Each school day, 55 million children and 7 million adults—that’s 20% of the total U.S. population and 98% of all children—spend their workdays inside school buildings. Unfortunately, too many of our nation’s 125,000 public and private K-12 schools are “unhealthy” buildings that can harm their health and hinder learning. Today, clear and convincing research shows that improving specific factors such as school indoor environmental quality improves attendance, academic performance, and productivity.

About children
Children are more vulnerable than adults to environmental hazards because they’re smaller, have developing organs, and breathe more air per pound of body weight. They cannot identify hazards. Adverse exposures and injuries during childhood may have a lifetime impact. See www.epa.gov/children

School factors affecting health
Many school environmental factors can affect the health of children and employees. Too many schools are sited near industrial plants or toxic waste sites; some are sited on abandoned landfills. Many school facilities are poorly maintained. Schools are more densely occupied and more intensively used than office buildings, magnifying problems. Thousands of schools are severely overcrowded, which compromises ventilation systems, acoustics, food service, recess, and sanitation and lavatories. Children also spend extra hours in vehicles or buses when their schools are beyond safe walking and biking distances.

The U.S. EPA has estimated that up to half of all schools have problems with indoor environmental quality. Children and staff are all affected by:
- polluted indoor air and outdoor air
- toxic chemical and pesticide use; chemical spills
- mold infestations
- asbestos, radon
- lead in paint and drinking water
- inadequate chemical management
- poor siting, design
- hazardous materials purchased and stored onsite
- heavy metals and other toxics, such as mercury, CCA, PCBs

Results of unhealthy schools:
- 60% of all children endure health and learning problems due SOLELY to the conditions of their schools.
- child and staff poor health and absenteeism
- asthma, allergies, headaches, fatigue, nausea, rashes and chronic illnesses
- Sick Building Syndrome/Building Related Illness
- more medication use by children and staff
- learning and behavior difficulties
- greater liability for school districts
- lower achievement,

And, reduced revenues due to poor attendance.

Asthma is the leading cause of absenteeism from chronic illness. Asthma is also a leading work-related disease of teachers and custodians—they get it on the job.

Coalition Position
When the nation is committed to raising academic performance and honoring each child’s potential, and to improving the environment of every neighborhood, we have a moral obligation to protect all children and to accommodate children who already have impairments, and personnel. To promote child and adult health, improve education, and create healthier communities, all schools should:
- adopt high performance design and siting standards
- promote and sustain quality indoor air
- use safer cleaning and maintenance products
- use non-toxic products for instruction
- use integrated pest control and weed control
- provide quality lighting, including daylighting
- provide good acoustics and noise control
- select durable, easy-to-clean flooring
- offer wholesome food and exercise opportunities
- provide safe spaces for outdoor activities
- build or retrofit facilities for energy and other resource efficiencies
- remediate lead, CCA, PCBs, mold infestations, and clean out old chemicals.

A powerful array of groups support new policies and actions to ensure all schools are environmentally safe and healthy, including parents, unions, educators, health and environment groups, and advocates for the millions of students in special education programs.
For children, for health, for environment, for education, and for communities, we support:

- The President's FFY 11 Budget for EPA's Healthy Schools Initiative
- Full staffing and resources for U.S. EPA children’s health protection and schools programs (at greater than FFY 06 levels)
- Full funding and staffing for federal agencies to coordinate federal strategy to address healthy school environments (CDC, EPA, Education, Energy, Labor, Homeland Security), including high performance school design, siting, construction, and the greening of schools with preventive maintenance (IAQ, IPM, green cleaning, and more)
  - Fund and reauthorize the Healthy High Performance Schools (Subtitle E) of the Energy Independence and Security Act of 2007 that directs EPA to create new guidelines for school environmental health programs (siting, IAQ, IPM, PCBs, building inspections).
  - Fund the Healthy and High Performance Schools Act in No Child Left Behind that authorizes Education, advised by EPA and Energy, to co-develop state grant programs on high performance school design.
- Fund school construction/renovation and urgent repairs, consistent with enacted laws promoting healthy school environments.

State and Local Policy

- Promote, adopt, fund, and implement healthy, high performance school facility design. Factors include: facility oversight and siting; adequate, safe space for outdoor activities; low-emission construction materials; pollutant source controls; ventilation; durable and easy-to-clean surfaces and floors; moisture and mold controls; temperature and humidity controls; acoustics and noise controls; ergonomics; safety and security; daylighting (maximizing natural light); and energy conservation.
- Promote, adopt, and fund standards and programs to promote use of environmentally preferable materials for school construction, instruction, maintenance, and cleaning, such as integrated pest management (IPM) and certified green cleaning products.
- Support and promote state programs to reduce use or storage of toxic chemicals, such as mercury, pesticides and solvents. RemEDIATE hazards such as PCBs, asbestos, and lead in drinking water.
- Ensure that parents and employees have an active “right to know” about hazards.
- Ensure that all facilities are fully accessible to students and employees with asthma and environmental, learning, and physical disabilities and do no further harm their health.
