Components of the EBP Brief Packet...

This evidence-based practice overview on Functional Behavior Assessment (FBA) includes the following components:

1. **Overview**: A quick summary of salient features of the practice, including what it is, who it can be used with, what skills it has been used with, and settings for instruction.
2. **Evidence-base**: The FBA Evidence-base details the NPDC criteria for inclusion as an evidence-based practice and the specific studies that meet the criteria for this practice.
3. **Step-by-Step Guide**: Use the FBA Step-by-Step Practice Guide as an outline for how to plan for, use, and monitor FBA. Each step includes a brief description as a helpful reminder while learning the process.
4. **Implementation Checklist**: Use the FBA Implementation Checklist to determine if the practice is being implemented as intended.
5. **Data Collection Sheets**: Use the data collection sheets as a method to collect and analyze data to determine if progress is being made for a learner with ASD.
6. **Tip Sheet for Professionals**: Use the FBA Tip Sheet for Professionals as a supplemental resource to help provide basic information about the practice to professionals working with the learner with ASD.
7. **Parent Guide**: Use the FBA Parent Guide to help parents or family members understand basic information about the practice being used with their child.
8. **Additional Resources**: Use the Additional Resources to learn more about the practice.
9. **CEC Standards**: A list of CEC Standards that apply specifically to FBA.
10. **Module References**: A list of numerical References utilized for the FBA module.

Suggested citation:
What is Functional Behavior Assessment?

At times, all children and youth can struggle with challenging behavior. If a challenging behavior interferes with the learner’s ability to learn, then a functional behavior assessment (FBA) is needed. FBA can be used when the intensity, duration, or type of interfering behavior creates safety concerns or impacts a child's development. An FBA assists the IEP team in understanding the function or purpose of a specific interfering behavior. Data collection is an essential component of FBA.

Evidence-base

Based upon the recent review, functional behavior assessment meets the evidence-based practice criteria set by NPDC with 10 single case design studies. The practice has been effective with learners in early intervention (0-2 years) to high school (15-22 years). Evidence-based practices (EBP) and studies included in the 2014 EBP report detailed how FBA can be used effectively to address: academic, adaptive, behavior, communication, and school readiness outcomes.

How is FBA Being Used?

Functional behavior assessment can be used by a variety of professionals, including teachers, special educators, therapists, paraprofessionals, and early interventionists in educational and community-based environments.

For more information visit: www.afirm.fpg.unc.edu
The National Professional Development Center on ASD has adopted the following criteria to determine if a practice is evidence-based. The EBP Report provides more information about the review process (Wong et al., 2014).

Efficacy must be established through high quality, peer-reviewed research in scientific journals using:

- randomized or quasi-experimental design studies (two high quality experimental or quasi-experimental group design studies),
- single-subject design studies (three different investigators or research groups must have conducted five high quality single subject design studies), or
- combination of evidence [one high quality randomized or quasi-experimental group design study and three high quality single subject design studies conducted by at least three different investigators or research groups (across the group and single subject design studies)].

---OVERVIEW---

Functional behavior assessment is used to understand the function or purpose of a specific interfering behavior. Functional behavior assessment meets the evidence-based practice criteria with 10 single case design studies. The practice has been effective with learners in early intervention (0-2 years) to high school (15-22 years). Studies included in the 2014 EBP report detailed how functional behavior assessment can be used effectively to address: academic, adaptive, behavior, communication, and school readiness outcomes.

In the table below, the outcomes identified by the evidence base are shown by age of participants.

High (15-22 years)

* Research which included participants in multiple age ranges.
This practice guide outlines how to plan for, use, and monitor the practice of functional behavioral assessment.

Keep in mind that FBA can be used to decrease inappropriate behaviors and increase appropriate behaviors.

BEFORE YOU START...

Each of the following points is important to address so that you can be sure the selected EBP is likely to address the learning needs of your student.

Have you found out more information about...?

- Identified the behavior...
- Collected baseline data through direct observation...
- Established a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered...

If the answer to any of these is “no,” review the process of how to select an EBP.

For more information visit: www.afirm.fpg.unc.edu
Now you are ready to start...

Step 1: FBA Planning

The planning step explains initial steps and considerations involved to prepare for and develop an FBA for a learner. Identify one person as the FBA coordinator who will coordinate and manage data collection, answer questions from other team members, and make sure that the FBA is implemented as intended.

1.1 Establish a multidisciplinary team

Planning should begin with forming a multidisciplinary team that includes all individuals who have observed the learner exhibiting the interfering behavior.

1.2 Identify and define interfering behavior

Together, the team identifies the interfering behavior that is most problematic for the learner. Any behaviors that create safety concerns for the learner or others should be addressed first.

1.3 Review records of learner

In order to understand the selected interfering behavior, records should be reviewed (medical records, psychological evaluations, educational testing, Individualized Education Program (IEP) or Individual Family Service Plan (IFSP), incident reports, anecdotal notes, etc.)

1.4 Select assessment procedures

Team members will gather information concerning the behavior from formal/informal interviews and standardized behavior rating scales.

1.5 Develop plan for collecting data

Data will need to be collected during times and settings where the interfering behavior occurs most often. Also, it is important to sample in other locations or at other times where the behavior might not occur. Data collection should be for a sufficient period of time to identify consistencies in the behavior.

Use the FBA Planning Sheet as a companion for completing the planning step.
Step 2: Using FBA

This section describes the process of implementing the FBA plan that was developed.

2.1 Collect data using selected assessment procedures

During the planning stage, the team selected several assessment tools and/or interviews. These will need to be administered and data collected.

2.2 Collect data on the occurrence of interfering behavior

Following the developed plan, the team collects data on the interfering behavior using direct observation methods. Using A-B-C data charts will help team members determine what happens right before the behavior (the antecedent), when the behavior that occurs (behavior), and what happens directly after the behavior (the consequence). Also, data tables (commonly referred to as scatterplots in the FBA literature) can be used for data collection in order to help team members determine when the behavior is occurring, the possible functions of the behavior, and times of the day when an intervention might be implemented to reduce the interfering behavior.

- Use the ABC Data Chart to understand the antecedent, behavior, and consequence.
- Use the FBA Data Table and Anecdotal Note form to identify patterns.

2.3 Analyze collected data

Analyze collected data to determine the function of the behavior. Behaviors typically fall into two categories of function: 1) to get or obtain something desired or 2) to escape or avoid.

2.4 Develop a hypothesis statement

Based upon the information gathered through assessments, interviews, and direct observations, the team develops a hypothesis statement. Be sure the hypothesis statement developed includes:

1) the setting events, immediate antecedents, and immediate consequences that surround the interfering behavior,
2) a restatement and refinement of the description of the interfering behavior that is occurring, and
3) the function the behavior serves (i.e., get/obtain, escape/avoid).

- Use the FBA Analysis and Hypothesis Form to develop a hypothesis statement.

2.5 Test the hypothesis to ensure it is correct

To test the developed hypothesis, modify the setting/activity to increase the probability that the behavior occurs. Testing can occur over several days or weeks to confirm the cause of the interfering behavior.
Step 2: Using FBA (continued)

2.6 Identify appropriate EBPs to address the interfering behavior

When team members understand the function of the behavior, evidence-based practices can be implemented to reduce the occurrence of the identified interfering behavior while increasing appropriate behaviors.

2.7 Develop behavior intervention plan

After an EBP is identified, the team develops a behavior intervention plan. The BIP should include strategies for the following:

1) preventing the occurrence of the interfering behavior,
2) teaching or increasing the replacement behavior, and
3) increasing learning opportunities and social engagement.

Use the Guide to Planning Behavior Intervention Plan to develop the BIP.
Step 3: Monitoring FBA

The following process describes how the use of FBA can be monitored and how the plan might need to be adjusted based on the data.

3.1 Collect and analyze data on interfering behavior

Team members need to collect data that focus on:
1) the frequency, or how often, the behavior occurs using time sampling or event sampling,
2) how long (duration) the interfering behavior lasts when it occurs, and
3) frequency of use of replacement behavior(s) including how often the learner uses the replaced behavior(s).

- Use the FBA Time Sampling Form to monitor the frequency of the behavior.
- Use the FBA Event Sampling Form to monitor the frequency of behaviors that are low frequency.
- Use the FBA Duration Behavior Form to monitor how long a behavior lasts.
- Use the Replacement Behavior Form to monitor strategies and interventions.

3.2 Determine next steps based on learner progress

Collecting data will help team members determine if a learner is making progress and reducing the use of the interfering behavior and increasing use of appropriate behaviors. If a learner is making progress based upon data collected, team members should continue to use the selected strategies and evidence-base practices.

If the learner with ASD is not showing progress with the selected strategies and evidence-based practices, ask yourself the following questions:
- Is the behavior well defined?
- Is the behavior measurable and observable?
- Are the selected evidence-based practices used with fidelity based upon the implementation checklists?
- Are all team members and staff members consistently using the identified strategies and responses to behavior?

If these issues have been addressed and the learner continues to exhibit high rates of the interfering behavior, consider selecting a different EBP or strategy to use with the learner.

Functional behavior assessment...

- Is an evidence-based practice for children and youth with autism spectrum disorder (ASD) from 0-22 years old that can be implemented in multiple settings.
- Assists the IEP team in understanding the function or purpose of a specific interfering behavior.

Why Use?

- A FBA is needed when the intensity, duration, or type of interfering behavior creates safety concerns or impacts a child's development and learning.
- Team members use a FBA to describe the interfering behavior, identify antecedents or consequence events, and develop and test a hypothesis.
- FBA can help a team determine appropriate evidence-based practices to use to address the interfering behavior.

Outcomes

- The evidence-base for FBA supports the use of this practice to address the outcomes below:

<table>

TIPS:

- Select one person as the FBA coordinator who will coordinate data collection, answer team questions, and ensure FBA is implemented as intended.
- If the learner is demonstrating multiple interfering behaviors, select the interfering behavior which creates a safety concern to address first.
- Collect data on the interfering behavior during various times and settings.
Functional Behavior Assessment (FBA) ---Tip Sheet for Professionals---

STEPS FOR IMPLEMENTING

1. Plan
   - Establish a multidisciplinary team.
   - Identify and define interfering behavior.
   - Review records of learner.
   - Select assessment procedures.
   - Develop plan for collecting baseline data.

2. Use
   - Collect data using selected assessment procedures.
   - Collect data on the occurrence of the interfering behavior (A-B-C behavioral analysis).
   - Analyze collected data.
   - Develop a hypothesis statement.
   - Test hypothesis to ensure it is correct.
   - Identify appropriate EBPs to address interfering behavior.
   - Develop behavior intervention plan (BIP) with strategies for increasing replacement behaviors and learning opportunities.

3. Monitor
   - Collect and analyze data on interfering behavior and replacement behavior(s) to determine if BIP is working.
   - Determine next steps based on learner progress.

Functional Behavior Assessment

This tip sheet was designed as a supplemental resource to help provide basic information about the practice.

For more information visit: www.afirm.fpg.unc.edu
This introduction provides basic information about functional behavior reinforcement.

What is FBA?
- Functional behavior assessment is an evidence-based practice for children and youth with autism spectrum disorder (ASD) from 0 to 22 years old.
- Functional behavior assessment assists the IEP team in understanding the purpose of a specific challenging behavior.

Why use FBA with my child?
- A functional behavior assessment is needed when a challenging behavior regularly interferes with your child’s safety, the safety of others, and the learning process.
- Research studies have shown that functional behavior assessment has been used effectively with learners in early intervention, preschool, elementary school, middle school, and high school to address behavior, school readiness, academic, adaptive, and communication outcomes.

What activities can I do at home?
- Notice when your child has a challenging behavior. Think about what happened before or after the behavior.
- Share your notes and observations with your IEP team to develop possible reasons for the purpose of the behavior.
- Work with your child’s IEP team to address the challenging behavior both at school and home.

The CEC Standards that apply to all 27 evidence-based practices can be found on our website at: http://afirm.fpg.unc.edu/learn-afirm

Below are CEC Standards that apply specifically to Functional Behavior Assessment (FBA) module.

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Initial Preparation Standard 2: Learning Environments</strong></td>
<td>ISCI 2 K4 Teacher attitudes and behaviors that influence behavior of individuals with exceptionalities</td>
</tr>
<tr>
<td></td>
<td>ISCI 2 S5 Modify the learning environment to manage behaviors</td>
</tr>
<tr>
<td></td>
<td>ISCI 2 S10 Use effective and varied behavior management strategies</td>
</tr>
<tr>
<td></td>
<td>ISCI 2 S11 Use the least intensive behavior management strategy consistent with the needs of the individual with exceptionalities</td>
</tr>
<tr>
<td><strong>Initial Preparation Standard 4: Assessment</strong></td>
<td>ISCI 4 S1 Gather relevant background information</td>
</tr>
<tr>
<td></td>
<td>ISCI 4 S2 Administer nonbiased formal and informal assessments</td>
</tr>
<tr>
<td></td>
<td>ISCI 4 S4 Develop or modify individualized assessment strategies</td>
</tr>
<tr>
<td></td>
<td>ISCI 4 S5 Interpret information from formal and informal assessments</td>
</tr>
<tr>
<td></td>
<td>ISCI 4 S9 Create and maintain records</td>
</tr>
<tr>
<td></td>
<td>DDA4 S1 Select, adapt and use assessment tools and methods to accommodate the abilities and needs of individuals with developmental disabilities/autism spectrum disorders</td>
</tr>
<tr>
<td></td>
<td>DDA4 S2 Develop strategies for monitoring and analyzing challenging behavior and its communicative intent</td>
</tr>
<tr>
<td></td>
<td>DDA4 S3 Conduct functional behavior assessments that lead to development of behavior support plans</td>
</tr>
<tr>
<td><strong>Initial Preparation Standard 5: Instructional Planning &amp; Strategies</strong></td>
<td>ISCI 5 S3 Use functional assessments to develop intervention plans</td>
</tr>
<tr>
<td></td>
<td>DDA5 S5 Consistent use of proactive strategies and positive behavioral supports</td>
</tr>
<tr>
<td><strong>Initial Preparation Standard 7: Collaboration</strong></td>
<td>ISCI 7 S2 Collaborate with families and others in assessment of individuals with exceptionalities</td>
</tr>
</tbody>
</table>
### Functional Behavior Assessment

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Advanced Preparation Standard 1: Assessment</strong></td>
<td></td>
</tr>
<tr>
<td>SEDAS1.S8</td>
<td>Conduct functional behavioral assessments (FBA) to determine what initiates and maintains a challenging/interfering behavior</td>
</tr>
<tr>
<td><strong>Advanced Preparation Standard 7: Collaboration</strong></td>
<td></td>
</tr>
<tr>
<td>ACSI7.S1</td>
<td>Collaborate to enhance opportunities for learners with exceptionalities</td>
</tr>
</tbody>
</table>
