Research Brief
Needs Assessment

Question: What are the purposes of a needs assessment?

Summary of Findings:
Since implementing NCLB (No Child Left Behind), raising of test scores and making AYP (Adequate Yearly Progress) have been paramount in the schools and the search has been on to find “THE” answer in the schools’ quest to attain these goals. When hunting for appropriate methods to reach these objectives, needs assessments are often designed in hopes of gaining information, often about what is not working. Prior to sending out a needs assessment, there are several questions to consider:

• What information is needed/wanted?
• What is/are the purpose(s) for a change?
• What is/are appropriate strategies and/or instruments to utilize in order to obtain valid and reliable data?
• Is the data being collected both objective (i.e. test scores) and subjective (i.e. surveys, opinionaires)?
• How is/are data currently being used to inform the instructional program? How will this information be used to bring about change?
• How trained are teachers in interpreting, using and evaluating the data?
• What are the barriers to accessing the data?
• What are the attitudes of the staff regarding the use of data and to change?
• What will the staff be expected to do and deliver?

Making change for the sake of change is ineffective, which has been proven repeatedly. In establishing a workable plan to ascertain how effective programs are and where the matches and gaps are, it is highly recommended that the stakeholders have input into it. In devising a needs assessment, it is suggested that the school work with an expert in the field who is well-versed in designing effective instruments. In order to effect substantive and meaningful change, the following steps are advised:

• Identify the goals and objectives of the program
• Prioritize the goals and objectives
• Assess the actual status of the program
• Research and design an appropriate assessment tool/strategy
• Distribute and collect the data
• Evaluate the data
• Examine the discrepancies
• Prioritize the needs that emerged from the data
• Establish a realistic plan that includes a timeline, budget, responsibilities and assessment
• Provide time for on-going staff development to help staff better interpret and utilize the data
• Reassess, readjust as necessary, continue plan implementation

Online Resources:

• Data 101: Going back to school
  A description of what information a teacher and district need to have in order to access data then correctly interpret it in order to use it effectively is provided in this article.
