

# Are You READY TO ASSESS Social and Emotional Development?

## Tools Index

### Introduction

Assessing individuals' social and emotional (SE) knowledge, attitudes, and skills is a complex task. It requires careful consideration of the assessment purpose, rigor, practicality, burden, and ethics. Once you have considered these factors and have determined that you are, in fact, *Ready to Assess*, you are ready to act and choose an assessment tool to achieve your desired outcome. The purpose of this *Tools Index* is to help you make an informed decision on the best tool to explore these outcomes.

### About the *Tools Index*

The elements included in this document were selected to provide a brief overview of the selected outcomes tools identified by American Institutes for Research (AIR) for exploring SE knowledge, attitudes, and skills. We identified tools based on an extensive scan of the field and selected those that measured a broad range of outcomes in key areas of development. The tables are organized according to four developmental areas: early childhood, elementary school, middle and high school, and workforce. The measures identified within each table are organized alphabetically.

Elements in the tables include the following:

- Name of the tool, a Web address for finding more information, and the organization(s) or individual(s) responsible for the development of the tool
- Other ages or grades covered by the tool
- Primary constructs measured by the tool
- Information regarding who completes the tool, either youth participants, parents or guardians, or program staff or teachers (and, in some cases, more than one)
- Number of items and length of time necessary to complete the tool
- Whether a cost is associated with use of the tool
- Settings in which the tool has been used or is applicable for use

This document is the third component in AIR's suite of resources, *Ready to Assess*. *Ready to Assess* was designed to help decision makers and practitioners make informed and ethical assessment decisions. For additional information on this critical topic, read our policy brief, *Ready to Assess: Stop. Think. Act.*, and use our *Ready to Assess Decision Tree*.

Please note that the information included in these tables is the result of a point-in-time search for extant measures. We realize that there may be additional measures of social and emotional development not represented here. Please note that we will update this document annually, as new information is received. Please address any suggestions or questions regarding the content to [mmcgarrah@air.org](mailto:mmcgarrah@air.org).
