Question: How effective is drug testing in school?

Summary of Findings:

In 2002, the United States Supreme Court confirmed that in the school’s role of in loco parentis, drug testing of students who were involved in athletics and extracurricular activities was constitutional. In a state of the union address, George W. Bush stated that drug testing in schools had been effective and was part of “our aggressive community-based strategy to reduce demand for illegal drugs” (Let the love flow: Student drug testing). In an effort to help inhibit and dissuade drug use, Federal funding has been made available to help schools pay for drug testing, which depending on the type of test used, can range from $20-$60 per student. The results of drug testing programs at best, are mixed. According to some research: the “strongest predictor of student drug use is the student’s attitudes toward use and perceptions of peer use” (Largest ever federally–funded study of student drug testing shows it does not deter drug use among teens); at a school with a mandatory drug testing program, the use of drugs, but not alcohol, was lower; and there was no association between school-based drug testing and students’ reports of drug use. According to the majority of literature in this field, the primary purpose of drug testing is “…to deter use and guide those who test positive into counseling or treatment” (Drug testing in schools). The American Academy of Pediatrics has trepidations about drug testing adolescents at school or home. They highly recommend that instead of punitive measures, there be more adequate resources for assessment, treatment and earlier rehabilitation measures. It was also recommended that schools look for signs of drug use in their students in areas such as truancy, erratic behavior and failing grades. It was found that students who are involved in extracurricular activities and were not using drugs and/or alcohol tended to support drug testing programs.

To test or not to test? Each side has their own perspective. The risks of testing include:

http://www.educationpartnerships.org/
creating an environment of distrust
being invasive as well as embarrassing
having student/teacher relationships that can become distrustful
guarding the school’s legal liability
having a false positive result
lacking 100% accuracy
protecting the tested student’s confidentiality
challenging students to try drugs
cheating on drug tests so those with serious drug problems are not identified

The benefits of testing include:
alerting parents early to potential problems
giving students a good reason to say “No” to peers about taking drugs
increasing the number of students screened
encouraging students not to do drugs and/or alcohol for fear of being tested
providing support and education to students early
creating a safe environment

Determining if there should be a drug testing program is a complex and complicated process. If a school decides to do drug testing, it was highly recommended that it should be a component of a total program to reduce students’ use of drugs. Aspects to consider when determining the type of program that should be implemented include:

- involving all stakeholders and listening to all perspectives
- ascertaining if there is a need for testing. This can be done through conducting surveys, using reports by teachers and staff about drug use, and/or determining what drug paraphernalia, etc. has been found at school and surrounding neighborhoods
- checking with the district’s attorney regarding legal rights and procedures
- deciding for what drugs and/or alcohol will be tested and what test(s) will be used
- determining:
  - which students would/should be tested?
  - who will conduct the tests?
  - how will the tests be verified?
  - what will the consequences be?
- how will the tests be paid for?
- who will see the results?
- how will parents be contacted?
- what if a student refuses to be tested?
- how will a student contest test results?
