Abstract

Problem Statement: Having appeared in the 60s, the Communicative Approach still keeps its popularity in language teaching contexts. There is almost no doubt that its application varies depending on the teacher’s understanding of the methodology. Likewise, some studies on the application of the Communicative Approach in Turkey have revealed that foreign language teaching is not performed in a communicative way due to some challenges and problems.

Purpose of the Study: This paper aims to depict the use of the Communicative Approach in 9th grade classes as well as the opinions of the teachers and students on its implementation.

Method: This is a qualitative study since it aims to describe behaviors by looking at patterns to emerge in order to learn how they happen as well as by interpreting those patterns so as to find out why they happen in that particular way. The students and teachers of two 9th grade classes in 2012-2013 academic year were observed for one hour per week in a semester. The data were collected via COLT (Communicative Orientation of Language Teaching) observation scheme and the interview questions. The data from the observation scheme were analyzed by proportion calculations while a content analysis was performed with the interview data. The coding for the observations and transcriptions for the interviews were done more than once at different times to check consistency and to achieve reliability and validity.

** Dr., Dokuz Eylul University, Buca Education Faculty, bernacoker@gmail.com
Findings: The findings have showed that the application of the Communicative Approach highly varies according to the teacher and the teaching context. When compared, the language learning context at the Anatolian high school is much more communicative than the one at the general high school. Still, it is not the ideal communicative classroom depicted in the text of the national curriculum. It has also been found that although the learners have similar attitudes, beliefs and expectations about their language learning, they do not receive the same teaching practices.

Conclusion and Recommendations: In order to adopt the communicative approach successfully in EFL countries like Turkey, the change and the employment should be steady and the countries’ particular EFL contexts and the teachers’ perceptions of an innovation as well as students’ previous educational habits should be considered. Also, continuous teacher training and teacher development opportunities focusing on real classroom applications, especially within the crucial first few years of the innovation period are needed to support the application of any innovation in a curriculum.

Keywords: English language teaching, learner beliefs, teacher beliefs, classroom observation.

Introduction

Learning and teaching of a second language has become a vital need rather than a luxury in today’s world due to the fact that multilingualism has gained significant importance as people are to follow the rapid developments in various areas. Teaching of English, which is the most common language used for international communication, has always been important and prior in Turkish education system (Kirkgoz, 2007; Oral, 2010; Alptekin & Tatar, 2011; Di Pajo & Tansel, 2015). However, it is also one of the most serious educational problems that need to be urgently considered since Turkey has not been much successful in second language teaching despite making students study a language for long years (Akalin & Zengin, 2007; Isik, 2008; Alptekin & Tatar, 2011; Solak & Bayar, 2015). Akpınar and Aydın (2009) and Paker (2012) state that there are undoubtedly serious problems in second language teaching in Turkey since learners who spend over ten years studying a second language can only achieve a little grammar, but almost no communication skills. Therefore, the previous curriculum of second language teaching has been changed according to the principles of the new movements and approaches of teaching which favor student-centered learning environments rather than the traditional teacher-centered ones and which emphasize learning processes rather than learning products.

Since 2005, the Turkish government has been trying to standardize English language teaching as a government policy in order to achieve the harmony with the
European Union and get the full membership. Therefore, the 1997 curriculum, which introduced the concept of communicative approach to language teaching in Turkey, has been revised a couple of times to adapt it into the European standards (Arslan & Coskun, 2012). In the latest version of the curriculum for English language teaching in high schools published by the Ministry of National Education (MNE) in 2011, it is clearly stated that this new program is primarily and dominantly based on the communicative approach and has been prepared to be in harmony with the Common European Framework of Reference for Languages. That is, students should be directed to understand and use rather than to memorize what they are learning since communication is a process to meet their needs, to improve themselves as well as to survive in the social life (Paker, 2012; Zorba & Arikan, 2016).

The Communicative Approach

The birth of the communicative approach goes back to the late 1960s when situational language teaching started to gain importance in Britain. After the discovery of the creativity and uniqueness of individual sentences, it was realized that the functional and communicative potential of language had a crucial role in language learning and teaching. In the early 1970s, Wilkin studied on the communicative meanings to be understood and expressed. His studies resulted in a new way to describe the core of language: notional categories and communicative functions rather than the traditional concepts of grammar and vocabulary. Thus, he produced "notional syllabuses" which led to the development of the communicative approach (Richards & Rodgers, 2002).

Therefore, it is obvious that in terms of language teaching, the communicative approach puts the emphasis on communicative competence. Brown (2000, 246) defines communicative competence as the one that allows us to exchange meanings between persons in particular circumstances. Dealing with activities consisting of real communication, which let the learner use meaningful language to carry out meaningful tasks enhances learning (Richards & Rodgers, 2002). Harmer (1987, 37) explains the learning principles in accordance with the communicative approach and puts the emphasis on communicative activities in which language is utilized as a tool to accomplish an interactive assignment.

On the other hand, Richards (2006), highlights that the implementation of the communicative approach alters according to the teacher’s perception of it. Moreover, Crawford (2004) emphasizes the significance of the teacher’s implementation skills in the application of a new curriculum. Mowlaie and Rahimi (2010) state that teachers’ beliefs concerning the approach have a crucial role in their classroom practices and many language teachers do not have conviction in enabling their learners to communicate.

Therefore, the theoretical reconstruction of the new curriculum in accordance with the Communicative Approach in Turkey does not necessarily reflect what is going on within the classroom. In fact, it is known that there has been variety as well as inconsistency in foreign language instruction practices in Turkey (Kırkgöz, 2008). This is mainly because teachers face some difficulties with the implementation of any
innovation or change in the educational programme (Oral, 2010; Ari, 2014). It is not an easy task to replace their habits with a new approach especially for the teachers with established teaching practices of long years (Akpinar-Dellal & Cinar, 2011). Novice teachers and pre-service teachers are also put to create a communicative classroom due to the lack of practice in real teaching contexts throughout their teacher training programs (Celik & Arikan, 2012; Liao & Zhao, 2012; Lalor, Lorenzi & Rami, 2015; Ortaçtepe & Akyel, 2015). Likewise, the in-service training programs tend to be rather insufficient due to their one-shot, top-down and mainly transmission-based quality (Uysal, 2012). In general, teachers are not knowledgeable enough about the requirements of the new curriculum or even if they gain some understanding in theory, they are not motivated to implement it efficiently because they do not know how to put it into practice in real classroom settings (Demir & Demir, 2012; Karakaş, 2013). For instance, Sarıçoban (2013) expresses that despite their interest in computers and technology, many language teachers in Turkey do not know how to use them as a teaching tool.

Altan (2006) states that foreign language teachers in Turkey encounter serious challenges while meeting the demands of the 21st century and therefore need efficient support to improve their quality and to continue their professional development. It is also argued that foreign language education policies affected by current issues and administrative approaches without analyzing the needs and demands of the target group in a scientific way have led to an undesirable failure in language teaching in Turkey (Li, 1998; Isik, 2008; Incecay & Incecay, 2009; Nergis, 2011). Sarıçoban and Oz (2014) underline the importance of the consideration of learners’ sociocultural backgrounds and educational settings and they state that teachers and program developers should be cautious in the process of determining appropriate materials and pedagogical approaches for specific contexts.

It is not possible to claim that a change in theory will guarantee a change in practice. Consequently, whether the application of the new curriculum by MNE in actual teaching contexts is as successful as it is in the theoretical base still remains as a question. This means that there is a need for an effective feedback about the successful and inefficient facets of the curriculum in terms of its application and this is the need which is aimed to meet by this paper. It is obvious that the new program aims to enable teachers to create communicative language classrooms in high schools, but is it so in reality? So, this is the question in general to be answered in this paper.

The Objectives

The objective of this paper is to depict how effectively the communicative approach is being applied in high school 9th grade classrooms and to find out the beliefs of the teachers and students on the use of this approach in terms of classroom practices.
Research Questions

1. To what extent are the 9th grade English classes in two high schools in Izmir, Buca based on communication?

2. What do the 9th grade students in two high schools in Izmir, Buca think about the communicative features of their English classes?

3. What do the teachers who teach English to the 9th grades in two high schools in Izmir, Buca think about the communicative features of their classes?

Method

Research Design

This is a qualitative study which focuses on emerging patterns to depict behaviors by analyzing descriptive data to understand how and why these behaviors and patterns come about in that specific style (Richards, 2003; Mackey & Gass, 2005).

Research Sample

In this study, typical sampling technique was used. Typical sampling is a technique which allows the researcher to choose the most typical one or ones to study among the contexts in which an application is being implemented. With this technique, the aim is to study the average contexts in order to get a general idea about a particular phenomenon (Yildirim & Simsek, 1999). The sample of this study included the students and teachers of two 9th grade classes: one from a general high school (HAYL) and the other from an Anatolian high school (FSAL) in Buca-Izmir, in 2012-2013 academic year.

Research Instrument and Procedure

Communicative Orientation of Language Teaching (COLT) Observation Scheme: The data were collected with the COLT (Communicative Orientation of Language Teaching) scheme by Allen, Frohlich and Spada (1983). It was created to depict the characteristics of communication and aims to portray each activity in terms of five parameters which were determined considering the current theories of communicative competence and other related literature in first and second language learning (Allen et al., 1983). These parameters include time, activities and episodes, participant organization, content, content control, student modality and materials (Spada & Frohlich, 1995). Coding was done by putting check marks into the appropriate boxes under each of the five major categories.

Interview Questions: The participant teachers and some of the students were interviewed. The interview questions were formed according to the basic principles of the communicative approach so as to discover both the teachers’ and students’ opinions and beliefs about how the language was taught. Questions were also included to reveal what they thought about the support of their textbook in this process. The interview included questions like “What do you think about inclusion of pair work and group work activities in your language class?”, “Can you give an example of
your favorite activities?”, “What are your responsibilities as a teacher / student in the classroom?”, “Which language skill(s) should be given importance in language instruction?”. 

Validity and Reliability

To achieve reliability and validity in the observations, the two classes were observed for seven weeks and the effects of the observer on the participants were minimized. The coding was done three times at different times with the help of the tape-recordings and controlled by three different supervisors to check consistency. In the interviews, all the participants were asked the questions without changing the wording and they were assured that they would not be penalized because of what they would tell since their identity would not be revealed. Additionally, some random parts of the interviews were transcribed twice at different times to check consistency (Turnuklu, 2000; Seferaj, 2009).

Data Analysis

The analysis for the observation data started with the calculation of time for each activity and episode. The percentage of time spent on each of the categories was calculated under the major features. On the other hand, a content analysis was implemented on the interview data in order to draw the common themes.

Results

Results for the Classroom Observations

The results for the analysis of the classroom observation data collected with the COLT have been presented in this section under the five main categories provided in the observation scheme. These categories include participant organization, content, content control, student modality and material types.

Table 1.
Participant Organization by Institution

<table>
<thead>
<tr>
<th>Participant organization</th>
<th>Class</th>
<th>Group</th>
<th>Individual</th>
</tr>
</thead>
<tbody>
<tr>
<td>FSAL</td>
<td>42.96</td>
<td>2.96</td>
<td>32.22</td>
</tr>
<tr>
<td>HAYL</td>
<td>86.06</td>
<td>-</td>
<td>13.93</td>
</tr>
</tbody>
</table>
As can be seen in Table 1, the teacher at FSAL spent the 45.92 per cent of the time for whole class interaction, the majority of which was between the teacher and the student or the whole class (42.96%) while the 32.22 per cent of the time was devoted to group work and the 21.85 per cent was used for individual studies. The teacher in HAYL spent the 86.06 per cent of the time on whole class interaction which was totally between the teacher and the students and the 13.93 per cent of the time was devoted to individual studies.

Table 2.
Content by Institution

<table>
<thead>
<tr>
<th>Content</th>
<th>Management</th>
<th>Language</th>
<th>Other topics</th>
</tr>
</thead>
<tbody>
<tr>
<td>Procedure</td>
<td>2.59</td>
<td>1.48</td>
<td>57.03</td>
</tr>
<tr>
<td>Discipline</td>
<td>7.40</td>
<td>2.22</td>
<td>-</td>
</tr>
<tr>
<td>Form</td>
<td></td>
<td></td>
<td>11.48</td>
</tr>
<tr>
<td>Function</td>
<td></td>
<td></td>
<td>25.92</td>
</tr>
</tbody>
</table>

According to Table 2, the teacher at FSAL spent the 4.07 per cent of the time for management, the 62.69 per cent for language and the 37.4 per cent for other topics whereas the teacher at HAYL spent the 100 per cent of the class time to focus on language form. It is also seen that the teacher at FSAL devoted most of the class time (57.03%) to deal with language form rather than function, discourse or sociolinguistics.

Table 3.
Content Control by Institution

<table>
<thead>
<tr>
<th>Content control</th>
<th>Teacher/text</th>
<th>Teacher/text/student</th>
<th>Student</th>
</tr>
</thead>
<tbody>
<tr>
<td>FSAL</td>
<td>61.11</td>
<td>38.88</td>
<td>-</td>
</tr>
<tr>
<td>HAYL</td>
<td>100</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>
As Table 3 presents, the 61.11 per cent of the content of the classroom instruction was controlled by the teacher and/or the text whereas the 38.88 per cent was decided by the teacher, the text and the student at FSAL. The whole content was determined by the teacher and/or the text at HAYL without giving the students any chance to control the content of the instruction in the class.

Table 4.
Student Modality by Institution

<table>
<thead>
<tr>
<th>Student modality</th>
<th>Listening</th>
<th>Speaking</th>
<th>Reading</th>
<th>Writing</th>
<th>Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>FSAL</td>
<td>65.55</td>
<td>35.92</td>
<td>46.66</td>
<td>42.59</td>
<td>-</td>
</tr>
<tr>
<td>HAYL</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>100</td>
</tr>
</tbody>
</table>

According to Table 4, the students at FSAL spent the 65.55 per cent of the class time by listening, the 35.92 per cent by speaking, the 46.66 per cent by reading and the 42.59 per cent by writing whereas the students at HAYL spent the whole class time by writing (100%). That is, all the four language skills were almost equally emphasized at FSAL while they were completely ignored at HAYL.

Table 5.
Material Types by Institution

<table>
<thead>
<tr>
<th>Materials</th>
<th>Type</th>
<th>Source</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Text</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Audio</td>
</tr>
<tr>
<td></td>
<td>Minimal</td>
<td>Visual</td>
</tr>
<tr>
<td>FSAL</td>
<td>62.59</td>
<td>2.59</td>
</tr>
<tr>
<td>HAYL</td>
<td>83.08</td>
<td>-</td>
</tr>
</tbody>
</table>

Table 5 indicates that at FSAL the 65.18 per cent of the class time was spent with texts, the majority of which were minimal texts (62.59%) while the 7.77 per cent was spent with audio and the 25.92 per cent was spent with visual materials. The 83.08 per cent of the class time was spent with minimal texts at HAYL and the students
passed the 16.02 per cent of their time with no materials at all. Moreover, the 61.11 per cent of the class time was spent with the materials produced by non-native speakers and the 25.92 per cent was passed with student-made materials at FSAL. Table 5 also indicates that the 83.08 per cent of the class time was spent with the materials produced by non-native speakers at HAYL.

Results from the Interviews

The results for the interviews with the teachers and the students have been presented in this section under eight main themes concerning the assumptions of the Communicative Approach. These categories include use of pair/group work activities, fluency versus accuracy, use of the native language in the classroom, error correction, teacher roles, learner roles, language skills and the course book.

Use of Pair/Group Work Activities: In the interviews, both the teachers and the students were asked about their opinions about the pair/group work activities in English classes and except one teacher and one student, the rest stated that they found these activities advantageous for language learning and they should be included in the lessons since these activities:

- provide a chance to speak and practice the language,
- help students to learn from each other,
- let students check what they have learnt,
- are motivating, encouraging and fun to do and so improve learners’ self-confidence.

However, the other teacher from the general high school claimed that such activities could be used with learners of a certain language level and it was not possible or useful to do them with lower level learners like his own students as it was not possible to involve the students in the activities.

Fluency versus Accuracy: When asked about the significance of fluency and accuracy in language learning, the majority of the participants agreed on the significance of fluency since they believed that accuracy was not important as long as people could communicate with each other. Moreover, they stated that they could speak their native language fluently but not in a complete accuracy which was perfectly fine in all languages. Only the teacher from the general high school and one of his students favored accuracy. The teacher claimed that it was not possible to achieve fluency without accuracy and the student expressed that people could not understand each other without accuracy.

Use of the Native Language in the Classroom: When they were asked to consider the use of the mother tongue in the lesson, the majority of the participants stated that their native language should be included in their lessons adding that this would be advantageous for their learning. Additionally, they preferred Turkish as their native language in teaching or learning grammar whereas they believed that they should be using the target language for meaningful and communicative activities. However,
there are two learners who favored using English all the time even though they found it challenging because they believed that being challenged would contribute to their learning.

**Error Correction:** In terms of error correction, there was a confirmation that learners should be given a chance for self-correction first. They stated that it should be the teacher who would provide the necessary feedback if learners could not correct themselves and also learners should not be interfered while speaking so that they would not get anxious, excited, distracted or confused, rather, they should be given the opportunity to complete their speech before they received the feedback. On the other hand, there are a few students who would rather get corrected by their friends since they feel themselves closer to them and so they feel more comfortable with their friends.

**Teacher Roles:** When they were asked about the roles and responsibilities of a language teacher in the classroom, the participants mainly stated that a good teacher should:

- teach the language well, provide efficient feedback and support for the learners;
- enable the learners to speak the language and become a model with his/her way of speaking the target language;
- challenge, encourage and motivate the learners;
- behave in a friendly way and share some information about real life and the outside world.

**Learner Roles:** When they were asked about the roles and responsibilities of a language learner, the participants stated that the most important things for a student were to pay attention to the lesson and the teacher, not to get engaged with other things and not to get distracted, to participate in the classroom activities, to be determined and to try to learn and speak English both inside and outside the classroom.

**Language Skills:** When the participants were asked to consider the significance of language skills for their learning, the majority expressed that speaking should be given the priority because they perceived this skill as the main means of communication in real life. There were also some students who valued listening in addition to speaking as they believed these two skills were complementary. However, they did not find themselves successful in these skills. They believed they were better at grammar, writing and vocabulary because they were on their own when they were writing something and so they did not feel much anxious and they were accustomed to writing and grammar rather than speaking due to their classroom routine. However, the teacher of the general high school gave the priority to grammar as he believed that grammar was the main skill in language learning and other skills could not be developed without it whereas the teacher of the Anatolian
attributed equal importance to all language skills since she believed all were complementary for one another.

The Course Book: When the participants were asked to evaluate the contribution of their course book to their language learning, the participants from the general high school said that they had no idea about their book since they had never used it, but it could have been useful as it would have given a chance to revise or study the topics covered in the classroom when they went home. Their teacher also criticized the book severely claiming that the content and the level of the book were not suitable for his learners. Likewise, the participants from the Anatolian high school also criticized the book because they found it too simple for their level and it did not include anything new for them so they felt that it did not help them to improve their language abilities. On the other hand, they said that they also enjoyed the simplicity of the book since it was stress free for them. The teacher of this school agreed with the learners on this stating that she got disappointed with the level of the book because it turned out to be much simpler for her learners.

Discussion and Conclusions

This paper has aimed to find out how effectively the communicative approach is being applied in high school 9th grade classrooms and to see the case from the viewpoint of the teachers and students.

First, the dominant participant organization in the observed classes is between the teacher and the students or the whole class. So, there is a tendency for teacher-centered instruction and very little or no interaction between the learners. On the other hand, the majority of the participants are highly aware of the advantages of such activities and favor the inclusion of them in their lessons. However, like the teachers in this study, language teachers in Turkey face some challenges in implementing such activities due to big classroom sizes, traditional grammar-based testing and the time pressure to cover the schedule (Ozsevik, 2010; Coskun, 2011; Karakas, 2013; Al Asmari, 2015). Moreover, some teachers avoid such activities because they simply do not believe that they can make their students communicate in the target language (Mowlaie & Rahimi, 2010).

Despite the primary focus on meaningful interaction in the communicative approach, the dominant content of the interaction in the observed classrooms is language; namely language from. That is, these classrooms lack meaningful communication and the students learn about the usage of the language rather than using the language as an instrument to convey some kind of meaning or to accomplish a task in a meaningful way. An average Turkish student wants to get explicit grammar instruction, and to be checked strictly by his teacher (Çelik, 2006). Moreover, Phipps and Borg (2009) state that language teachers in Turkey tend to adopt a ‘focus-on-forms’ approach in their language instruction. Such a tendency mainly stems from the common grammar-based discrete point testing methods which confront both teachers and students with a dilemma between the
communicative approach and the traditional teaching methods (Ngoc & Iwashita, 2012). Specifically for high schools in Turkey, teachers feel the responsibility of preparing their students for the university entrance exam which is made up of multiple choice question items. When they attempt to implement a new methodology and to prepare their students for such a traditional test, they do not have enough time to achieve both. This also conduces teachers to focus on form, vocabulary and particularly reading comprehension by using multiple choice tests to enhance their teaching (Alptekin & Tatar, 2011; Demir & Demir, 2012; Yigit, Kiyici & Cetinkaya, 2014).

The communicative approach aims to give learners more control and autonomy of their own learning via student-centered group work activities and the chance to control the content of the classroom instruction. However, in the observed classes, the content of the instruction is mainly determined by the teacher and occasionally by the teacher and the learners together, but never merely by the learners. Therefore, the teacher is regarded as the expert in the classroom by both the students and the teachers themselves. This is also consistent with the participants’ opinions about error correction, teacher and learner roles. Likewise, in Tok’s (2010) study, the language learners preferred explicit grammar instruction and correction provided by the teacher. All such perceptions might create a tendency to give the control of everything to the teacher in the classroom. The previous learning experiences focusing on traditional and grammar-based methods might induce teacher-dependent learners who avoid taking the responsibility of their own learning (Karakaş, 2013).

Moreover, the results have shown that the student modality is distributed almost equally among the four language skills in the Anatolian high school whereas in the general high school the only modality is writing which is not a contextualized, meaningful or creative writing, but rather copying the discrete grammar exercises into the students’ notebooks.

The communicative approach recommends the use of contextualized, authentic or authentic-like materials with audio visual components which will engage learners in purposeful and meaningful use of language (Newby, 2015). However, the most frequently used material in both classrooms is minimal texts prepared by non-native speakers. Almost no extended texts or authentic materials have been used in these classes. The course book provided by the MNE has also been avoided by the teachers claiming that the level of the book is not suitable for their students. The students also agree with their teachers on the suitability of the book. Similarly, the research on different course books provided by the MNE for language learners in different levels and grades has shown that these materials do not promote communicative targets, or support learner-centeredness and student autonomy and that they do not include realistic and motivating content, and that there is a need for English course books to construct student-centered and student-initiated activities (Haznedar, 2009; Karababa, Serbes & Sahin, 2010; Isik, 2011; Saricoban & Can, 2012; Basal, Celen, Kaya & Bogaz, 2016).
The communicative approach values the important benefits of the native language knowledge since the research has proven that important amount of conceptual knowledge and skills is transmitted across languages (Spada, 2007). The most of the participants also consider the advantage of using their native language while teaching or learning grammar structures since it would be harder and more time-taking to understand such structures in the target language, but they prefer using the target language for meaningful and communicative activities.

In conclusion, the extent to which the Communicative Approach is being utilized in the lessons highly varies according to the teacher and the teaching context. Despite the students’ similar attitudes, beliefs and expectations about their language learning, there is not a standard in their learning practices as opposed to the requirements of the general curriculum provided by the MNE. This appears to be mainly due to the discrepancies in the teachers’ perceptions of their learner profiles, teaching preferences and so their teaching philosophies.

In order to adopt the communicative approach successfully in EFL countries like Turkey, the change and the employment should be steady and the countries’ particular EFL contexts and the teachers’ perceptions of an innovation should be considered. Also, changes should be done by considering students’ previous educational habits and so non-English speaking countries should combine communicative and non-communicative activities in English lessons since combining the communicative approach with traditional teaching techniques is advantageous for EFL students. Moreover, pre-service and in-service teacher training programs are not sufficient enough for teachers to implement such an innovation in actual teaching contexts; therefore, continuous teacher training and teacher development opportunities focusing on real classroom applications, especially within the crucial first few years of the innovation period are needed to support the application of any innovation in a curriculum.

9. Sınıf İngilizce Sınıflarında İletişimsel Yaklaşımın Kullanımı

Atıf:

Özet

1960'ların sonlarında ortaya çıkan iletişimsel yaklaşımın odağında belirli bağlamlarda anlamın kişiler arasında iletilmesini, yorumlanmasını ve müzakere edilmesini sağlayan iletişim edinci yer almıştır. İletişim edinci; dilbilgisi edinci, söylem edinci, strateji edinci ve toplumsal dil edinci gibi alt faktörlerden oluşmaktadır. Bu yetilerin kazanılması ve öğrenmenin desteklenmesi için bireyin gerçek iletişime dayalı, dili anlamlı görevleri yerine getirmek için her türlü araç ve strateji ile öğrencilere verilen görevi tamamlayarak hızla ulaşmak için dili pragmatik, otantik ve fonksiyonel bir şekilde kullanabilmelidirler. Bu nedenle, iletişimSEL etkinliklerde dil, verilen görevi tamamlamak üzere bir araç olarak kullanmalıdır.

Öte yandan, iletişimsel yaklaşım uygulamalarının özellikle öğretmenlerin bu yöneme ilişkin anlayışlarına bağlı olarak çeşitli gösterdiği, öğretmenlerin hem bu yöneme karşı algılarının birbirlerinden farklı olduğu hem de algıları ile gerçekleştik uygulamalarının tuta başladığı görülmektedir. Bu da, eğitim-öğretim uygulamalarındaki değişikliklerin uygulanmasında öğretmenlerin önemli bir faktör olduğunu ortaya koymaktadır. Aynı durum, Türkiye’deki yabancı dil öğretimi uygulamalarına için de geçerlidir. Özellikle uzun süreli yerleşmiş öğretim uygulamalarına sahip olan öğretmenler için alışkanlıkları yeni bir yaklaşılma
değiştirmek kolay bir iş değildir. Bu nedenle, program metinlerindeki teorik değişimlerin uygulamada arzu edilen değişimleri garanti edecekini varsaymak mümkün değildir.

Araştırmanın Amacı: Bu çalışmanın amacı da MEB (Milli Eğitim Bakanlığı) tarafından okullara ücretsiz olarak dağıtılan ders kitaplarının kullanıldığı 9. sınıf İngilizce derslerinin ne kadar iletişime dayalı olduğunu belirlemek ve mevcut durumu öğretmen ve öğrenci açısından incelemektir.

Araştırmanın Bulguları: Araştırmanın bulguları, gözlem yapılan sınıflarda iletişimin çoğunlukla öğretmen ile öğrenciler ya da sınıf arasında geçtiğini, öğrencilerin birbirleri ile iletişiminin hemen hemen hiç olmadığı, iletişimin içeriğinin çoğunlukla dilbilgisi üzerinde odaklandığını, bu içeriğin de basın şeklinde öğretmen tarafından belirlendiğini, öğrencilerin hemen hemen hiçbir zaman kendi kendi kendi kendi için içerik seçme şansına sahip olmadığını, özellikle genel lise için dört dil becerisinden sadece yazma becerileri üzerinde durulduğu ve sınıf içinde kullanılan materyallerin büyük ölçüde anadili İngilizce olmayan kişiler tarafından hazırlanmış, minimal metinlerden oluştuğu, otantik materyallere hiç yer verilmediği ortaya koymaktadır. Buna karşın, öğretmen ve öğrencilerle yapılan görüşmeler; öğrencilerin birbirleri ile iletişimin kültürlerin imkan veren grup çalışmalarını dil öğrenme süreçleri için yararlı bulduklarını, bir dili akıcı konuştırmayı önemdediklerini, yeniden ya da zor dilbilgisi kalplarının öğretiminin dışında hedef dil olunmasına istediklerini, hatalarının iletişimi kesmeyerek sıkı şekilde ve genellikle öğretmen tarafından düzeltmesini tercih ettiklerini, öğretmenin dil öğretimi sırasında iyi bir rol model olmakla, öğrencinin de sorumluluklar yerine getirerek bu modeli izlemekle yükümlü bulduklarını, iletişimin temeli olarak görülen konuşma becerisini önemdediklerini ve sınıfta kullanılan ders kitabını seviyelerine uygun olmadığı için yararlı bulmadıklarını göstermektedir.

Araştırmanın Sonuçları ve Önerileri: Araştırmanın sonuçları, öğrenciler arası iletişimi destekleyen grup çalışmalarının yararlarına olan inanca rağmen sınıf içinde daha çok

 Anahtar Kelimeler: İngilizce öğretimi, öğrenci görüşleri, öğretmen görüşleri, sınıf içi gözlem.
