Basic Facts about Low-Income Children

Children 6 through 11 Years, 2015

Yang Jiang | Maribel R. Granja | Heather Koball

January 2017

Among all children under 18 years in the U.S., 43 percent live in low-income families and 21 percent—approximately one in five—lives in a poor family. This means that children are overrepresented among our nation’s poor; they represent 23 percent of the population but comprise 33 percent of all people in poverty. Many more children live in families with incomes just above the poverty threshold.¹

Similarly, among children ages 6 through 11 years in middle childhood, 44 percent live in low-income families and 21 percent live in poor families. Being a child in a low-income or poor family does not happen by chance. Parental education and employment, race/ethnicity, and other factors are associated with children’s experience of economic insecurity. This fact sheet describes the demographic, socioeconomic, and employment characteristics of children in middle childhood and their parents. It highlights the important factors that appear to distinguish low-income and poor children in this age group from their less disadvantaged counterparts.

How many children in middle childhood, ages 6 through 11 years, live in low-income families in the United States?

There are more than 24 million children in middle childhood age 6 through 11 in the United States.

- 44 percent—10.7 million—live in low-income families
- 21 percent—5.2 million—live in poor families

Figure 1: Children in middle childhood by family income, 2015

Note: Above low income is defined as at or above 200% of the federal poverty threshold (FPT), poor is defined as below 100% of FPT, and near poor is between 100% and 199% of the FPT. The low-income category includes both the poor and the near poor.
Has the percentage of children in middle childhood living in low-income and poor families changed over time?

The percentage of children in middle childhood living in low-income families (both poor and near poor) increased from 42 percent in 2009 to 44 percent in 2015, but decreased from a peak of 45 percent in 2012 (Figure 2). Between 2009 and 2015, the overall number of children in middle childhood increased by two percent, while the number of these children who were low income and poor increased by 8 percent and 11 percent, respectively (Table 1).

How do children in middle childhood compare to the rest of the population?

The percentage of children in middle childhood in low-income families surpasses that of adults. In addition, children in this age group are more than twice as likely as adults 65 years and older to live in poor families (Figure 3).

Does the percentage of children in low-income families vary by age group?

The percentages of children who live in low-income and poor families vary by age group. Young children under age 6 years are the most likely to live in low-income families, followed by children ages 6 through 11 years, and then by children ages 12 through 17 years (Figure 4).

- 45 percent of children under age 6 years—10.5 million—live in low-income families
- 44 percent of children ages 6 through 11 years—10.7 million—live in low-income families
- 39 percent of children ages 12 through 17 years—9.4 million—live in low-income families
Does the percentage of children in middle childhood in low-income families vary by race/ethnicity?

As Figure 5 illustrates, the percentages of low-income and poor children vary by race and ethnicity: whites and Hispanics comprise the largest shares of all low-income children ages 6 through 11 (36 percent each) and Hispanics represent the largest share of poor children in this age group (37 percent).5

Black, American Indian, and Hispanic children in middle childhood are disproportionately low income and poor (Figure 6).

- 64 percent of black children in middle childhood—2.1 million—live in low-income families
- 63 percent of Hispanic children in middle childhood—3.8 million—live in low-income families
- 63 percent of American Indian children in middle childhood—0.1 million—live in low-income families
- 31 percent of white children in middle childhood—3.8 million—live in low-income families
- 28 percent of Asian children in middle childhood—0.3 million—live in low-income families
- 39 percent of children in middle childhood of some other race—0.5 million—live in low-income families

Does the percentage of children in middle childhood in low-income families vary by parents’ nativity?6

- 53 percent of children in middle childhood with immigrant parents—3.4 million—live in low-income families
- 41 percent of children in middle childhood with native-born parents—7.3 million—live in low-income families
What are the family characteristics of low-income and poor children in middle childhood?

Parents’ Employment

Children in middle childhood with a full-time, year-round employed parent are less likely to live in a low-income family compared to children in this age group with parents who work part time/part year or who are not employed (Figure 7).

- 32 percent of children in middle childhood with at least one parent who works full time, year round—5.8 million—live in low-income families
- 9 percent of children in middle childhood with at least one parent who works full time, year round—1.7 million—live in poor families
- 75 percent of children in middle childhood with no parent who works full time, but at least one parent who works part time or part year—3.2 million—live in low-income families
- 49 percent of children in middle childhood with no parent who works full time, but at least one parent who works part time or part year—2.0 million—live in poor families
- 89 percent of children in middle childhood with no employed parents—1.8 million—live in low-income families
- 73 percent of children in middle childhood with no employed parents—1.5 million—live in poor families

Nevertheless, many low-income and poor children ages 6 through 11 have parents who work full time. More than half (54 percent) of low-income children and 32 percent of poor children in this age group live with at least one parent employed full time, year round.

Parents’ Education

Higher levels of parental education decrease the likelihood that a child will live in a low-income or poor family. Among children in middle childhood with at least one parent with some college or additional education, 31 percent live in low-income and 12 percent in poor families. By contrast, among children whose parents have less than a high school degree, 85 percent live in low-income and 55 percent in poor families (Figure 7).

Figure 7: Percentage of children in middle childhood in low-income and poor families by parents’ employment and education, 2015

- 85 percent of children in middle childhood with parents who have a high school degree but no college—3.2 million—live in low-income families
- 31 percent of children in middle childhood with at least one parent who has some college or additional education—5.2 million—live in low-income families

At the same time, significant shares of low-income and poor families with children ages 6 through 11 are headed by parents with at least some college education, as shown in Figure 8.

Family Structure

Forty-eight percent of children in middle childhood in low-income families—5.1 million—and 36 percent of children in this age group in poor families—1.9 million—live with married parents. Children who live with married parents are much less likely to be poor or low income compared to children who live with a single parent.
31 percent of children in middle childhood residing with married parents—5.1 million—live in low-income families

12 percent of children in middle childhood residing with married parents—1.9 million—live in poor families

69 percent of children in middle childhood residing with a single parent—5.6 million—live in low-income families

41 percent of children in middle childhood residing with a single parent—3.3 million—live in poor families

Does the percentage of children in middle childhood in low-income families vary by where they live?

**Region**
The percentage of children in middle childhood in low-income families varies substantially by region (Figure 9).

- 48 percent of children in middle childhood in the South—4.5 million—live in low-income families
- 44 percent of children in middle childhood in the West—2.6 million—live in low-income families
- 41 percent of children in middle childhood in the Midwest—2.1 million—live in low-income families
- 37 percent of children in middle childhood in the Northeast—1.5 million—live in low-income families

**Residential Instability and Home Ownership**
Research suggests that stable housing is important for healthy child development.9 However, children in middle childhood living in low-income families were much more likely as other children to have moved in the past year and nearly three times as likely to live in families who rent, rather than own, a home (Figure 10).

- 17 percent of children in middle childhood in low-income families—6.3 million—live in families who rent, rather than own, a home.
income families—1.9 million—moved in the last year
◆ 11 percent of children in middle childhood in families above the low-income threshold—1.5 million—moved in the last year
◆ 65 percent of children in middle childhood in low-income families—7.0 million—live in families who rent their homes
◆ 23 percent of children in middle childhood in families above the low-income threshold—3.1 million—live in families who rent their homes

Are children in middle childhood in low-income families covered by health insurance?

Among all children in middle childhood, 6 percent living in low-income families and 6 percent living in poor families are uninsured.10 Low-income and poor children in middle childhood are less likely than their older counterparts, but more likely than their younger counterparts to be without health insurance coverage (Figure 11).11 Although 26 percent of low-income children in middle childhood are covered by private health insurance, public insurance covers the majority of these children, reaching 73 percent of low-income children and 84 percent of poor children in this age group (Figure 12).

◆ 6 percent of children in middle childhood living in low-income families—0.7 million—are uninsured
◆ 26 percent of children in middle childhood living in low-income families—2.8 million—are covered by private insurance
◆ 73 percent of children in middle childhood living in low-income families—7.8 million—are covered by public insurance
Endnotes

This fact sheet is part of the National Center for Children in Poverty's demographic fact sheet series and is updated annually. Unless otherwise noted, analysis of the 2015 American Community Survey (ACS) was conducted by Yang Jiang and Maribel R. Granja of NCCP. Estimates include children living in families with at least one parent and most children living apart from both parents. Children living independently, living with a spouse, in the foster care system, or in group quarters are excluded from these data (read our report on foster youth at http://www.nccp.org/publications/pub_1165.html). Children ages 14 years and under living with only unrelated adults were not included because data on their income status were not available. For children who do not live with at least one parent (for example, children being raised by grandparents), parental characteristics are calculated based on those of the household and the householder’s spouse. We would like to thank Renée Wilson-Simmons, NCCP Director, for her advice on this fact sheet and both Seth Hartig and Suma Setty for data checks and proofreading. Special thanks to Diana Gazzia for layout and production.

1. United States Census Bureau, 2015 American Community Survey 1-Year Estimates (2016). Table S1701: Poverty Status In the Past 12 Months. Washington, DC: United States Census Bureau. Retrieved November 2016 from http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_15_1YR&step=1&.prodType=table While these numbers reflect the total number of children in poverty, the remaining numbers in this report include only children living in families, as defined in the note above. In this fact sheet, poverty is defined as family income less than 100 percent of the federal poverty threshold, as determined by the U.S. Census Bureau; low income is defined as family income less than 200 percent of the poverty threshold.

5. In the most recent ACS, parents could report children’s race as one or more of the following: “White,” “Black,” “American Indian or Alaska Native,” or “Asian and/or Hawaiian/Pacific Islander.” In a separate question, parents could report whether their children were of Hispanic origin. For the data reported, children whose parent reported their race as White, Black, American Indian or Alaska Native, or Asian and/or Hawaiian/Pacific Islander and their ethnicity as non-Hispanic were assigned a non-Hispanic category of their race. Children who were reported to be of more than one race were assigned as Other. Children whose parent identified them as Hispanic were categorized as Hispanic, regardless of their reported race.

6. The variable “native-born parents” is defined to mean that both parents in the family were born in the U.S. or its territories, or born abroad to American parent(s). The variable “immigrant parents” is defined to mean that at least one parent in the family is either a U.S. citizen by naturalization or is not a citizen of the U.S.

7. Parents’ employment level is defined as the employment level of the parent in the household who maintained the highest level of employment in the previous year. Parents can either have no employment in the previous year, part-year or part-time employment, or full-time, year-round employment. Part-year or part-time employment is defined as either working less than 50 weeks in the previous year or less than 35 hours per week. Full-time, year-round employment is defined as working at least 50 weeks in the previous year and 35 hours or more per week.

8. Parents’ education is defined as the education level of the most highly educated parent(s) living in the household. Parents can either have no high school degree, a high school degree but no college, or some college or more.

10. People can report more than one type of insurance coverage. Children not covered by private or public health insurance at the time of the survey are considered uninsured.

To find comparable information for all children, see Basic Facts about Low-Income Children: Children under 18 Years, 2015; for infants and toddlers, see Basic Facts about Low-Income Children: Children under 3 Years, 2015; for young children, see Basic Facts about Low-Income Children: Children under 6 Years, 2015; for adolescent children, see Basic Facts about Low-Income Children: Children 12 through 17 Years, 2015.
