of historical inquiry and an outline of modern history.

In terms of mathematics, arguably the most specialized of the content areas, the University of Massachusetts at Amherst offers “Math 100: Basic Math Skills for the Modern World,” while the University of Massachusetts at Boston offers “Quantitative Reasoning.” Each of these classes is again offered in the evening and would give teachers a broad exposure to basic mathematical concepts.

This current incarnation of HOUSSE bogs teachers down in distracting bureaucratic tasks while doing little to ensure that they receive an overview of basic content knowledge.
