The South Asia Out-of-School Children Initiative (OOSCI) is part of the global initiative launched by UNICEF and the UNESCO Institute for Statistics (UIS) in 2010. The goal of the initiative is to make significant and sustained reduction in the number of out-of-school children around the world by 1) developing comprehensive profiles of excluded children using consistent and innovative statistical methods; 2) linking these profiles to the barriers and bottlenecks that lead to exclusion; and 3) identifying, promoting and implementing sound policies that address exclusion from a multi-sectorial perspective.
MOST OF THE WORLD’S OUT-OF-SCHOOL CHILDREN LIVE IN SOUTH ASIA

36 MILLION OUT-OF-SCHOOL CHILDREN AGED 5 TO 14 LIVE IN SOUTH ASIA

NUMBER OF PRIMARY SCHOOL-AGE OUT-OF-SCHOOL CHILDREN BY REGION, 2000-2012 (in millions)

PROGRESS SINCE 1999

PROGRESS IN:

IMPROVING CHILD NUTRITION

Stunting, due to chronic nutrition deprivation in utero and/or during early childhood and poor sanitation, affects physical growth. Stunted children are also more likely to experience difficulty in learning. In South Asia, 38% of children under five were stunted in 2013. While this is an improvement from 50% in 2000, there is still a long way to go.

EXPANDING PRE-SCHOOL EDUCATION

55% of young children in South Asia are enrolled in pre-schools as of 2012 (up from 22% in 1992) with no major disparities in access of boys and girls. Children’s exposure to early learning is crucial in getting them ready for formal schooling. Children who have pre-school experience are less likely to repeat or dropout from the early grades of primary education. Research has shown that early childhood care and education is the most cost-effective period for investment in terms of closing equity gaps and future economic returns.

GETTING MORE CHILDREN TO SCHOOL

South Asia achieved the biggest reduction in the numbers of primary school-age out-of-school children globally to 9.8 million in 2012 from 36.7 million in 1999. There has also been substantial reduction in the numbers of out-of-school adolescents to 26.5 million in 2012 from 38 million in 1999, although progress has stagnated since 2007.

REGIONAL CONTEXT

1 in every 4 primary school-age child in the world lives in South Asia

There are 100.6 million adolescents of lower secondary school-age in South Asia, 52% of whom are boys. This is the highest number of any region in the world.

The region accounts for 13.3% of the total global adolescents population.

1 UNESCO. 2015 EFA Global Monitoring Report; Undernutrition from a poor and unvaried diet can lead to delays in gross and fine motor development, and even increased risk of mortality (Britto et al., 2013). While health may appear to be the most pressing concern at this stage of life, education also has a major role to play. Good nutrition is not enough. Children who are not stimulated cognitively and are underdeveloped socio-emotionally are also at greater risk of malnutrition and, ultimately, diminished life chances (Grantham-McGregor et al., 2007)

EXCLUSION IN EDUCATION IN SOUTH ASIA

MILLIONS OF CHILDREN AND ADOLESCENTS OUT OF SCHOOL

9.8 MILLION CHILDREN OF PRIMARY SCHOOL-AGE ARE OUT OF SCHOOL:

- 57% NEVER ENTERED
- 28% LEFT SCHOOL
- 15% ENTERED LATE

26.5 MILLION LOWER SECONDARY SCHOOL-AGE ADOLESCENTS ARE OUT OF SCHOOL

5.3 MILLION CHILDREN OUT OF SCHOOL AS A RESULT OF CONFLICT

WHEN IS A CHILD CONSIDERED TO BE “OUT OF SCHOOL”?
The OOSCI defines as “out of school” children of primary or lower secondary school age who are not enrolled in primary or secondary education. Out-of-school children can be categorized into those who have never enrolled in school and those who enrolled but left school before completing the full primary and lower secondary education cycle. The OOSCI also aims to get in-depth information on children who are in school but are at risk of dropping out and becoming the out-of-school children of tomorrow. The OOSCI uses both administrative data (i.e. data from Education Management Information Systems) and household surveys to analyze where and who out-of-school children are.5

Since 1999, more and more children are attending primary and secondary schools in South Asia. The male-female gap has continuously narrowed, except in upper secondary education. However, greater efforts are required to expand secondary education.
WHERE ARE THE OUT-OF-SCHOOL CHILDREN IN SOUTH ASIA?  

Getting children to school is only the start. The journey of completing a full cycle of basic education is as difficult for many children in South Asia. Being in school is also not a guarantee that children are learning.

IN SOUTH ASIA, FOR EVERY 100 CHILDREN WHO START PRIMARY EDUCATION, 36 WILL NOT REACH THE LAST GRADE, THIS IS THE HIGHEST RATE OF ATTRITION IN THE WORLD.

CHILDREN COULD BE IN SCHOOL BUT ARE NOT NECESSARILY LEARNING

ON AVERAGE, CHILDREN IN SOUTH ASIA SPEND ONLY 11.3 YEARS OF FORMAL SCHOOLING FROM PRIMARY TO TERTIARY EDUCATION COMPARED WITH THE AVERAGE IN DEVELOPED COUNTRIES OF 16.4 YEARS.

SCHOOL LIFE EXPECTANCY IN SOUTH ASIA

- Women: 10.9 years
- Men: 11.6 years

WHO ARE THE OUT-OF-SCHOOL-CHILDREN IN SOUTH ASIA?

77 MILLION CHILDREN IN SOUTH ASIA ARE ENGAGED IN CHILD LABOUR, A MAJOR FACTOR KEEPING CHILDREN FROM GOING TO SCHOOL

INDIA
50% of the out-of-school children in rural areas and 41% in urban areas will never enter school. Out of 2.9 million children with disabilities aged 6 to 14 years, 34% are out of school.

PAKISTAN
Primary school-age children from the poorest quintile are almost 5 times more likely to be out-of-school compared to the wealthiest quintile; around 70% of primary school-age girls in the poorest quintile are out of school; 43% of the out-of-school girls and 20% of the boys will never enter school. According to the Nepal MDG 2011 girls are twice as likely to be out of school compared to boys, although administrative data paints a very different picture.

AFGHANISTAN
Almost 70% of primary school-age girls in the poorest quintile are out of school; in this age range, around 50% more girls than boys are out of school.

NEPAL
A child from the poorest quintile is 6 times more likely to be out of school compared to a child from the wealthiest quintile; Children with disabilities are around 4.5 times more likely to be out of school. According to the Nepal MDG 2011 girls are twice as likely to be out of school compared to boys, although administrative data paints a very different picture.

BANGLADESH
A child from the poorest quintile is twice as likely to be out of school as a child from the wealthiest quintile. Around 45% of the poorest urban boys and 40% of the poorest rural boys are out of school. In comparison, less than 30% of the poorest rural and urban girls are out of school.

SRI LANKA
Children living in the tea estates are 3 times more likely to be out of school than those in other areas.

WHAT IS KEEPING CHILDREN FROM EDUCATION?

WHO ARE THE MOST EXCLUDED CHILDREN FROM EDUCATION?

Household survey data indicates that girls, children in rural areas and poor children are generally much more likely to be out of school. Children in the poorest quintile are consistently the most likely to be out of school, while gender and rural/urban differences vary significantly from country to country.

The barrier to participation in education is often a bigger problem than the disability itself. - Fixing the Broken Promise of Education for All: Findings from the Global Initiative on Out-of-School Children
MILLIONS WILL REMAIN OUT OF SCHOOL WITHOUT ACCELERATED EFFORTS

Although the eight countries of South Asia have shown significant success in bringing more children to school since 1999, progress has been stagnating. Assuming the 1992-2012 trend has continued, there are an estimated 27.4 million primary and lower secondary school-age out-of-school children in the region in 2015.

IF CURRENT TRENDS CONTINUE, MORE PRIMARY SCHOOL-AGE BOYS IN SOUTH ASIA WILL BE OUT-OF-SCHOOL

PERCENTAGE OF PRIMARY SCHOOL-AGE OUT-OF-SCHOOL CHILDREN, SOUTH ASIA, 2007-2020

268.7 million: the primary and lower secondary school-age population in South Asia in 2015. By 2030, the projected number of children aged 4-14 will be 279.6 million, accounting for 21% of the region’s total population. There are more males of school-age than females in South Asia. Only Nepal and Sri Lanka has a sex ratio under 100 while Afghanistan, Bangladesh, Bhutan, India, Maldives and Pakistan all have a sex ratio over 100 indicating more males than females in the population.16

Most countries need a policy framework combining three priorities: broad investment to strengthen and expand education systems, a sharp focus on inclusion and the quality of the education on offer, and targeted interventions for the children who are the very hardest to reach. - Fixing the Broken Promise of Education for All: Findings from the Global Initiative on Out-of-School Children

1. Strengthen education sector-wide approaches (SWAps) with increased investments for marginalized groups and alternative pathways to basic education and ensure legislation for compulsory education are in place and implemented. Examples: Ensure SWAps and sector-plans include out-of-school focused interventions; improve the diversity spectrum of non-formal education opportunities; invest in training for non-formal education teachers/facilitators.

2. Ensure that children who are out of school or at risk of dropping out receive special attention and more resources from Ministries of Education and from private and community partnerships. Provision of quality education where children are actually learning is crucial. Examples: Integrate data relevant to OOSC into the Education Management Information System; undertake awareness and behaviour change campaigns in areas with high rates of exclusion in education, including children with disabilities; monitor whether children are learning and measure learning outcomes.

3. Implement both large-scale holistic and targeted child-level interventions to address multiple barriers to schooling: Examples: Integrated Early Childhood Development programmes, pro-poor economic incentives like food-for-education programmes and conditional cash transfers.

4. Ensure interventions are evidence-based, which requires strengthening the education monitoring system to improve the availability of reliable, relevant and disaggregated data. This is a prerequisite for better identifying out-of-school children, understanding why they are out of school, and investigating how their needs and can best be addressed.

More information on effective interventions aimed at reaching out-of-school children and children at risk of dropping out can be found in a literature review on this topic commissioned by UNICEF ROSA and which can be downloaded at www.unicef.org//rosa.
