Components of the EBP Brief Packet...

This evidence-based practice overview on Pivotal Response Training includes the following components:

1. **Overview**: A quick summary of salient features of the practice, including what it is, who it can be used with, what skills it has been used with, and settings for instruction.

2. **Evidence-base**: The PRT Evidence-base details the NPDC criteria for inclusion as an evidence-based practice and the specific studies that meet the criteria for this practice.

3. **Step-by-Step Guide**: Use the PRT Step-by-Step Practice Guide as an outline for how to plan for, use, and monitor PRT. Each step includes a brief description as a helpful reminder while learning the process.

4. **Implementation Checklist**: Use the PRT Implementation Checklist to determine if the practice is being implemented as intended.

5. **Data Collection Sheets**: Use the data collection sheets as a method to collect and analyze data to determine if progress is being made for a learner with ASD.

6. **Tip Sheet for Professionals**: Use the PRT Tip Sheet for Professionals as a supplemental resource to help provide basic information about the practice to professionals working with the learner with ASD.

7. **Parent Guide**: Use the PRT Parent Guide to help parents or family members understand basic information about the practice being used with their child.

8. **Additional Resources**: Use the Additional Resources to learn more about the practice.

9. **CEC Standards**: A list of CEC Standards that apply specifically to PRT.

10. **Module References**: A list of numerical References utilized for the PRT module.

**Suggested citation:**
Pivotal response training (PRT) is an intervention that integrates principles of child development with those of applied behavior analysis (ABA). This means that facilitating a PRT interaction involves a simultaneous consideration of the learner with ASD’s developmental levels and progression, along with the intentional progression through the antecedent-behavior-consequence (ABC) pattern of behavior that is familiar in other behavioral interventions.

This means that throughout a PRT session, there are many times where the practitioner cycles through this 3-part sequence:

- delivery of clear opportunities to respond (antecedent),
- the learner with ASD exhibiting a behavior, and
- the practitioner providing feedback to the learner with ASD (consequence).

Pivotal response training meets the evidence-based practice criteria set by NPDC with 7 single case design studies and 1 group design study. The practice has been effective with learners in early intervention (0-2 years) to middle school learners (12-14 years). Studies included in the 2014 EBP report detailed how pivotal response training can be used effectively to address: social, communication, and play outcomes.

PRT can be used by a variety of professionals. Speech and language pathologists, occupational therapists, behavior specialists, psychologists, and other teaching professionals may all find PRT a valuable strategy. Most learners with ASD can benefit from a structured, systematic approach that utilizes naturally occurring teaching opportunities. One of the strengths of this approach is that it is adaptable to a wide range of teaching goals and service settings.

For more information, visit:
www.afirm.fpg.unc.edu
---Evidence-base for Pivotal Response Training---

The National Professional Development Center on ASD has adopted the following criteria to determine if a practice is evidence-based. The EBP Report provides more information about the review process (Wong et al., 2014).

Efficacy must be established through high quality, peer-reviewed research in scientific journals using:
- randomized or quasi-experimental design studies (two high quality experimental or quasi-experimental group design studies),
- single-subject design studies (three different investigators or research groups must have conducted five high quality single subject design studies), or
- combination of evidence [one high quality randomized or quasi-experimental group design study and three high quality single subject design studies conducted by at least three different investigators or research groups (across the group and single subject design studies)].

--OVERVIEW--

Pivotal response training is a foundational practice used to teach target skills and increase desired behavior. Pivotal response training meets the evidence-based practice criteria with 7 single case design studies and 1 group design study. The practice has been effective with learners in early intervention (0-2 years) to middle school learners (12-14 years). Studies included in the 2014 EBP report detailed how pivotal response training can be used effectively to address: social, communication, and play outcomes.

In the table below, the outcomes identified by the evidence base are shown by age of participants.

Pivotal Response Training (PRT)

---PRT Process Guide---

PRT is comprised core components that determine the way that a practitioner will create an opportunity and will respond to the learner. The use of these components together leads to increased motivation and learning in many learners with ASD.

For more information, visit:
www.afirm.fpg.unc.edu
---Core Components of PRT---

PRT is comprised of several core components that align with the antecedent and consequence categories. These core components determine the ways that the practitioner will create an opportunity (antecedent components) and the ways that the same practitioner will respond to the learner with ASD’s behavior (consequence components).

<table>
<thead>
<tr>
<th>Component</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get the learner’s attention</td>
<td>Get the learner’s attention before presenting an opportunity or instruction.</td>
</tr>
<tr>
<td>Present a clear opportunity</td>
<td>The opportunity must be easy to understand and around the learner’s developmental level.</td>
</tr>
<tr>

<tr>
<td>Provide contingent reinforcers</td>
<td>Provide immediate and well-timed reinforcers.</td>
</tr>
<tr>
<td>Use direct reinforcement</td>
<td>Reinforcers should be an item or activity that is natural or directly related to either the desired behavior or the context of the activity.</td>
</tr>
<tr>
<td>Reward attempts</td>
<td>Reward goal-directed attempts, or good trying, throughout the activity.</td>
</tr>
</tbody>
</table>

For more information, visit: www.afirm.fpg.unc.edu
An essential component of a successful PRT session is a learner who is motivated to perform the activity, thereby reaching their target goal. Three motivational strategies are: using preferred materials, giving choices, and providing reinforcers. Use this guide to determine when to use each.

<table>
<thead>
<tr>
<th>Motivational Strategy</th>
<th>Best for…</th>
<th>May not be a good fit for…</th>
</tr>
</thead>
</table>
| **Individually Preferred Materials** | • One-on-one  
• Fit the target goal  
• A learner with low motivation  
• A learner with low resistance to giving up materials | • Group activities  
• Do not fit the target goal  
• A learner with high resistance to giving up materials |
| **Play-based Materials** | • Fit the target goal  
• Learner’s age and development | • Do not fit the target goal |
| **Enhanced Academic Materials** | • A learner who has difficulty engaging in academic activities  
• Required learning activities, such as worksheets, homework | • When learner preferred materials cannot be incorporated |
| **Learner Selected Activities** | • A learner with low motivation  
• Activity gives learner control, such as free play, recess  
• Learner can determine the length of activity | • Group activities  
• Activity materials are set  
• Activity length is set |
| **Choices Between Selected Activities** | • Fit the target goal | • Only one choice is available |
| **Choices Within Selected Activities** | • Group activities  
• Activity is set | • A learner with low motivation |
| **Use Reinforcers** | • A learner with low motivation  
• A learner learning a new target skill  
• Non-preferred activities | • A learner with high motivation  
• Preferred activities  
• Achieved goals  
• Practicing achieved goals |
| **Reward Attempts** | • A learner with low motivation  
• A learner frustrated with the activity | • Achieved goals  
• Practicing achieved goals |

---PRT Activity Plan---

Learner’s Name: ____________________  Date/Time: _____________
Facilitator(s): __________________________________________
Target Behavior/Skill: _______________________________________

| PRT Activity Scheme: ____________________ | Frequency: _______ times a week |
| Setting of Activity: ____________________ | Length: _______ minutes         |

- Get Learner’s Attention and Present a Clear Opportunity
- Easy Tasks & Varied Instructions:
- Difficult Tasks & Varied Instructions:

- Use Preferred Materials:
  - Individually preferred materials:
  - Play-based materials:
  - Enhanced academic materials:
- Give Choices:
  - Choices between activities:
  - Choices within activities:
- Model Turn-taking
- Pause for 5-10 seconds
- Respond to the Learner:
  - Direct reinforcement:
  - Contingent Rewards (how to earn and frequency):
  - Reward attempts (what does a good attempt look like):

For more information, visit:
www.afirm.fpg.unc.edu
---PRT Activity Plan---

Learner’s Name: Carolyn, George, & Natalia  Date/Time: lunch

Facilitator(s): Ms. Prince

Target Behavior/Skill: increase social skills

| PRT Activity Scheme: Board games | Frequency: 5 times a week |
| Setting of Activity: Ms. Prince’s office | Length: 10 minutes |

- Get Learner’s Attention and Present a Clear Opportunity
  - Easy Tasks & Varied Instructions:
    - Say greeting.
    - Ask ‘How are you?’
    - Respond to ‘How are you?’ with verbal prompts and visual cue cards
  - Difficult Tasks & Varied Instructions:
    - Identify expected & unexpected behaviors in social situations with verbal prompts and visual cue cards

- Use Preferred Materials:
  - Individually preferred materials:
  - Play-based materials: ‘Social Skills’ board game
  - Enhanced academic materials:

- Give Choices:
  - Choices between activities:
  - Choices within activities: Choose piece

- Model Turn-taking
- Pause for 5-10 seconds

- Respond to the Learner:
  - Direct reinforcement: use the natural rewards in the board game (moving piece)
  - Contingent Rewards (how to earn and frequency):
    - Reward attempts (what does a good attempt look like): Provide emoticon stickers when a learner begins to share a story, discuss whether the behavior in the story is a social behavior

For more information, visit:
www.afirm.fpg.unc.edu
---PRT Attention Checklist---

Learners with autism may exhibit unique ways of showing their attention. It is possible that the learner will demonstrate other indicators of attention. Use the checklist below to look for possible indicators of attention.

Do I have the learner's attention?

☐ The learner is looking towards me (may be through the corner of the eye).
☐ The learner is looking towards the teaching materials.
☐ The learner's body is oriented towards me or materials.
☐ The learner is not engaged in self-stimulatory behavior.
☐ The learner is not actively engaged with another object.
☐ The learner is reaching for teaching materials or toy.

For more information, visit:
www.afirm.fpg.unc.edu
---PRT Appropriate Feedback---

Provide rewards immediately when the learner responds appropriately. Provide correction or prompting when they respond inappropriately or incorrectly. Rewards should be delivered frequently enough to encourage the learner to respond.

**Learner's Response**

- **Appropriate Response**
  - Give reward paired with specific verbal praise

- **Reasonable Attempt**
  - Give reward paired with specific verbal praise

- **Inappropriate Response**
  - Prompt the learner to complete the task
  - Present the instruction again

- **Incorrect Response**
  - Say, 'Try again' and prompt the learner to complete the task
  - Say, 'Try again and present the instruction again

For more information, visit: www.afirm.fpg.unc.edu
This practice guide outlines how to plan for, use, and monitor the practice of Pivotal Response Training.

Keep in mind that PRT can be used to increase target skills/behaviors through adult supported play with typically developing peers.

BEFORE YOU START...

Each of the following points is important to address so that you can be sure the selected EBP is likely to address the learning needs of your student.

Have you found out more information about...?

☐ Establishing a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered...

☐ Identifying additional evidence-based practices...

If the answer to any of these is “no,” review the process of how to select an EBP.

For more information, visit: www.afirm.fpg.unc.edu
Step 1: Planning

The planning step explains initial steps and considerations involved to prepare for PRT and develop a lesson plan for a learner with ASD.

1.1 Identify easy and difficult tasks

Easy tasks, or maintenance targets, are those that a learner with ASD can do approximately 9/10 times correctly, whereas a difficult task, or acquisition target, is one that is new or continues to be challenging, such as their current goals. This mixture of task difficulty is important because:

- it reduces failure and increases motivation,
- maintains the learner with ASD's experience of success while still allowing the practitioner to help move the learner with ASD forward in learning new skills,
- is developmentally appropriate and consistent with how typically developing peers go between easy and difficult activities,
- increases spontaneity and reduces prompt dependence,
- will increase both confidence and natural use of skills, and
- helps the learner with ASD maintain skills over time.

1.2 Select materials

Each PRT activity should be based around materials that can be categorized into at least one of these groupings:

- individually preferred materials,
- play-based materials, or
- enhanced academic materials.

Use the PRT Preference Assessment to identify and select learner preferred materials.

1.3 Determine motivational strategies

An essential component of a successful PRT session is a learner who is motivated to perform the activity, thereby reaching their target goal. Three motivational strategies include:

- using learner preferred materials
- giving choices
- providing reinforcement

Use the PRT Motivational Guide to determine motivational strategies to use.
Step 1: Planning (continued)

1.4 Arrange environment

Setting up the environment when using PRT is similar to using other interventions:
- limit distractions
- provide visual supports

*Note:* For more information about visual boundaries, see the Visual Supports AFIRM Module.

1.5 Determine prompts

Writing down what the activity will look like is a helpful process to consider if the lesson makes sense and feels natural.

*Note:* For more information about prompting, see the Prompting AFIRM Module.

Use the PRT Activity Plan to develop a PRT activity session.

1.6 Obtain training/supervision

Seeking the appropriate training or supervision is encouraged for those wishing to use PRT to ensure successful goal acquisition for learners.

Step 2: Using

This section describes the process of implementing PRT.

2.1 Create an opportunity

The first step of conducting PRT is to create a clear opportunity for the learner to respond. A clear opportunity is understandable, uninterrupted, and developmentally appropriate. To create an opportunity:
- Get the learner’s attention
- Use varied instructions
- Use preferred materials
- Give choices
- Follow the learner’s lead

*Use the PRT Learner’s Attention Checklist to gauge the learner’s attention.*

2.2 Pause

Some peers may require a longer processing time than expected. Pause and wait 5 to 10 seconds for the learner with ASD to respond. Avoid the temptation to repeat the presented opportunity until the learner has enough time to process the phrase. If learner is still unresponsive, consider ways to provide some additional prompting or support for the learner to help them understand that they should respond.

*Note:* For more information about prompting, see the Prompting AFIRM Module.
Step 2: Using (continued)

2.3 Respond to the learner

Reward goal-directed attempts, or good trying, throughout the activity, as well as correct or appropriate responses. Ways to provide reinforcers for the learner include:

- Natural Reinforcement
- Continuous Reinforcement
- Intermittent Reinforcement

Note: For more information about providing reinforcers, see the Reinforcement AFIRM Module.

Use the PRT Appropriate Feedback Guide to determine feedback for the learner.

2.4 Turn-take, when appropriate

Incorporate turn-taking into the interaction for two reasons:

- easily regain control of the materials when needed
- model appropriate skills

For more information about classroom-based PRT, please check out the CPRT Guide.

Step 3: Monitoring

The following process describes how the use of PRT can be monitored and how to adjust your plan based on the data.

3.1 Collect and analyze data

Plan to collect data on the learner's performance of the target skill throughout implementation.

- Use the PRT Interval Data Collection form to collect data on a target skill/behavior at the end of an interval.
- Use the PRT Group Data Collection form to collect data on target skills/behaviors of group members.
- Use the PRT Open Data Collection form to collect information at the end of the PRT session.

3.2 Conduct a generalization probe

Conducting a generalization probe helps the practitioner be intentional in varying opportunities for the learner in order to obtain a complete picture of the learner's abilities.

- Use the PRT Generalization Probe to probe the learner's generalization of the target skill/behavior across materials, settings, and teachers.

Continue ➔
3.3 Determine next steps based on learner progress

If the learner with ASD is showing progress with PRT based upon collected data, then continue to use this practice with the learner. Gradually new target skills and behaviors can be introduced to the learner with ASD.

If the learner with ASD is not showing progress with PRT, ask yourself the following questions:

- Is the target skill or behavior well defined?
- Is the target skill or behavior measurable and observable?
- Do the motivational strategies match the learner’s learning style and developmental level?
- Was PRT used with fidelity? (Use the PRT Implementation Checklist to determine fidelity.)
- Are the visuals and activities appropriate to the learner’s developmental level and level of language skills?
- Are instructions varied to maintain learner’s motivation?
- Are reinforcers used that are motivating to the learner?
- Was the reinforcer applied with fidelity?
- Were learner attempts rewarded with a reinforcer?

If these issues have been addressed and the learner with ASD continues not to show progress, consider selecting a different evidence-based practice to use with the learner.

---

Before you start:

Have you...

- Identified the target skill?
- Collected baseline data through direct observation?
- Established a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered.

If the answer to any of these is “no”, refer to the “Selecting EBPs” section on the website.
---PRT Interval Data Collection---

**Before beginning PRT:** Enter the target skills to be addressed, mark how the skill is measured, and define how maintenance (easy tasks) and acquisition cues (difficult tasks) are provided for each interval. **During the activity:** After each interval, record the materials and the type of prompt used most often to elicit the **acquisition skill(s).** Record sample student responses for the acquisition skills at the prompt level indicated. At each interval, rate the learner’s performance of maintenance skills for that goal based on the scale below.

### Prompt Levels:
- **F** - Full
- **P** - Partial
- **Ph** - Physical
- **V** - Verbal
- **Vs** - Visual
- **G** - Gestural
- **I** - Independent (no prompt)

### Acquisition Targets:

<table>
<thead>
<tr>
<th>Initials</th>

---PRT Group Data Collection---

*Before beginning PRT:* Write several target skill areas relevant to the activity across the top. Note the current acquisition skill (difficult tasks) for each learner in each column. *During the activity:* Rate the learner’s performance of the acquisition skill from 1 to 5 at three points during the activity. At the end, rate each student’s motivation from 1 to 5.

---PRT Open Data Collection---

Record data only one time at the end of the activity, so there is one data point for the whole interaction. The information recorded at the end of the session includes an example of the learner’s best response during the activity, the most frequent prompt level used to promote responding, and an estimation of how the learner performed the target skill with a ‘+’, ‘v’, or ‘-’ designation.

**Learner:**

Pivotal Response Training (PRT)---Professional's Guide---

Pivotal Response Training...
- is an evidence-based practice for learners in early intervention (0-2 years) to middle school learners (12-14 years) that can be implemented in multiple settings.
- is conducted in natural settings in which social, communication, and play skills are targeted for improvement.

Why Use?
- PRT has been found to be effective in increasing social initiations, functional play skills, and symbolic play skills of learners with ASD.
- PRT incorporates a variety of motivational strategies, such as learner preferred materials, choices, and reinforcement.

Outcomes
- The evidence-base for PRT supports the use of this practice to address the outcomes below:

<table>
<thead>
<tr>
<th>Early Intervention (0-2)</th>
<th>Preschool (3-5)</th>
<th>Elementary (6-11)</th>
<th>Middle (12-14)</th>
<th>High (15-22)</th>
</tr>
</thead>
<tbody>

<td></td>
</tr>
</tbody>
</table>

TIPS:
- Create an appropriate opportunity for the learner with ASD at or just above their developmental levels.
- Check to see if you have the learner’s attention before presenting an opportunity.
- Vary instructions, materials, tasks, reinforcers, and give choices to maintain the learner’s motivation.
- Follow the learner’s lead when their interests change.
Pivotal Response Training (PRT)
---Professional’s Guide---

STEPS FOR IMPLEMENTING

1. Plan
   - Identify easy and difficult tasks
   - Select materials
   - Determine motivational strategies (learner preferred materials, choices, reinforcers)
   - Arrange environment
   - Determine prompts
   - Obtain training and/or supervision, if needed

2. Use
   - Create an opportunity (varied instructions, materials, choices)
   - Pause 5 to 10 seconds
   - Respond to the learner
   - Turn-taking, when appropriate

3. Monitor
   - Collect data on target skill/behavior
   - Conduct a generalization probe
   - Determine next steps

Autism Focused Intervention Resources & Modules
This parent introduction to Pivotal Response Training was designed as a supplemental resource to help answer basic questions about this practice.

To find out more about how PRT is used with your child, speak with:

For more information visit: www.afirm.fpg.unc.edu

---

This introduction provides basic information about Pivotal Response Training.

**What is a Pivotal Response Training?**
- Pivotal Response Training is an evidence-based practice for learners in early intervention (0-2 years) to middle school learners (12-14 years).
- Pivotal response training (PRT) is an intervention that integrates principles of child development with those of applied behavior analysis (ABA).

**Why use PRT with my child?**
- PRT provides learners with ASD with a natural and clear opportunity at or just above their developmental level to learn new target skills.
- Research studies have shown that PRT can be used to address a variety of goals, including social, communication, and play outcomes.

**What activities can I do at home?**
- Since PRT occurs in natural settings, provide varied instructions or commenting during daily activities, such as setting the dinner table or playtime with siblings.
- Provide opportunities for your child to take turns, either with yourself, siblings, or with peers during a playdate.
