High-ability students have unique academic, cognitive, and social needs. Many bright students need more academic challenge than they are receiving in their education, and they need more opportunities to develop their talent. Yet many states and school districts have no formal policies that address the desirability of acceleration or specify the procedures to be followed in making decisions about acceleration for particular students. Absence of a formal policy might invite inconsistent practices that could
As an educational intervention, academic acceleration is decidedly effective for high-ability students. The research support for acceleration that has accumulated over many decades is robust and consistent and allows us to confidently state that carefully planned acceleration decisions are successful. Both grade-based and content-based acceleration are effective interventions in academic and social-emotional domains for high-ability students. Grade-accelerated students generally outperform their chronologically older classmates academically, and both groups show approximately equal levels of social and emotional adjustment. Accelerated students should be expected to achieve, relative to their new grade peers, at a high level that is generally comparable to their performance in the previous grade. Such students are typically among the top 10% in a class, and they should be expected to remain in the top 10% throughout their academic careers. To be clear, there is no evidence that acceleration has a negative effect on a student’s social-emotional development. Each school district should have a written acceleration policy stating that acceleration is an appropriate and effective intervention for select highly able students who have demonstrated high performance in one or more academic areas. The policy should be characterized by accessibility, equity, and openness. It should provide guidelines for the implementation of acceleration, including administrative matters, to ensure fair and systematic use of accelerative opportunities and recognition for participation in those accelerative opportunities. Finally, the policy should provide guidelines for preventing nonacademic barriers to the use of acceleration as an educational intervention and include features that prevent unintended consequences of acceleration.
even discourage acceleration, as is the case when early entrance to kindergarten, early high school graduation, or whole-grade acceleration are explicitly prohibited. The existence of an acceleration policy helps to ensure that students have their academic needs addressed.

Acceleration is “progress through an educational program at rates faster or at ages younger than conventional” (Pressey, 1949, p. 2). In a position paper, the National Association for Gifted Children (NAGC, 2004) added nuances to the definition of acceleration: “allowing a student to move through traditional educational organizations more rapidly, based on readiness and motivation” (p. 1).

Academic acceleration is an empirically validated educational intervention for high-ability students (Colangelo, Assouline, & Gross, 2004). The research consistently demonstrates the academic benefits to students and allows the conclusion that students are not negatively affected in the social-emotional domains.

An acceleration policy is a means to guide individual districts in implementing acceleration practices. A policy must promote awareness and adoption of sound accelerative practices. The research-based guidelines for developing an academic acceleration policy proposed here can serve as a concrete tool to guide policy makers, school administrators, and educators to create or modify policies at the state and/or school district levels.

Many schools have policies relating to gifted education that specify how to identify and serve gifted students and how to evaluate gifted education programs. However, gifted education policies don’t necessarily specify how to identify and serve students for acceleration; in fact, some policies inadvertently endorse an enrichment approach to serving gifted students and thus acceleration is not presented as an option. An acceleration policy and recommendations for acceleration are not intended to take the place of enrichment opportunities. Some students will be served best by enrichment, some by acceleration, and some by a mix of the two (Neihart, 2007; Rogers, 2002; Schiever & Maker, 2003). The policy should complement existing gifted and talented programming and services. Acceleration is not a replacement for
gifted education services or programs. Rather, acceleration (and an acceleration policy) contributes to a broad, comprehensive gifted and talented program.

Whether the acceleration policy stands alone or is incorporated into the gifted education policy, it should clearly state that participation in a school’s gifted education program is not a prerequisite for consideration of acceleration as an educational intervention. Some schools may not have a gifted and talented program. It is also possible that a student might not qualify for a school’s gifted and talented program because he or she did not obtain a qualifying composite score. Students with an uneven profile of achievement scores (significantly advanced in one area but not others) are not likely to obtain a qualifying score but may be served well by content acceleration in their area(s) of strength.

Categories, Forms, and Types of Acceleration

Acceleration is a broad term that encompasses many accelerative options. To help organize these options and encourage a common vocabulary for discussing them, we have classified the accelerative options into categories, forms, and types.

Categories are the broadest and most encompassing level of classification. The two broad categories of acceleration are content-based and grade-based (Colangelo et al., 2004; Rogers, 2004). The primary distinguishing feature between content-based acceleration and grade-based acceleration is whether the accelerative intervention shortens the number of years that a student spends in the K–12 system.

The categories of acceleration have specific forms, or ways of varying the level, pace, and complexity of the curriculum. For example, single-subject acceleration, dual enrollment, and Advanced Placement coursework are all forms of content-based acceleration. Whole-grade acceleration and early entrance to school are forms of grade-based acceleration.
Some forms of acceleration have an additional level of specification, which is the *type*. Types are specific variations of practicing a particular form of acceleration. For example, single-subject acceleration (*form*) can be implemented by providing advanced content to an elementary student in a middle school or high school classroom (*types*).

**Framework for Acceleration Options**

**Content-based acceleration.** These strategies provide students with advanced content, skills, or understandings before the expected age or grade level (Southern & Jones, 2004b). Students typically remain with peers of the same age and grade for most of the school day but receive higher grade-level instruction in an advanced grade. Content-based acceleration can also refer to allowing a student to work on higher grade-level instruction in his regular classroom in lieu of grade-level instruction.

*Examples of the forms (and types) of content-based acceleration.* The *forms* of content-based acceleration include single-subject acceleration, curriculum compacting, dual enrollment, credit by examination or prior experience, Advanced Placement and International Baccalaureate programs, and talent search programs.

*Single-subject acceleration.* Single-subject acceleration includes many *types*, which include:

- A third-grade student performing above grade level in reading and math goes to a fourth-grade teacher every morning for instruction in these subjects and returns to the third-grade classroom for instruction in other subject areas.
- A musically gifted sixth-grade student is enrolled in a high school instrumental music course and returns to the sixth-grade classroom for instruction in other subject areas.
- A group of fifth-grade students performing above grade level in math is transported to a junior high building every morning for a seventh-grade pre-algebra class. The students are transported back to the elementary school building for instruction with their fifth-grade classmates for the remainder of the day.
• A high school math teacher travels to a middle school to provide instruction to a group of middle school students who perform above grade level in math. The students remain with their classmates for the rest of the day, and the teacher returns to the high school building.

*Curriculum compacting.* A student is preassessed to determine whether grade-level proficiency in a specific academic area has been achieved. The student then engages in advanced content and skills development in that “compacted” or another area, typically while remaining in the regular classroom.

*Dual enrollment.* The school system allows advanced students to enroll in higher level coursework when proficiency at grade level has been demonstrated. For example, the middle school student takes a high school math course, or the advanced high school history student takes a university history course during the school day.

*Credit by examination or prior experience.* A student’s instruction entails reduced amounts of introductory activities, drill, and practice, based on preassessment of the student’s mastery of the intended curricular standards. The school allows an advanced student to demonstrate proficiency in a course or year of curriculum in an academic area based on an end-of-unit or end-of-year test or by reviewing the student’s portfolio of work in the academic area. The student is then allowed to pursue more advanced coursework in that area.

*Advanced Placement (AP).* The AP program offers college-level coursework for students as early as middle school. AP exams allow students to earn university credit and/or advanced university standing based on the examination score.

*International Baccalaureate (IB).* Advanced students may participate in the IB program, taking the corresponding university-level curricula. At the end of high school, the students complete an international examination, receiving advanced standing and course credits upon matriculation to university.

*Grade-based acceleration.* These strategies typically shorten the number of years a student spends in the K–12 system.
a student is placed in a higher grade level than is typical given the student’s age on a full-time basis for the purpose of providing access to appropriately challenging learning opportunities. Grade-based acceleration is commonly known as “grade skipping,” but it can include other means to shorten the number of years a student remains in the K–12 school system (Rogers, 2004; Southern & Jones, 2004b). The exception is early entrance to kindergarten, which does not shorten the number of years the student spends in the K–12 system but shortens the wait time to start school.

**Examples of the forms (and types) of grade-based acceleration.** The forms of grade-based acceleration include early entrance to school, whole-grade acceleration (“grade skipping”), grade telescoping, and early entrance to college.

**Early entrance to school.** The main type of early entrance to school is early entrance to kindergarten. However, in some districts, it is possible for students to skip kindergarten and enter first grade at a younger than typical age. An example is a child who can read independently and is socially similar to typical 5-year-olds is admitted to kindergarten, even though the child’s fifth birthday won’t be until the end of the school year. This intervention shortens the waiting time for a student to start school, and in this regard is a similar form of acceleration to early entrance to college.

**Whole-grade acceleration.** One type of whole-grade acceleration occurs when a first grader, who has completed first grade, is placed in a third-grade classroom (rather than a second grade classroom) on a full-time basis at the beginning of the next school year. Another type occurs when a fifth-grade student completes the fall semester and is placed in the sixth grade at the start of the second semester of the same school year.

**Grade telescoping.** A group of advanced students is accelerated through more than one year’s curriculum in one year in all academic areas, such that 3 years’ curriculum are completed in 2 years’ time, or if at high school, 4 years are completed in 3 years’ time. Students fulfill credit requirements and graduate early.

**Early entrance to college.** There are multiple ways that students can be admitted to college early. These types of early entrance to college include, but are not limited to:
• An advanced student is granted a diploma after spending only five semesters in high school by accumulating credits on an accelerated basis through dual credit coursework taken while in middle school and by satisfying some high school graduation requirements by completing “educational options” rather than traditional courses. The student then enrolls in college as a full-time student.
• An advanced student leaves high school without the traditional diploma and enters a full-time university degree program.
• The student can participate in an early entrance to college program.

Research Support for Acceleration

As an educational intervention, acceleration is decidedly effective for high-ability students. The research support for acceleration that has accumulated over many decades is robust and consistent and allows us to state confidently that carefully planned acceleration decisions are successful.

Both grade-based and content-based acceleration are effective interventions in academic and social-emotional domains for high-ability students. Grade-accelerated students generally out-perform their chronologically older classmates academically, and both groups show approximately equal levels of social and emotional adjustment (Assouline et al., 2003; Colangelo et al., 2004; Kulik, 2004; Kulik & Kulik, 1992; Lipscomb, 2003; Sayler & Brookshire, 1993; Southern & Jones, 1991). To be clear, there is no evidence that acceleration has a negative effect on a student’s social-emotional development.

Some educators are reluctant to accelerate a student because they are concerned about long-term outcomes. However, longitudinal research has demonstrated that accelerants attain advanced degrees, produce scholarly works, and contribute professionally at rates well above societal baselines (Lubinski, Benbow, Webb, & Bleske-Rechek, 2006; Lubinski, Webb, Morelock, & Benbow,
2001). In follow-up interviews, the students indicated they wished they would have had more acceleration opportunities while in the K–12 setting (Lubinski et al., 2006; Lubinski et al., 2001).

The review of acceleration research presented in A Nation Deceived (Colangelo et al., 2004) provides the necessary supporting evidence for our recommendations for developing an acceleration policy.

Recommended Elements of an Acceleration Policy

Each school district should have a written acceleration policy stating that acceleration is an appropriate and effective intervention for select highly able students who have demonstrated high performance in one or more academic areas. In this section, we recommend 17 elements in five key areas that can help schools develop a comprehensive, consistent, and research-based policy.

The National Work Group on Acceleration recognizes that inconsistencies may exist between the guidelines we offer for acceleration policy development and existing state or local policies. One salient example is early entrance to kindergarten. The National Work Group on Acceleration suggests that highly able young children be considered for referral for early admission to kindergarten. Yet 13 states (and many local districts) have policies that do not permit this form of acceleration. We recommend that these discrepancies be addressed in conversations between the relevant stakeholders, keeping in mind the best interests of the child and the research evidence. Education policies are malleable, and policy makers should be open to the dynamic evolution of policies to best serve students.

Elements of an Acceleration Policy

This section provides guidelines in five key areas for components of an acceleration policy.
The policy is characterized by accessibility, equity, and openness. Specific recommended elements of a policy to meet accessibility, equity, and openness criteria include the following:

- **Access to referral for consideration of acceleration is open to all students.** A policy should not limit access to referral for consideration of accelerative curricular modification based on gender, race, ethnicity, disability status, socioeconomic status, English language proficiency, or school building attended. The policy shall be applied equitably and systematically to students referred for acceleration.

- **All student populations are served.** The acceleration policy should be comprehensive in addressing acceleration for all grades, K–12, and all students who demonstrate advanced academic ability in one or more content areas, including students who are English language learners (ELL), at risk, of low socioeconomic status, profoundly gifted, and/or twice-exceptional. Profoundly gifted students are those whose ability scores place them at the highest percentiles. Because these students are so rare, they require special attention when discussing appropriate educational interventions. Twice-exceptional students are those who are gifted and who have a cognitive, social, or behavioral disability; they, too, require special attention.

- **Student evaluation is fair, objective, and systematic.** A fair, objective, and systematic evaluation of the student should be conducted using the appropriate instruments for the form of acceleration being considered. When evaluating English language learners, appropriate instruments should include those in the student’s heritage language.

- **Parents or guardian(s) are allowed open communication about the policy and procedures.** Written consent is required from parents or legal guardian(s) in order to evaluate the referred student for possible acceleration placement. All students who have been referred, and for whom consent has been obtained, should receive an evaluation from professionals in the district. Parents or legal guardian(s) should be informed of the evaluation results in a timely
manner (we recommend within 10 days). A comprehensive written plan for the acceleration of recommended students should be developed, a copy of which should be provided to the student’s parents or legal guardian(s).

- The community has ready access to the policy document and procedure guidelines. Community access includes making the policy available in the language(s) served by the school. The acceleration policy and procedures must be easily accessible to the community. The acceleration policy and referral forms should be available upon request in the language(s) served by the school. Parents should receive this information in writing and in their heritage language. The administration and school staff should be instructed on an annual basis to assist the parents and students with the referral process.

The policy provides guidelines for the implementation of acceleration. Specific recommended elements of a policy that provides guidelines for the practice of acceleration include:

- The categories, forms, and types (where appropriate) of acceleration are specified. The two categories of acceleration, grade-based and content-based, their specific forms (e.g., telescoping, curriculum compacting), and types (where appropriate) should be part of a school’s acceleration policy.3

- The entire process to obtain acceleration services is detailed in the policy. The process of implementing acceleration includes referral and screening, assessment and decision making, and planning.

- Acceleration decisions should be made by child study teams, not individuals. An acceleration policy should be informed by research-based best practices, not personal opinions or anecdotal evidence. A common impediment to acceleration occurs when acceleration decisions are made by one person, a gatekeeper, who may harbor negative personal views about acceleration (Southern & Jones, 2004a). A child study team, which should include experts in gifted education, should consider individual acceleration cases,
and with the use of valid and reliable instruments to guide the discussion, decide on the form of acceleration needed.

- The child study team creates a “Written Acceleration Plan.” The child study team should appoint a staff member of the school to oversee and aid in the implementation of the “Written Acceleration Plan.” The district should retain a copy of the student’s plan to help assure that future opportunities specified in the plan are provided and that the student does not run into obstacles in subsequent years of school (such as when a student who is accelerated by continuous progress requires curriculum from two different schools).

- The policy specifies that the acceleration process include a monitored transition period within which decisions can be reversed. If a student is recommended for accelerated placement, the child study team should establish an appropriate transition period. We recommend that the student’s transition be evaluated no later than 30 days after the placement, and sooner if there are concerns about the placement. A staff member of the school should monitor the student’s adjustment during the transition period.

   Within the time specified for the transition period, the parent or legal guardian may request in writing an alternative placement. The administrator should bring such proposals before the decision-making team, who will be responsible for issuing a decision within a specified number of days (we recommend a decision within 10 days) of receiving the request. If the acceleration plan is modified, the “Written Acceleration Plan” should be updated. During this time, the parent or legal guardian(s) may request, in writing, the discontinuation of the acceleration program without any repercussions.

The policy provides guidelines on administrative matters to ensure fair and systematic use of accelerative opportunities and recognition for participation in those accelerative opportunities. Specific recommended elements of a policy that provides guidelines on administrative matters include the following:
• **Short-term needs are addressed.** An acceleration policy should provide guidance for issues in the short term, which include, but are not limited to:
  o specifying which grade level state achievement test the student should take, and
  o allowing for flexible transportation arrangements should a student need to travel between buildings.

• **Long-term needs are addressed.** An acceleration policy should provide guidance for issues in the long term, which include, but are not limited to:
  o providing guidance throughout K–12 to make sure that students will be allowed to maintain their accelerated standing,
  o working with the district to discuss distance learning options,
  o indicating accelerated coursework on a student’s transcript, and
  o determining the student’s class rank.

• **The process of awarding credit to students is specified.** There are multiple considerations when specifying how students will be awarded credit, including:
  o whether a middle school student receives middle school credit for courses taken at the high school (or college level),
  o whether a high school student receives high school credit for courses taken at the college level, and
  o whether a student receives credit for demonstration of subject-area competency outside of or in combination with completing hours of classroom instruction. Alternative credit pathways may include, but are not limited to:
    a. “Testing out” of a course or part of a course by attaining an established minimum score on an approved assessment instrument;
    b. Demonstrating prior mastery through the presentation of a portfolio of relevant student work;
c. Successfully completing a program of independent study based on an approved learning contract; and

d. Successfully completing a flexibly paced distance learning program addressing content comparable to the traditional course.

The policy provides guidelines for preventing nonacademic barriers to the use of acceleration as an educational intervention. Specific recommended elements of a policy that provides guidelines for preventing nonacademic barriers to the use of acceleration include the following:

• Extracurricular opportunities, especially interscholastic sports opportunities, should not be withheld or denied to students who are accelerated. For example, a middle school student who receives high school credit should not have any reduction of sports eligibility. We recommend that a conversation be initiated between gifted education experts in the area of acceleration and the governing board for interscholastic activities to review the impact of the current rules and policies on students participating in content acceleration.

• Use of acceleration should not negatively affect school funding. The appropriate agency should review school funding formulae to identify benefits and disincentives to appropriate use of academic acceleration.

The policy includes features that prevent unintended consequences. Specific desirable elements of a policy that proactively works to prevent unintended consequences include the following:

• An appeals process should be specified for decisions made at any step during the process. An appeals process, including procedures for appealing decisions and the time limitations on starting an appeal, should be specified. We recommend that the appeals process is specified in writing and accessible.

• The acceleration policy should be regularly evaluated on its effectiveness. The acceleration policy should include recommen-
Developing an Acceleration Policy

Recommendations for how to evaluate the effectiveness of the policy itself and its effectiveness in successfully accelerating students. The policy should provide recommendations for the point at which the policy’s effectiveness is evaluated (e.g., a committee should be convened once a year to review success of the policy as well as unintentional barriers to the use of acceleration; see the Appendix for a checklist of the recommended elements of an academic acceleration policy).

Implementing Acceleration

The National Work Group on Acceleration recommends that an acceleration policy provides guidance on implementing acceleration and supports the use of objective and comprehensive decision-making instruments. We provide guidelines for implementing acceleration from the Iowa Acceleration Scale (3rd ed.; IAS-3; Assouline Colangelo, Lupkowski-Shoplik, Lipscomb, & Forstadt, 2009), a guide for making decisions about grade-based acceleration. The suggestions we offer for implementing acceleration come from or are largely influenced by the IAS-3 Manual. The recommended elements of an acceleration policy can be broken down into three broad areas: referral and screening, assessment and decision making, and planning. Implementation procedures shall not disproportionally limit access to accelerative curricular modification based on gender, race, ethnicity, disability status (including twice-exceptionality), socioeconomic status, English language proficiency, or school building attended.

Referral and Screening

Referral for acceleration is a separate process from referral to a school’s gifted program. Students who are referred for acceleration will not necessarily be part of a school’s gifted and talented program because the school may not have a gifted and talented program, or the student may not qualify for the program if the school uses composite test scores for acceptance into the gifted program.
Students who should be considered for evaluation for academic acceleration can be referred to a school administrator by any source, including but not limited to the student, teachers, administrators, school psychologists, school counselors, parents, and other students. Referral should be open to many sources so that one person does not serve as the gatekeeper for referral recommendations.

Students scoring at or above predetermined levels (e.g., the 95th percentile) on regularly administered state norm-referenced tests should be automatically referred for consideration for acceleration. The student’s score profile, rather than the composite score, should be considered, so as not to bias the procedure against students who have an uneven pattern of scores and who are likely candidates for subject-matter acceleration.

The screening procedure should be applied equitably and systematically to all referred students. If, after a clear explanation of the advantages and disadvantages of acceleration, the student expresses that he or she is not interested in acceleration, then the process should not proceed further. The possibility of consideration for referral for acceleration should be possible at a later date.

Candidates for early entrance to kindergarten are typically within one year of the cut-off age recommended by state policy (Colangelo, Assouline, & Lupkowski-Shoplik, 2004). Bright young children who are ready for more academic challenge but are not necessarily ready for success in a school system might consider alternative or nontraditional school settings. A preschool teacher well-informed about gifted education issues might be able to meet the needs of such a student. An assessment by a psychologist may provide useful strategies for the student and family (although not all schools accept results from assessments by independent psychologists).

Ideally, a student will be assessed for acceleration in the spring, and, if recommended, participate in appropriate transition activities prior to placement in the advanced grade or content at the beginning of the next school year. The needs of the student should dictate when acceleration decisions are considered. Local practices should determine how many days prior to the start of
the school year or second semester an acceleration referral and
evaluation should be made.

Assessment and Decision Making

School districts are expected to conduct a fair, objective,
and systematic assessment of the student using the appropriate
instruments for the type of acceleration being considered for the
student. When assessing English language learners, appropriate
instruments may include those in the student’s heritage language.
The district should take care to ensure that assessment instru-
ments are valid and reliable, and that the instruments measure the
factors related to success with acceleration. Inability to pay for
any tests related to the evaluation, such as ability tests conducted
by an independent psychologist, should not exclude families or
students from consideration. Indeed, it is precisely because some
students are at risk of exclusion for consideration of acceleration
that an objective policy should be implemented.

A child study team should consider cases of whole-grade
acceleration and use valid and reliable instruments to guide the
discussion and decide on placement. In an ideal child study team,
at least one person is familiar with the research and best prac-
tices of gifted education and acceleration. A representative with
expertise in language acquisition should be a team member to
guide placement decisions when the student is an ELL. A repre-
sentative with expertise in twice-exceptionality should be a team
member to guide placement decisions when the student is twice-
exceptional. The issue of assembling a child study team should not
become a burden, nor should acceleration decisions be delayed
if a team is unable to have all recommended members present,
although a process for obtaining input from team members who
cannot be present should be in place.

The school administrator should convene the team comprised
of the following people, if possible, to discuss whole grade accel-
eration for a student:

• administrator,
• parents or guardians,
• current teacher,
• receiving teacher(s) (the teacher(s) from the next grade),
• talented and gifted teacher,
• school psychologist,
• school counselor,
• a representative with expertise in language acquisition when the student is an English language learner,
• a representative with expertise in twice-exceptionality when the student is twice-exceptional, and
• any other parties who may have knowledge beneficial to the decision-making process.

As part of the information gathering stage, the student being considered for acceleration can be consulted, depending on the student’s age and willingness to participate. (The student should not participate in the child study team’s discussion of the student.)

A child study team also should be assembled to consider cases of content-based acceleration. Because content-based acceleration does not involve a student’s full-time placement with older classmates, there may be fewer concerns about social and emotional development. Because of the less extreme nature of content acceleration, the child study team need not be made up of as many members as the team assembled for discussions of whole-grade acceleration. Members of a child study team for content acceleration should include the current content-area teacher, the receiving teacher for the content area, the parent, the student, and possibly other teachers and/or a school counselor to assist with initial adjustment issues.

Planning

A comprehensive written plan for the decision should be developed and provided to the parent or legal guardian of the student. The child study team should appoint a staff member of the school to oversee and aid in the implementation of the written acceleration plan and the transition process.
The child study team should establish an appropriate transition period for the accelerated placement. We recommend that the student’s transition be evaluated no later than 30 days after the placement, and sooner if necessary.

During this time, the parent or legal guardian may request, in writing, the discontinuation of the acceleration program without any repercussions. Within the time specified for the transition period, the parent or legal guardian may request an alternative placement in writing. The administrator should bring such proposals before the decision-making team, which will be responsible for issuing a decision within a specified number of days (we recommend 10 days) of receiving the request. If the acceleration plan is modified, the written plan should be modified accordingly and a new transition period determined.

The accelerated placement of the student should become permanent at the end of the transition period. Once the plan becomes permanent it should be entered into the student’s permanent record.

Policy Evaluation Factors

One factor in the evaluation of the policy might include an assessment of the accelerated student’s academic performance. Research demonstrates that whole-grade accelerated students typically score above the mean, and often score well above the mean, in the accelerated grade level, meaning that the accelerated student is outperforming older peers (Assouline et al., 2003; Wells, Lohman, & Marron, 2009).

The expectation for the student’s long-term academic success is discussed by Assouline et al. (2009):

Accelerated students should be expected to achieve, relative to their new grade peers, at a high level that is generally comparable to their performance in the previous grade. Such students are typically among the top 10% in a class, and they should be expected to remain in the top 10% throughout their academic careers. The difference,
following acceleration, is that these students will likely find it more of a challenge to attain a similar level of excellence. (p. 5)

A second factor in the evaluation should include the student’s social and behavioral adjustment. Acceleration may attenuate social and behavioral issues for some students, but acceleration is not a panacea. Acceleration should either have a positive impact on social and behavioral adjustment or maintain the student’s same level of (appropriate) social and behavioral adjustment. Acceleration should not negatively impact social and behavioral adjustment. Receiving teachers should help identify likely peers for the incoming student, and counselors should provide support in study skills and social coping when necessary.

A third factor to consider is the dosage of acceleration: Does the accelerated setting provide enough academic challenge for students? A few students may need an additional year of acceleration. Some students will need content acceleration to provide curriculum beyond what is offered in the accelerated setting. Therefore, if the level of acceleration is not sufficient, the policy needs to allow for the consideration of additional acceleration.

Concluding Comments

The members of the National Work Group on Acceleration developed this document to assist schools in writing and modifying an acceleration policy that adheres to research-based best practices and is suited to local needs. These guidelines for policy development should encourage the systematic adoption and practice of acceleration in schools across the nation.

There are many barriers to acceleration, some of which we have reviewed in this document. For example, some states and local education agencies have absolute age requirements for entering school. Others have curriculum requirements tied to specific grade levels or prerequisites for certain courses/programs that are so specific in policy that they tie educators’ hands.
Additionally, colleges and universities may present barriers by arbitrarily limiting participation of accelerated students in dual enrollment programs. In some states, students aren’t allowed to take a state graduation test until the spring of the sophomore year. In these states, colleges and universities require students to have passed the graduation test before enrolling in their dual enrollment programs. In effect, this locks students out of college-level courses until their junior year. When these barriers can be removed, students are in a better position to receive the educational opportunities and experiences necessary for their personal and academic growth.

Endnotes

1 ELL enrollment in the United States has grown by 57% over the past 13 years, compared with less than 4% for all other student populations (Flannery, 2009). ELLs account for 10% of the total student population, representing more than 5 million students. There are students within this linguistically and culturally diverse group who have advanced academic achievement and cognitive abilities that exceed those of grade and age peers. Academic acceleration should be a highly valued program option for the schools these students attend.

2 Some districts use a student evaluation model known as Response to Intervention (RtI), which was developed in the late 1970s as an alternative system for identifying students with learning difficulties. RtI is based upon the premise that all students should be screened to determine whether more intensive interventions are necessary, and is being promoted in some districts as a means to identify students for gifted and talented services such as acceleration.

3 The omission of guidelines for content-based acceleration in elementary and middle schools is notable. Many states have guidelines relating to Advanced Placement (AP), dual enrollment, or other forms of acceleration at the secondary level, but these guidelines often lack uniformity and consistency in the opportunities offered to students and ignores the concept of curriculum articulation (i.e., the necessary prerequisite coursework to
enroll in AP courses). Some guidelines have unreasonable age or grade requirements (such as not allowing students in 10th grade or below to enroll in AP courses).
