## Statistical Report

# Validity of the SAT for Predicting First-Year Grades: 2008 SAT Validity Sample 

Brian F. Patterson \& Krista D. Mattern

The College Board

The College Board
New York, NY

## Executive Summary

The College Board formed a research consortium with four-year colleges and universities to build a national higher education database with the primary goal of validating the revised SAT, which consists of critical reading (SAT-CR), mathematics (SAT-M) and writing (SAT-W) for use in college admission. The first sample examined was the first-time, first-year students entering college in fall 2006, with 110 institutions providing students' first-year coursework, grades, and retention to the second-year. Results from the initial research were presented in Kobrin, et al. (2008) and Mattern, et al. (2008). The following year, previously participating as well as new colleges and universities were invited to provide first-year performance data on the first-time, first-year students that began in the fall of 2007 and all analyses were replicated with that cohort (Patterson, Mattern \& Kobrin, 2009). The results were very consistent from the previous year. Additionally, a third cohort of data has been collected for students entering college in fall 2008.

This report presents the findings from a replication of the Kobrin, et al. (2008), Mattern, et al. (2008), and Patterson, et al. (2009) reports based on the 2008 cohort. For the 2008 sample, a total of 70 of the original 110 institutions and 59 new institutions provided data. The 129 institutions in the 2008 sample contained 246,652 students. Please see Appendix A for a list of participating institutions. Students who were missing at least one of the following were excluded from the analyses: SAT scores, a self-reported high school grade point average (HSGPA), and a valid first-year GPA (FYGPA); this resulted in a final sample size of 173,963.

The findings for the 2008 sample are largely consistent with the previous reports. SAT scores were found to be correlated with FYGPA ( $r=0.54$ ), with a magnitude similar to HSGPA ( $r=0.56$ ). The best set of predictors of FYGPA remains SAT scores and HSGPA ( $r$ $=0.63$ ), as the addition of the SAT sections to the correlation of HSGPA alone with FYGPA leads to a substantial improvement in prediction ( $\Delta r=0.07$ ). This finding was consistent across all subgroups of the sample, by both institutional characteristics and demographics ( $\Delta r \geq 0.06$ ). All correlations presented here have been corrected for restriction of range, but the same basic patterns hold for the raw correlations.

Table 1
Institutional Characteristics

| Institutional Characteristic |  | \% |
| :--- | :--- | :---: |
| U.S. Region | Midwest | 17 |
|  | Mid-Atlantic | 22 |
|  | New England | 15 |
|  | South | 14 |
|  | Southwest | 11 |
|  | West | 21 |
| Control | Public | 44 |
|  | Private | 56 |
| Admittance | Under 50\% | 21 |
| Rate | 50 to 75\% | 57 |
|  | Over 75\% | 22 |
| Undergraduate | Small | 20 |
| Enrollment | Medium | 42 |
|  | Large | 16 |
|  | Very large | 22 |

Note. K = number of institutions $=129$. Percentages may not sum to 100 due to rounding. Institution sizes were categorized by the number of undergraduates as follows: small $=750$ to 1,999 ; medium $=2,000$ to 7,499 ; large $=7,500$ to 14,999 ; and very large $=15,000$ or more .

- The sample of 129 institutions was diverse with respect to region of the U.S., control, size, and selectivity.

Table 2
Descriptive Statistics on the Total Sample

| Variable | Mean | SD |
| :--- | :---: | :---: |
| HSGPA | 3.60 | 0.49 |
| SAT-CR | 554 | 94.0 |
| SAT-M | 573 | 95.8 |
| SAT-W | 548 | 94.3 |
| FYGPA | 2.98 | 0.71 |

Note. $\quad \mathrm{N}=$ number of students $=173,963$.

- The 2008 sample performed very similarly to the previous samples in terms of mean HSGPA, SAT scores, and FYGPA (Kobrin, et al., 2008 and Patterson, et al., 2009).
- Similar to the previous reports, the 2008 sample outperformed the 2008 graduating seniors, whose mean SAT-CR, SAT-M and SAT-W were 502, 515, and 494, respectively, (College Board, 2008).

Table 3
Corrected (Raw) Correlation Matrix of SAT, HSGPA, and FYGPA

| Variable | HSGPA | SAT-CR | SAT-M | SAT-W | FYGPA |
| ---: | :---: | :---: | :---: | :---: | :---: |
| HSGPA |  | 0.45 | 0.48 | 0.48 | 0.56 |
| SAT-CR | $(0.21)$ |  | 0.71 | 0.84 | 0.48 |
| SAT-M | $(0.24)$ | $(0.50)$ |  | 0.72 | 0.48 |
| SAT-W | $(0.24)$ | $(0.71)$ | $(0.51)$ |  | 0.52 |
| FYGPA | $(0.37)$ | $(0.29)$ | $(0.28)$ | $(0.35)$ |  |

Note. $\quad \mathrm{N}=173,963$. Pooled within-institution, restriction of range corrected correlations are presented. The raw correlations are shown in parentheses.

- The correlations between all predictors were similar to the previous reports (Kobrin, et al., 2008 and Patterson, et al., 2009).

Table 4
Corrected (Raw) Correlations of Predictors with FYGPA

| Predictor(s) | Correlation |
| :--- | :---: |
| 1. HSGPA | $0.56(0.37)$ |
| 2. SAT-CR | $0.48(0.29)$ |
| 3. SAT-M | $0.48(0.28)$ |
| 4. SAT-W | $0.52(0.35)$ |
| 5. SAT-M, SAT-CR | $0.52(0.33)$ |
| 6. HSGPA, SAT-M, SAT-CR | $0.62(0.45)$ |
| 7. SAT-CR, SAT-M, SAT-W | $0.54(0.37)$ |
| 8. HSGPA, SAT-CR, SAT-M, SAT-W | $0.63(0.47)$ |
| Note. $\quad$ N = 173,963. Pooled within-institution, restriction of range corrected correlations are presented. The |  |
| raw correlations are shown in parentheses. |  |

- The raw and corrected correlations of SAT scores and HSGPA with FYGPA among the 2008 sample are similar to results for the 2007 and 2006 cohorts.
- As was found in the previous samples, the SAT writing section has the highest correlation with FYGPA among the three sections (0.52).
- The corrected correlation of SAT scores and FYGPA (0.54) is similar to the correlation of HSGPA and FYGPA (0.56).
- Similar to previous results, the increment in predictive validity attributable to SAT scores over HSGPA is 0.07 .

Figure 1 Mean FYGPA by SAT Score Band

SAT Score Band

Note. SAT score bands based on the sum of SAT-CR, SAT-M, and SAT-W. Sample sizes by SAT score band were as follows:

| SAT | $\mathbf{n}$ |
| :--- | :--- |
| $600-1190$ | 5,107 |
| $1200-1490$ | 37,289 |
| $1500-1790$ | 74,927 |
| $1800-2090$ | 48,572 |
| $2100-2400$ | 8,068 |

- Figure 1 presents the mean FYGPA of students by SAT score band. This graphically demonstrates the strong positive relationship between SAT scores and FYGPA.

Figure 2
Percent of Students Earning a FYGPA of a B or Higher by SAT Score Band

SAT Score Band

Note. SAT score bands based on the sum of SAT-CR, SAT-M, and SAT-W.
Students with FYGPAs $\geq 3.00$ were considered to have earned a B or better.
Sample sizes by SAT score band were as follows:

| SAT | $\mathbf{n}$ |
| :--- | :--- |
| $600-1190$ | 5,107 |
| $1200-1490$ | 37,289 |
| $1500-1790$ | 74,927 |
| $1800-2090$ | 48,572 |
| $2100-2400$ | 8,068 |

- Figure 2 presents the percent of students who had a FYGPA of B (3.0) or higher by SAT score band and again the strong positive relationship between SAT scores and firstyear college performance is evident.

Figure 3 Incremental Validity of the SAT: Mean FYGPA by SAT Score Band Controlling for HSGPA

Note. SAT score bands based on the sum of SAT-CR, SAT-M, and SAT-W.
HSGPA ranges were defined as follows:
"A" range: $\quad 4.33(\mathrm{~A}+), 4.00(\mathrm{~A})$, and $3.67(\mathrm{~A}-)$;
"B" range: $\quad 3.33(\mathrm{~B}+), 3.00(\mathrm{~B})$, and $2.67(\mathrm{~B}-)$; and
"C or Lower" range: $2.33(\mathrm{C}+)$ and lower.
Sample sizes by SAT score band were as follows:

| SAT | C or Lower | B | A |
| :--- | :--- | :--- | :--- |
| $600-1190$ | 845 | 3,135 | 1,127 |
| $1200-1490$ | 2,003 | 20,423 | 14,863 |
| $1500-1790$ | 1,181 | 27,163 | 46,583 |
| $1800-2090$ | 223 | 9,378 | 38,971 |
| $2100-2400$ | $13^{*}$ | 697 | 7,358 |

*: $\quad 13$ students with HSGPA of C or lower and SAT of 2100-2400 were excluded for failing to meet the minimum sample size of 15 .

- Figure 3 presents students' mean FYGPA by SAT score band, controlling for HSGPA, graphically demonstrating the unique information provided by SAT, controlling for HSGPA. Even within HSGPA levels, there is still a strong positive relationship between SAT and FYGPA. For example, of the students with a HSGPA equivalent to an A, those with an SAT total score between 600 to 1190 had a mean FYGPA of 2.5 as compared to a mean FYGPA of 3.6 for students with an SAT total score between 2100 and 2400.

Table 5
Descriptive Statistics of Study Variables by Institutional Characteristics

| Institutional Characteristic |  | k | n | SAT-CR |  | SAT-M |  | SAT-W |  | HSGPA |  | FYGPA |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Mean |  | SD | Mean | SD | Mean | SD | Mean | SD | Mean | SD |
| Control | Private |  | 72 | 47,722 | 578 | 95.0 | 591 | 95.4 | 577 | 95.9 | 3.63 | 0.48 | 3.12 | 0.59 |
|  | Public | 57 | 126,241 | 545 | 92.0 | 566 | 95.1 | 537 | 91.4 | 3.59 | 0.50 | 2.93 | 0.75 |
| Admittance | Under 50\% | 27 | 33,549 | 602 | 90.6 | 621 | 90.8 | 602 | 92.4 | 3.77 | 0.41 | 3.20 | 0.55 |
| Rate | 50 to 75\% | 73 | 114,619 | 548 | 89.7 | 569 | 92.0 | 542 | 89.0 | 3.60 | 0.48 | 2.96 | 0.72 |
|  | Over 75\% | 29 | 25,795 | 514 | 91.5 | 527 | 92.0 | 506 | 88.9 | 3.40 | 0.55 | 2.81 | 0.82 |
| Undergraduate | Small | 26 | 7,044 | 549 | 108.1 | 549 | 105.3 | 543 | 106.7 | 3.46 | 0.57 | 2.95 | 0.70 |
| Enrollment | Medium | 54 | 33,452 | 550 | 99.0 | 561 | 100.0 | 547 | 99.9 | 3.54 | 0.53 | 3.02 | 0.71 |
|  | Large | 20 | 33,143 | 551 | 96.0 | 569 | 98.3 | 545 | 96.2 | 3.54 | 0.51 | 2.92 | 0.74 |
|  | Very large | 29 | 100,324 | 556 | 90.5 | 580 | 92.1 | 550 | 90.7 | 3.65 | 0.46 | 2.99 | 0.71 |
| Total |  | 129 | 173,963 | 554 | 94.0 | 573 | 95.8 | 548 | 94.3 | 3.60 | 0.49 | 2.98 | 0.71 |

Note. k = number of institutions, $\mathrm{n}=$ subgroup sample size.

- Students at private institutions had higher mean SAT scores, HSGPA and FYGPA than those from public institutions.
- Students' mean SAT scores, HSGPA, and FYGPA increased as institutional selectivity increased (i.e., as admittance rate decreased).
- Students attending very large institutions tended to have the highest mean SAT scores, HSGPA, and FYGPA compared to smaller institutions, with the exception of mean FYGPA for students attending medium sized and very large institutions, with means of 3.02 and 2.99 , respectively.

Table 6
Corrected Correlations of SAT and HSGPA with FYGPA by Institutional Characteristics

| Institutional Characteristic | $\mathbf{k}$ | $\mathbf{n}$ | SAT-CR | SAT-M | SAT-W | SAT $^{*}$ | HSGPA | SAT*, HSGPA |  |
| :--- | :--- | :--- | ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Control | Private | 72 | 47,722 | 0.52 | 0.52 | 0.56 | 0.59 | 0.58 | 0.67 |
|  | Public | 57 | 126,241 | 0.46 | 0.47 | 0.51 | 0.53 | 0.55 | 0.62 |
| Admittance | Under $50 \%$ | 27 | 33,549 | 0.53 | 0.53 | 0.57 | 0.60 | 0.55 | 0.66 |
| Rate | 50 to $75 \%$ | 73 | 114,619 | 0.47 | 0.47 | 0.51 | 0.53 | 0.56 | 0.63 |
|  | Over $75 \%$ | 29 | 25,795 | 0.45 | 0.46 | 0.49 | 0.52 | 0.55 | 0.61 |
| Undergraduate | Small | 26 | 7,044 | 0.51 | 0.52 | 0.56 | 0.59 | 0.58 | 0.67 |
| Enrollment | Medium | 54 | 33,452 | 0.49 | 0.48 | 0.53 | 0.55 | 0.57 | 0.65 |
|  | Large | 20 | 33,143 | 0.47 | 0.47 | 0.51 | 0.53 | 0.56 | 0.63 |
|  | Very large | 29 | 100,324 | 0.48 | 0.48 | 0.52 | 0.54 | 0.55 | 0.62 |
| Overall |  | 129 | 173,963 | 0.48 | 0.48 | 0.52 | 0.54 | 0.56 | 0.63 |

Note. The correlations were corrected for restriction of range within institutions and pooled. Institution sizes were categorized by the number of undergraduates as follows: small $=750$ to 1,999 ; medium $=2,000$ to 7,499 ; large $=7,500$ to 14,999 ; and very large $=15,000$ or more .
$\mathrm{k}=$ number of institutions, $\mathrm{n}=$ subgroup sample size.

* SAT refers to the inclusion of all three sections in the relevant multiple correlation.
- The correlation of scores on each SAT section with FYGPA was generally:
- slightly higher in private institutions compared to public institutions;
- higher in more selective institutions (those admitting fewer than half of applicants) compared to those that admit at least half of applicants; and
- higher in small institutions compared to larger institutions.
- The same pattern emerges for the correlations of HSGPA with FYGPA, albeit with smaller differences among institutions with varying characteristics.
- Across these three institutional characteristics, the addition of the SAT sections to the correlation of HSGPA alone with FYGPA leads to a substantial, consistent increase ( $\Delta r \geq 0.06$ ).
- For correlations by institutional characteristics that have not been corrected for restriction of range, see Appendix B.

Table 7
Descriptive Statistics of Study Variables by Student Characteristics

| Student Characteristic |  | n | SAT-CR |  | SAT-M |  | SAT-W |  | HSGPA |  | FYGPA |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Graduate Degree | 55,475 | 586 | 90.2 | 603 | 90.7 | 582 | 90.6 | 3.65 | 0.47 | 3.12 | 0.65 |
|  | No Response | 9,777 | 547 | 103.3 | 571 | 104.3 | 544 | 104.1 | 3.55 | 0.51 | 2.96 | 0.72 |
| Total |  | 173,963 | 554 | 94.0 | 573 | 95.8 | 548 | 94.3 | 3.60 | 0.49 | 2.98 | 0.71 |

[^0]- The descriptive statistics are largely similar to previous findings (Mattern, et al., 2008 and Patterson, et al., 2009):
- Males had higher SAT-CR and SAT-M scores whereas females had higher SAT-W scores, HSGPA, and FYGPA.
- Asian and White students outperformed Hispanic, Black and American Indian students on all academic measures.
- Students whose best spoken language was a language other than English had higher SAT-M scores and lower SAT-CR and SAT-W scores relative to the other two best language subgroups.
- As parental income and education level increase, so did mean performance on all academic indicators. The one exception was HSGPA, where there was very little variability in performance across parental income bands. Because HSGPA is not a standardized measure of performance across high schools in the U.S., these results are not surprising given that high schools vary in terms of the mean family income of their student body.
- As highest parental education level increased, so did performance on all academic measures (i.e., SAT, HSGPA, FYGPA).

Table 8
Corrected Correlation of SAT Scores and HSGPA with FYGPA by Student Subgroups

| Student Characteristic |  | k | n | SAT-CR | SAT-M | SAT-W | SAT* | HSGPA | SAT*, HSGPA |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Gender | Male | 125 | 79,233 | 0.46 | 0.47 | 0.49 | 0.52 | 0.54 | 0.61 |

| Overall |  | 129 | 173,963 | 0.48 | 0.48 | 0.52 | 0.54 | 0.56 | 0.63 |

Note. The correlations were corrected for restriction of range within institutions and pooled. Computations were made within institutions for subgroups with at least 15 members. $\mathrm{k}=$ number of institutions, $\mathrm{n}=$ subgroup sample size.

* SAT refers to the inclusion of all three sections in the relevant multiple correlation.
- Overall, SAT scores and HSGPA are approximately equally predictive of FYGPA, with corrected correlations of 0.54 and 0.56 , respectively. Within subgroups, SAT scores were more predictive of FYGPA as HSGPA for females, African American students, American Indian students, Hispanic students, students whose best language was English and another language, and students whose highest parental education level was less than a high school diploma. On the other hand, HSGPA was more predictive of FYGPA than SAT scores for males, Asian students, White students, students whose best language was English only or another language alone, and for each level of household income and for highest parental education level above high school diploma only.
- Similar to previous results (Mattern, et al., 2008 and Patterson, et al., 2009), of the three SAT sections, SAT-W scores were most predictive of FYGPA, overall and for all subgroups, except for Asian students, students whose best language was another language, and students whose highest parental education level was less than a high school diploma, where SATM was slightly more predictive.
- For correlations by student characteristics that have not been corrected for restriction of range, see Appendix C.

Table 9
Average Over-prediction (-) and Under-prediction (+) of FYGPA for SAT Scores and HSGPA (Raw FYGPA)

| Student Characteristic |  | k | n | SAT-CR | SAT-M | SAT-W | SAT* | HSGPA | SAT*, HSGPA |

|  | Not Stated | 129 | 9,777 | -0.01 | -0.02 | -0.01 | 0.00 | -0.01 | 0.01 |
| Overall |  | 129 | 173,963 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

Note. k = number of institutions, $\mathrm{n}=$ subgroup sample size. Negative and positive values indicate over- and under-prediction, respectively. FYGPA regressions were estimated for each institution separately. Residuals were the difference of predicted and observed raw FYGPA.

* SAT refers to all three sections being entered as separate predictor.
- Similar to previous findings (Mattern, et al., 2008 and Patterson, et al., 2009), SAT scores over-predicted FYGPA for males and under-predicted FYGPA for females. The same pattern of results was found for HSGPA, however, with smaller absolute prediction error.
- SAT scores and HSGPA both over-predicted FYGPA for African American, American Indian, and Hispanic students; however, the use of SAT scores resulted in less prediction error than HSGPA for all ethnic subgroups and the combination of SAT scores and HSGPA as predictors resulted in the least amount of prediction error.
- Relative to HSGPA, the use of SAT scores resulted in less prediction error for students who best language was English only and English and another language, but resulted in greater prediction error for students whose best language was another language.
- When considering differential prediction by household income, using SAT alone yielded substantially smaller prediction error than using either only HSGPA or both SAT and HSGPA. Additionally, HSGPA, and to a lesser extent SAT scores, over-predicted FYGPA for low income students ( $<\$ 40,000$ ).
- Similar to the results by household income, analysis of highest parental education level revealed that the prediction error associated with using only SAT to predict FYGPA was smaller than using either only HSGPA or both SAT and HSGPA.
- Also, HSGPA, and to a lesser extent SAT scores, over-predicted FYGPA for students whose highest parental education level was an Associate degree or less.

| University of Denver | Valdosta State University |  |
| University of Houston | Vanderbilt University |  |

Appendix B
Raw Correlations of SAT and HSGPA with FYGPA by Institutional Characteristics

| Institutional Characteristic | $\mathbf{k}$ | $\mathbf{n}$ | SAT-CR | SAT-M | SAT-W | SAT $^{*}$ | HSGPA | SAT $^{*}$, HSGPA |  |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Control | Private | 72 | 47,722 | 0.31 | 0.28 | 0.36 | 0.39 | 0.39 | 0.49 |
|  | Public | 57 | 126,241 | 0.29 | 0.28 | 0.34 | 0.36 | 0.37 | 0.46 |
| Admittance | Under $50 \%$ | 27 | 33,549 | 0.32 | 0.29 | 0.37 | 0.40 | 0.31 | 0.46 |
| Rate | 50 to $75 \%$ | 73 | 114,619 | 0.28 | 0.27 | 0.34 | 0.36 | 0.38 | 0.46 |
|  | Over $75 \%$ | 29 | 25,795 | 0.30 | 0.30 | 0.35 | 0.37 | 0.42 | 0.49 |
| Undergraduate | Small | 26 | 7,044 | 0.31 | 0.30 | 0.38 | 0.40 | 0.41 | 0.51 |
| Enrollment | Medium | 54 | 33,452 | 0.29 | 0.27 | 0.34 | 0.37 | 0.40 | 0.48 |
|  | Large | 20 | 33,143 | 0.27 | 0.25 | 0.32 | 0.34 | 0.38 | 0.46 |
|  | Very large | 29 | 100,324 | 0.30 | 0.29 | 0.35 | 0.37 | 0.36 | 0.46 |
| Overall |  | 129 | 173,963 | 0.29 | 0.28 | 0.35 | 0.37 | 0.37 | 0.47 |

Note. The correlations were computed within institution and pooled. Institution sizes were categorized by the number of undergraduates as follows: small $=750$ to 1,999 ; medium $=2,000$ to 7,499 ; large $=7,500$ to 14,999 ; and very large $=15,000$ or more .
$\mathrm{k}=$ number of institutions, $\mathrm{n}=$ subgroup sample size.

* SAT refers to the inclusion of all three sections in the relevant multiple correlation.

Appendix C
Raw Correlation of SAT Scores and HSGPA with FYGPA by Subgroups

| Student Characteristic |  | k | n | SAT-CR | SAT-M | SAT-W | SAT* | HSGPA | SAT*, HSGPA |
