### **Abstract**

This study aims to describe referential devices, substitution ellipsis, and conjunction in qira'at (the reading) text of Al-Arabiya Baina Yadaik (ABY) II book. This research uses a qualitative method in an appropriate setting with a grammatical cohesion analysis approach to identify the grammatical elements from a reference perspective within the qira'at text in the ABY II book. The obtained data subsists of grammatical cohesion, including referential devices, substitution, ellipsis, and conjunction in qira'at (the reading) text. Due to the limited research time, there were only eight qira'at texts, from wihdah (unit) 1-8 of the ABY II book, explored in this research. The results indicate that (1) the referential devices in the qira'at texts is personal (subsisting of third-person singular 'mufrad', dual 'mutsanna', and plural), demonstrative ( the word **لَكَ**) and comparative (the words that compare sentences); (2) the identified substitution devices are nominal and clause substitution; (3) the discovered ellipsis devices are nominal, verbal and clause ellipsis; and (4) the found conjunction devices are temporal, causal, additive, and adversative.

**Keywords:** conjunction, grammatical cohesion, reference, substitution ellipsis

## A. Introduction

Language acquires a substantial role for humans in communicating with their surrounding society. It always presents in human's daily life, as their means to express an idea, thought, opinion, and feeling. Language appears as the most critical medium to articulate those needs. In their daily communication, humans use language as maximum as possible to attain the desired communication. Besides, language is also closely related to discourse. Through a language, discourse can be the object of reflection and expression of someone's feelings. Soeparno (2002:1) describes language as an arbitrary system of the sound pattern used by a member of society to incorporate, interact, and identify themselves.

Discourse is part of language embodiment as the writer's inspiration to communicate their ideas. Besides, the close relationship between language and discourse appears because discourse can serve as a voice of feelings and reflection for the writer. The language participants realize interaction and social communication through an excellent written and spoken discourse. Perfect and proper discourses prohibit misunderstanding among language participants.

In addition, discourse is the complete spoken language unit. The examples of spoken discourse are speech, lecture, sermon, and dialog. Meanwhile, the examples of written discourse are novels, short stories, letters, books, and written documentation. Thus, the qira'at (reading) text in *Al-Arabiyyah Baina Yadaik* (ABY) is also one of the discourse forms.

*Al-Arabiyyah Baina Yadaik* (ABY) book is an Arabic learning book for the non-Arab learner. This book has three volumes for beginner, intermediate, and advanced learners. Each work is also equipped by recording files for both teacher and learner. Many Islamic Universities in Indonesia use this book in their Arabic learning.

ABY book is developed with excellent systematic learning that facilitates the learner to study and comprehend Arabic easily. The book aims to help the learner to master the language, communication, and cultural-understanding skill. In relation to language ability, all language skills are provided in the book, including the qira'at (reading) skills.

The texts investigated in this study are qira'at (reading) text in ABY II books since (1) students are familiar with some vocabularies from ABY I book, (2) students have recognized types of Arabic sentences, and (3) students have known Arabic punctuation marks. As a discourse, the texts consist of words, phrases, clauses, and sentences that form cohesive and complete information. In the writing process of a discourse, the use of cohesive devices that is semantically related to discourse elements should be considered.

The association of sentences in a discourse can be carried out through devices or mediums; one of them is grammatical cohesion. Mulyana (2005:26) mentions that grammatical cohesion is a discourse element that consists of intact and stable linkages of words or sentences. At the same time, the grammatical cohesion components include reference, substitution, ellipsis, and conjunction.

Some principles should be regarded in comprehending a discourse text. Those principles are unity and coherent. In other words, the fundamental point of discourse is clauses or sentences that express careful thought. A discourse should possess coherent information and comprehensible supporting elements. A coherent discourse is cohesive if

it is seen from the relation of form or structure and coherent if it is seen from the association of meaning or structure. A complete discourse has sentences that promote a topic, while a cohesive discourse has systematically arranged sentences that present a coherent idea marked by coherent devices.

From the aforementioned information, the elements that formulate discourse cohesion should be continuous and form a single text structure. An unclear sequence of progression creates an ambiguous and incoherent discourse. Besides, statements with an obscure order are not a discourse. The cohesiveness of discourse is essential since it upholds its coherence. Halliday & Hasan (1992: 65) explain that the necessary assistance for a coherent discourse comes from cohesion, the language source devices of every language that function as textual metafunction to correlate every part of the text.

In addition, the coherence of discourse is also realized through the situational context, outside the language formality aspect. Halliday & Hasan (1992: 66) state that every part of the text manifests the meaning and the context of the text; thus, we all have to be aware of those functions.

Contextual understanding is essential in discourse since text and context are in one unity that cannot be detached. Context can differentiate the discourse that is used as the language used in communication, and those used not for communication purposes. It is also supported by Halliday & Hasan (1976: 20), that a text cannot be evaluated with no information on its situational context.

Another similar study has been conducted by Aimanah (2016), entitled "Cohesion and Coherence of Arabic Reading Text from Ministry of Religion Book for 10 Grade Senior High School Students and Its Impacts on Arabic Learning." That research finds excellent cohesiveness from a cohesive and coherent perspective within the Arabic textbook for 10 grades from the Ministry of Religion. It is demonstrated from the realization of cohesive and coherent elements in the five texts being investigated.

Besides, Wiyanti (2016) conducts research entitled "Analysis of Grammatical Cohesion Substitution and Ellipsis on 'Laskar Pelangi' Novel by Andrea Hirata." This study reveals uneven usage of language elements, such as sentence, phrase, clause, and sentence, as a referrer for two paired sentences.

Another study has also been carried out by Zulaiha (2014) on the grammatical and lexical cohesion in Jemini novel by Saparto Brata. The results indicate that grammatical cohesion markers found are reference, including personal reference I, II, and II; demonstrative reference of time and place; comparative reference; substitution; ellipsis; and conjunction, involving coordinative, subordinative, sequence, additional, consensive, clause, optional, time, contradiction, purpose, and exceptional conjunction. At the same time, the lexical cohesion marker found includes epizeukis and anadiplosis repetition, synonym, antonym, hyponymy, and equivalences.

There are similarities and differences among those previous studies and this study. The similarity is in the theoretical framework used, the grammatical cohesion. Meanwhile, the difference is in the object being investigated. Therefore, this study entitled "Analysis of

Grammatical Cohesion on Qira'at (Reading) Texts in *Al-Arabiyyah Baina Yadaik II*" was carried out.

## B. Research Methodology

This research uses qualitative or ethnographic methods (Bogdan & Biklen, 1982:2-3) in an appropriate setting with a grammatical cohesion analysis approach to reveal the grammatical elements from a reference perspective within qira'at texts in the ABY II book. The instrument used in the data collection process was the researchers, as it used a qualitative approach. The researchers, as the key instrument, reveal the grammatical cohesion devices, including reference, substitution, ellipsis, and conjunction in qira'at (reading) text in the ABY II book. Further, the researcher in this qualitative study also planned, collected the data, analyzed the data, interpreted the data, and reported the research results (Moleong, 1998: 121).

The data was obtained to solve the research problems in the form of grammatical cohesion devices that subsist of reference, substitution, ellipsis, and conjunction in qira'at (reading) text. Due to the limited time, only eight qira'at texts, from *wihdah* (unit) 1-8 from the ABY II book are being investigated. In this qualitative research, the data was obtained through document analysis to find grammatical cohesion devices, including reference, substitution, ellipsis, and conjunction within the qira'at (reading) text. The already seen grammatical cohesion was noted in a table specially prepared for this process so that the data can be easily read.

Data analysis in this research was carried out along with the data collection process. The analysis model was adapted from Miles et.al, consisting of (1) data condensation, (2) data presentation, and (3) drawing conclusion (2014). The analysis process was conducted circularly. In other words, after the conclusion is made, another data collection process can be carried out until a valid and similar finding is made. Thus, in the initial process, the researcher made open hypothesizes to be confirmed through relevant data being analyzed in the next step. This way, research results that fulfill particular validity requirements (transferability and dependability) can be obtained. The researchers used some techniques to obtain valid data and results. First, the researcher conducted a research extension, two days a week, for six months. Second, the data was analyzed continuously and systematically. Third, the researchers carried a discussion with colleagues who are experts in the research contents and methodology. Fifth, the researchers analyzed negative cases. Lastly, an assessment of reference adequacy, both in literal reference and subject action, was conducted.

## C. Findings

In this research, eight qira'at texts from ABY II books, units 1 to 8, were selected. Due to the limited time, only one text was chosen from each unit. The title of those texts is *وينب لهم اذا فيض لب عض الناس الى اقبى المدن الليبرية؟*, *هل تحدث مشر كمال تبين الزوجين*, *لأواع التريح*, *وجري مصقبتان* *والعربي في مصر ح وأثره* and *لأحرب لولس الم*, *عمل المرأة* *الخطي في ال مضي* *ولأحضر*. The obtained results

from grammatical cohesion analysis within qira'at (reading) text in *Al-Arabiyyah Baina Yadaik II* book are explained below.

### 1. Referential Devices in Qira'at Texts in ABY II Book

Reference is one of the grammatical cohesion devices. Halliday & Hasan (1976: 89) mentions that reference is the relation between meanings within the linguistic system in grammatical steps. Reference (الإحالة) is a symbol that point to particular language element located before or after the reference. There are three types of reference cohesion, namely, personal, demonstrative, and comparative.

#### a. Personal Reference

According to Emzir (2011: 13), a personal reference is stated by the pronoun and determinator that function to show an individual or object mentioned within the text. Besides, Alwi et al. (2000: 249) mention that a personal pronoun is a pronoun used to refer to a person. This pronoun can point to one-self (first personal pronominal), the people someone talks to (second personal pronominal), and the person being spoken of (third personal pronominal). From the analysis results obtained on units 1 and 5, the obtained data is:

- 1- زينب ومريم صديقتان، تتشابهان في أشياء كثيرة، فيما تسكنان في حي واحد
- 2- ومن ناحية أخرى، يستطيع الطالب أن يتعلم، وهو في بيته عن طريق الشبكة الدولية

In the first (1) sentence, هم word that refers to Zainab and Maryam. Data (1) has a third personal pronominal. This third personal pronoun in a cataphoric manner refers to the constituent in the prior words, Zainab and Maryam. Meanwhile, on (2) sentence, the word هو refers to the word الطالب. Pronoun هو is the third-person singular pronoun.

In Indonesian, the personal pronoun is only classified into a singular (*mufrad*) and plural (*jama'*); there is no second (*mutswana*) personal pronoun. Therefore, the expression of the third personal pronoun, two people use the word "they" is added with "both of them," the synonym of "they" that is commonly used for III personal pronouns.

The third هم and second هو personal pronoun can be appropriately interpreted if they are linked to the previous sentence. Based on that relation among sentence in the discourse, the pronoun هم and هو are anaphorically referred to Zainab and Maryam for هم and for الطالب.

The relation between هم, هو with Zainab and Maryam, along with الطالب makes the discourse has definite and reinforcing meaning.

#### b. Demonstrative Reference

Demonstrative reference cohesion is symbolized by determinator and adverb that function as an indication of text elements, from a location perspective (Emzir, 2011:13). Within the ABY II book, several points were obtained in relation to demonstrative reference in the units, as explained below":

1- لم تمارس زينب الرياضة، ورغم ذلك ظلت نحيفة

In the (1) sentence, the word "that" is anaphorically referred to as the previous sentence. The demonstrative pronoun *ذلك* is placed after the overlooked sentence and operates as an affirmation. It affirms that Zainab does not do exercises, but she is still thin.

### c. Comparative Reference

Comparative reference is marked by adjectives and adverbs that operate to compare elements from an identity and similarity perspective (Emzir, 2011: 13). The comparative reference data found in the ABY II book is:

فزينب نحيفة جدا، ومريم سيمنة جدا

Within the above sentence, there is the word "skinny" for Zainab and "plump" for Maryam. Meanwhile, another sentence with comparative reference is also found in unit 5.

كان طلاب العلم - في الماضي - يسافرون من بلد إلى بلد، لطلب العلم، وكانوا يواجهون في سفرهم كثيرا من التعب؛ فكانوا يركبون الجمال أياما وأشهرًا. أما ليوم، فالمدارس والجامعات كثيرة، في كل مدينة وقريّة تقريبا، حيث يذهب الطالب إلى مدرسته، أو جامعته بالسيارة، أو سيرًا على الأقدام. ومن ناحية أخرى، يستطيع الطالب أن يتعلم، وهو في بيته عن طريق الشبكة الدولية.

The text explains a comparison between learners in the previous and recent eras. The writer contrasts that learners in ancient times walked from one to other cities that required a long period and carried extreme exhaustion. However, in the recent era, each city and village has a lot of schools and universities. Thus, learners no longer need to walk far away.

Another form of comparative reference is using the "ك" device, as also found in Unit 5, *إلى يوم لئلا ماء وال هواء*, It means 'knowledge is similar to water and air. The word *ك* compares between knowledge and the air.

### 2. Substitution Devices in Qira'at Text of ABY II Book

Halliday (1981) in Nunan (1987: 6) combines the explanation of substitution and ellipsis since this two cohesion is basically similar. Ellipsis is perceived as a part of substitution that replaces the original form with the empty form. There are three types of substitution and ellipsis, namely nominal, verbal, and clause substitution or ellipsis.

#### a. Nominal Substitution

يعيش في المدن الكبيرة، مثل: طوكيو. ولندن، ونيويورك والقاهرة

The word "big cities" in the sentence above represents big cities, such as Tokyo, London, New York, and Egypt.

#### b. Clause Substitution

في الحياة الزوجية خير كثير للزوجة وللأولاد. ومع ذلك تظهر

The word "they are all" in a sentence (2) refers to the previous sentence.

### 3. Ellipsis Devices in Qira'at Text of ABY II Book

Essentially, the ellipsis is a remedy by changing the main item with a blank thing (Suwandi, 2008: 133). According to Renkema (2004: 103), the ellipsis is removing or relieving a word or a part of a sentence. The results of data analysis revealed three types of ellipsis that appear in the ABY II book, namely nominal, verbal, and clause ellipsis.

#### a. Nominal Ellipsis

Alwi et al. (2000: 415) argue that one of the syntax devices that reduces redundancy is ellipsis. The same unremoved element is called the antecedent of the removed part. The removal of antecedents before the eliminated element is named anaphorical removal; meanwhile, the extraction of antecedents that follow the eliminated element is cataphoric. The identified data related to a nominal ellipsis is mentioned below.

زينب ومريم صديقتان، تتشابهان في أشياء كثيرة.

In the above example, the ellipsis occurs in the sentence that is replaced by the تشابهان form of the nominal phrase of زينب ومريم. If the sentence is not modified, then there will be a redundant use of the word زينب ومريم. The writer should have a particular aim for avoiding the subject repetition. This modification is known as anaphoric.

#### b. Verbal Ellipsis

زينب تفكر كثيرا في هذه المشكلة، ماذا تفعل؟ وزنها الآن خمسة وخمسون كيلا.  
هل تعمل المرأة خارج بيتها أم لا تعمل؟ يختلف الناس في الإجابة

#### c. Clause Ellipsis

يحتاج كل إنسان إلى أن يعيش في أمن وسلام، ومع ذلك تحدث الحروب في كل مكان من العالم

### 4. Conjunction Devices in Qira'at Text of ABY II Book

Conjunction is included in cohesion since it indicates a relationship that is only comprehensible if there is a reference to the other part of the text. There are four relations that are identified by conjunction, namely temporal, causal, additive, and adversative. Within the ABY II books, several conjunction devices were found.

#### a. Temporal Conjunction

Temporal conjunction is a conjunction that explains a relation among two different occasions. This conjunction possesses a close association with time. It functions to demonstrate the chronology of an event, in order that the sentence can be easily understood. There are two types of temporal conjunction, namely equal and unequal.

Equal temporal conjunction has the same or equivalent features. It cannot be placed at the beginning or at the end of a sentence; it should be put in the middle. The comparable temporal conjunction data found in the ABY II book are presented below.

1- وقد أدركت بعض الدول هذه المشكلة، مشكلة الهجرة من الريف إلى المدينة، فبنت مصانع كثيرة في الريف.

2- يفضل كثير من الناس القراءة، ففيها فائدة ومرتعة

In example 1, there is a temporal conjunction ف "than/then." That word exhibits the chronological order completed by the subject (some countries). At the same time, in example 2, the temporal conjunction ف "because" shows the chronological order of human reading activity. By those two temporal conjunctions, the context of a sentence and its relation with the previous sentence can be easily understood.

#### b. Causal Conjunction

Based on kbbi.web.id site, causal means relating or operating as a cause. Causal conjunction is a conjunction that connects two words, phrases, clauses, or sentences with causative relation. In other words, it explains an event that occurs because of an originator. The words 'since' and 'because' are frequently used as a conjunction. The example data for this type of conjunction is presented below.

يولد سكان المدن كل يوم، لأن سكان الريف في هاجرون إلي ها.

In the above example, the causal conjunction لأن is used as the cause of the previous sentence.

#### c. Additive Conjunction

Additive conjunction (combination) is a coordinative conjunction that operates to combine two similar words, phrases, clauses, or sentences. The example of this conjunction is and, moreover, besides, and also.

وينب هري مصر قويتان.

#### d. Adversative Conjunction

Adversative conjunction marks a relation of contradiction or differences. The adversative conjunction identified in the ABY II book is presented below.

وليس ال هدف من الترويح قتال الوقت، وإنما ال هدف قضا الوقت في أش طحيده.

The aim of refreshing is not to waste time, *but* to use the time for meaningful activities.

The use of adversative conjunction إنما marks a contrast with the previous sentence.

### D. Discussion

#### 1. Reverential Devices in Qira'at Text of ABY II Book

The reverential devices discovered in the ABY II book are personal, demonstrative, and comparative references. Based on the results of data analysis from the ABY II book, the identified personal reference includes the third person singular (*mufrad*), second (*mutsanna*), or plural.

In Arabic, there is a personal pronoun known as *ism dhamir*. *Ism dhamir* is divided into two, a stand-alone word is known as *dhamir munfasil* (separated personal pronoun) and as a suffix placed in a noun, verb, or preposition known as *dhamir muttasil* (attached personal pronoun). The stand-alone personal pronoun is divided by the amount and gender difference, as presented in the table below.

Personal Pronoun	Gender	Number		
		Singular	Dual	Plural
First	Male and Female	أنا		نحن
Second	Male	أنت	أنتما	أنتم
	Female	أنت	أنتما	أنتن
Third	Male	هو	هما	هم
	Female	هي	هما	هن

In addition, *dhamir muttasil* is not a stand-alone personal pronoun. It is attached with other words, such as noun (*isim*), verb (*fi'l*), and particle or letter. At the same time, the clitic pronoun (*dhamir muttasil*) acts as an object (*maf'ul bih*), complement, and explanation.

The first and second personal pronouns were not found in the discourse text since the text is not a dialogue. The usage of the personal pronoun in the communication process is the manifestation of a variety of written language. Language variety is divided into written and spoken types of language. This variety belongs to the humane characteristic of a language that represents language function as a spoken communication tool in delivering information. The personal pronoun is frequently found in both spoken and written communication. The usage of this pronoun in spoken communication is exhibited through the direct interaction among speakers. Besides, in written communication, this pronoun is observed in discourse text.

The division of personal pronouns in Arabic is different from its division in Indonesian. In Arabic, the personal pronoun is divided based on the number, person, and gender. In contrast, the personal pronoun in Indonesian is divided into singular and plural. The pronoun found in the discourse text of the ABY II book is third-person singular, dual, and plural, as presented in the example below.

زينب ومريم صديقتان، تتشابهان في أشياء كثيرة، فهما تسكنان في حي واحد

Substantially, each sentence carries an occasion that involves one or more participants with different semantics (Alwi et al., 2014:341). It shortened and solidified the sentence, Arabic grammar of *dhamir* (personal pronoun) appears. The personal pronoun is used to shorten statements, such as *هن مشابهان* (they are 'female' similar). Besides, it is also used in imperative sentences that frequently only consisted of the primary verb (Chaer, 2008:197). That is because the sentence has already had a subject, but if the subject is special, then it should be mentioned.

In addition, the demonstrative reference found in the texts of ABY II books is the word *ذلك* It is discovered in the sentence *وَرغَمَ ذلكَ ظَلَّتْ نَجِيبةٌ* Within that example, the pronoun *ذلك* anaphorically refers to the previous sentence. Meanwhile, the comparative reference found in the book compares words and sentences.

## 2. Substitution Devices in Qira'at Text of ABY II Book

Two types of substitutions were identified in the discourse texts of the ABY II book, namely nominal and clause substitution. The nominal substitution was found in the example presented below.

يُحْيِي شَفِي المَدِينِ العَظِيمَةِ. نَمَلِ طَوِيصُو، وَلِنَدِن، وَيِي يورِكِ وَلِقَامِرَة

The sentence *المَدِينِ العَظِيمَةِ* (big cities) is explained in details in the next sentence by mentioning the cities names, such as Tokyo, London, Newyork, and Egypt. Those cities are considered substantial since a large number of domestic and international tourists visit them. Mesir. Meanwhile, clause substitution is discovered in the sentence presented below.

فِي المَدِينِ العَظِيمَةِ وَفِي المَدِينِ العَظِيمَةِ وَفِي المَدِينِ العَظِيمَةِ ...

The phrase *ذلك* in the above sentence, functions as an anaphoric substitute of the clause *فِي المَدِينِ العَظِيمَةِ* and so forth. The meaning of the aforementioned sentence is that family life carries a positive effect on wives and children, yet it may also lead to problems. Thus, the writer uses that substitution to create a coherent discourse.

## 3. Ellipsis Devices in Qira'at Text of ABY II Book

Ellipsis or removal is one of the grammatical cohesion types that removes a particular lingual unit that has been stated before (Wiyanti, 2016: 193). Within the ABY II book, three types of ellipsis devices were identified, namely nominal, verbal, and clause ellipsis.

The presence of ellipsis in the discourse texts of the ABY II book is related to the context. Context refers to the internal aspects of a text and all elements that cover the text. Generally, context is divided into language and non-language contexts. The language context is frequently referred to as context, while the non-language context is known as situational and cultural context. The comprehension of the situational or cultural context of a text can be obtained through various interpretations and analogy principles (Wiyanti, 2016: 193). Sumarlan (2003: 48-51) mentions that those principles are personal interpretation, locational interpretation, temporal interpretation, and analogy interpretation principles.

## 4. Conjunction Devices in Qira'at Text of ABY II Book

A conjunction is a word that associates words, phrases, clauses, sentences, or paragraphs. The example of conjunction that connects words and phrases are so that, and, or, for, when, since, before, meanwhile, but, because, with, if, then, as well as that. The example of conjunction that relates paragraphs is in addition, besides, and as for (Rusminto, 2009: 33).

The conjunction devices found in the ABY II book are temporal, causal, additive, and adversative. Therefore, discourse text requires a conjunction to connect words, phrases, clauses, and sentences. In Arabic, the conjunction is known as *Athof*. *Athof* is the type of *tawabi* (following) after the *athhof* (conjunction) word that connects *isim* (noun) or *fi'il* (verb) (Masiv, 2013).

Similar to conjunction in Indonesian, *athof* connects words in a sentence, as well as connects sentences and paragraphs. By using *athof*, the language units are combined into an integrated grammatical unity. Besides, it also creates a diversified meaning. That variation of meaning reflects distinct messages and issues in human lives, as the language user (Masiv, 2013).

Book and or textbook is essential in Arabic teaching and learning. As stated by (Tajuddin et al., 2020; Thohir et al., 2020) that one of the urgent sources in the process of language learning activities is a textbook as a mandatory handbook for teachers and students. Fauzi & Zakiyah (2021) add that in this multidiscipline era, the integration-interconnection paradigm is undeniable, including in the textbook. One of the efforts to realize Arabic learning, which contains the value of integration-interconnection, is compiling Arabic textbooks with integration-interconnection values.

## **E. Conclusion**

According to the analysis and explanation discussed before, it can be concluded that: The reverential devices type in qira'at texts of the ABY II book is personal, demonstrative, and comparative. The personal reference is in the third person singular (*mufrad*), dual (*mutsanna*), or plural. At the same time, the demonstrative devices used are the word *ذلك*, and the found comparative device is the word that compares sentences. The substitution devices identified in the qira'at text of the ABY II book are nominal and clause substitution. The ellipsis devices discovered in the qira'at text of the ABY II book are nominal, verbal, and clause ellipsis. The conjunction devices found in the qira'at texts of the ABY II book are temporal, causal, additive, and adversative.

Based on the aforementioned results, some suggestions are generated. First, the lecturer of *qira'ah muwasa'ah* course should consider the cohesion and coherence of the text, besides its *nahwu* and *sharf* (morphology). Second, future researchers are expected to conduct a similar study on the coherence aspect.
